IN THIS EDITION:

* +FCC proposes to end Novice, Tech Plus
* +FCC proposes other Amateur Radio rules changes
* +ARISS delegates plan for ham radio in space
* +Wisconsin hams respond to flooding
* +FCC denies Checkpoint Systems petition
* FCC sequential call sign update
* Solar update
* IN BRIEF: This weekend on the radio;
* Vanity update; WSWSS VHF+ Conference;
* Hams help MS bikeathon; Hams track down
* errant marine transmitter; KD4HGU honored
* for public service; WB0EJJ honored

+Available on ARRL Audio News

FCC STREAMLINES AWAY NOVICE, TECH PLUS TICKETS

The FCC has proposed to phase out the Novice and Technician Plus class licenses, leaving just four amateur license classes in place--Technician, General, Advanced, and Extra. The Commission also has asked the amateur community to express its opinions on Morse code requirements for licensing and testing, but offered no specific changes. And the FCC proposed to permit Advanced class licensees to administer amateur exams up through General class. The proposals were among several suggested rules changes and invitations to comment contained in an FCC Notice of Proposed Rulemaking, WT Docket 98-143, made public August 10.

Given the December 1 comment and January 15 reply comment deadlines, it's likely that the issues the NPRM raises won't be resolved until well into next year.

In proposing to phase out the Novice and Tech Plus tickets, the FCC pointed to what it called "an unnecessary overlap between the Novice, Technician, and Technician Plus," and asserted that Technician and Tech Plus operators "predominantly" use FM and packet on VHF and UHF. The FCC said Novice applicants last year numbered fewer than 1000, while there were nearly 21,500 Technician applications.

Under the FCC plan, Novice and Tech Plus licensees would retain current operating privileges, but no new Novice or Tech Plus licenses would be granted. For examination purposes, current examination elements 2 and 3A would be combined into a new element 3A. For administrative purposes, the FCC would combine the current Technician and Tech Plus databases into a single Technician database.

The proposal would eliminate the 5 WPM code test, Element 1A, as a required element for any class of license, while retaining references to it elsewhere in the rules. This has left hams wondering exactly what the Commission intends. The elimination of the Novice and Tech Plus license classes and Element 1A as a requirement appear to effectively raise the bar for most future applicants wanting HF operating privileges, unless the FCC ultimately reduces Morse code requirements.

The FCC did not propose to change any operating frequencies or license privileges for amateurs. However, the FCC does seeks comment on the disposition of the current Novice HF bands, which carry a 200-W output power limit for all licensees. The FCC invited comment on whether it would be "appropriate" to delete the Novice bands and the power restrictions on higher-class licensees and permit Novices to operate CW anywhere on 80, 40, 15, and 10 meters at 200 W output.

The FCC opened the door to comments on all aspects of Morse code testing from the amateur community. In particular, the Commission said it wants to know if hams prefer the current three-level system or would like to see it reduced to a one or two-tier system--and, if so, at what required speeds. The FCC asked whether hams would be willing to trade a reduction in Morse code requirements for additional written elements on newer digital technologies "which, in part, are replacing the Morse code." And, the Commission asked whether it should consider specifying Morse code examination methods, such as fill-in-the-blank or one minute of solid copy, instead of allowing VEs to determine the testing method.

FCC PROPOSES OTHER AMATEUR RADIO RULES CHANGES

In its Notice of Proposed Rulemaking, WT Docket WT 98-143, the FCC seeks comments on how to deal with potential abuses of the current disability waiver for higher-speed Morse code tests. In its proposed rules, however, the FCC has altogether deleted current language regarding a physician's certification to waive the 13 or 20 WPM Morse requirement. In RM-9196, the ARRL had asked the FCC to require anyone applying for an exemption pursuant to a doctor's certification to first attempt the higher-speed test before examination credit could be given. The League also asked that VECs have access to relevant medical information from the certifying physician. The FCC said the ARRL's proposal would place "an unfair burden on examinees" and

raised serious privacy and confidentiality issues.

The FCC went along with an ARRL petition and proposed allowing Advanced class hams to be eligible to prepare and administer license examinations up through General class under the VE program. The Commission said the change would permit greater testing opportunities for hams. The FCC also invited comments on whether it should change written examination requirements "to provide VEs and VECs additional flexibility in determining the specific contents of written examinations."

Referring to yet another ARRL petition, RM-9150, the FCC invited comments on how it can improve its Amateur Radio enforcement processes. The FCC applauded the ARRL "for its creative thinking" in that petition, but said the specific proposal was "inconsistent" with the current statutory role of administrative law judges. The FCC raised the possibility of encouraging complainants to include a draft order "to show cause to initiate a revocation or cease and desist hearing proceeding." The FCC said it also wants to hear how it can better use the services of the Amateur Auxiliary in beefing up enforcement.

The FCC proposed to phase out Radio Amateur Civil Emergency Service, or RACES, stations by not renewing their licenses. No new RACES licenses have been issued since 1980, and only 249 valid licenses remain. The FCC said RACES stations no longer are needed because any amateur station that has been properly registered with a civil defense organization has the same privileges as a RACES station.

The FCC also used the occasion to clarify the definition of "power" as used in the RF exposure table in Section 97.13(c)(1). The FCC said it refers to peak envelope power (PEP) input to the antenna. It also made clear that no one holding an FCC-issued ham ticket may apply for a reciprocal permit for alien amateur licensee.

Without comment in the NPRM text, the FCC also appears to have eliminated the 365-day time limit for a Certification of Successful Completion of Examination (CSCE) to remain valid. The current 365-day limit remains in proposed wording in Section 97.9(b), Operator license, however.

The FCC is expected to issue an erratum to correct outright errors in the NPRM, but it has no plans to clarify the Commission's intent on individual issues.

The FCC set a longer-than-normal comment period. The deadline for comments is December 1, 1998. The deadline for reply comments is January 15, 1999. The FCC will accept electronic comments via the Internet at http://www.fcc.gov/e-file/ecfs.html.

A copy of the complete NPRM has been posted on the ARRLWeb page, http://www.arrl.org. The FCC NPRM also can be downloaded from the FCC Web site in WordPerfect 5.1 and text versions as http://www.fcc.gov/Bureaus/Wireless/Notices/1998/fcc98183.wp or http://www.fcc.gov/Bureaus/Wireless/Notices/1998/fcc98183.txt, respectively.

An article and an editorial in the October issue of QST will explore the FCC's NPRM and its implications in greater detail.

ARISS DELEGATES DISCUSS HAM RADIO IN SPACE

Amateur Radio delegates representing seven of the eight countries involved in Amateur Radio aboard the International Space Station (ARISS) met in England in late July to continue plans to establish the first permanent Amateur Radio presence in space. The session, chaired by Space Amateur Radio EXperiment (SAREX) Working Group Chairman Roy Neal, K6DUE, was held July 29-31 in conjunction with the AMSAT-UK 1998 Colloquium, held at the University of Surrey.

On hand or patched in via a teleconferencing hookup were 16 representatives from the US, Japan, Italy, Germany, Canada, the UK, and Russia. The representative from France was unable to attend because of a prior commitment.

ARRL Educational Activities Department Manager Rosalie White, WA1STO, represented the League and the SAREX Working Group. Observers at the sessions included AMSAT-NA President Bill Tynan, W3XO; former US astronaut Ron Parise, WA4SIR; and RSGB President Ian Kyle, GI8AYZ. IARU satellite frequency coordinators from Regions 1 and 3 also were on hand.

ARISS delegates formed two permanent working groups. The ARISS Hardware Group, chaired by Lou McFadin, W5DID--perhaps best known for his involvement in the Phase 3D project--is charged with designing and building space station equipment. The ARISS Administrative Group, chaired by Frank Bauer, KA3HDO, is charged with setting up ground rules for operation, finding financing, and handling all other administrative details.

Bauer, who's NASA Vice President of Human Satellite Programs and a SAREX Working Group member, said ham radio will be part of the ISS right from the start of construction. "What we're going to do is develop this in stages," he said. The first crew, aboard STS-88 at the end of this year, will have 2-meter hand-held and packet capability coupled with an antenna system that will be a cooperative effort of the Italian and Russian teams. A three-person crew will attach the trusses and begin building the ISS.

The ISS service module, due to be launched next summer, is the section of the ISS in which astronauts and cosmonauts will live during construction. An interim station for the first ISS crew at that point would add 70-cm capability and a German-designed "digitalker," and eventually a transportable station that could include SSTV and full-duplex VHF/UHF. The first crews to actually live aboard the ISS will graduate to mobile-type transceivers.

Bauer says the final ISS equipment complement is still in the conceptual stages but likely would include all-mode capability from 10 meters up through 13 cm.

Surrey ARISS delegates also discussed time-sharing and scheduling of the ham stations, crew training, educational opportunities, fund-raising, call signs, and frequencies. Details on these issues remain to be decided.

Neal credited SAREX Working Group Principal Investigator Matt Bordelon, KC5BTL, for "a superb job of lining up the NASA/ISS officials and channels for what's about to happen." A key player on the ARISS team, Bordelon, is scheduled to travel to Russia soon to work out details of the station installation aboard the ISS service module with Sergej Samburov, RV3DR, the Russian delegate.

Neal said he was gratified to see the plans coming together to put Amateur Radio aboard the ISS. "These meetings have gotten the worldwide Amateur Radio family on track," he said. "Amateur Radio is now getting ready to fly onboard!"

White said the most significant aspect of the session came on the afternoon of the second day, was when countries stepped forward to accept responsibility for various aspects of each Amateur Radio station. "For instance, for the interim Amateur Radio station, the US took responsibility for the packet module, adapter module, radio, and associated cables," she said. White said Germany agreed to build the digitalker, and to work with Russia to develop the antenna feed-through system. Italy will design and fabricate the antennas, and Russia will install the RF cables and antennas.

For the transportable setup, the US will handle the packet TNC, equipment integration, and the NASA-required Safety Data Package, while Germany will design and build the system.

"The ARISS project will truly be an international project," said White. "It will be well worth our years of work, because each delegate believes ARISS is a wonderful resource for the Amateur Radio service and a great educational tool for our world's youth."

Russia said this month that it would meet its commitments to the ISS, despite its well-publicized economic problems. The ISS program is already a year behind because of delays related to Russia's money woes. In the US, NASA and White House budget officials have faced tough questioning about the space station project. The US share of the construction cost will be in excess of $20 billion.

WISCONSIN HAMS REACTIVATE FLOODED STATION TO ASSIST RED CROSS

Heavy rainfall August 6 caused severe flooding in southeastern Wisconsin. Four counties, Sheboygan, Milwaukee, Waukesha and Rock, were declared disaster areas. The floods put dozens of people out of their homes and shut down some roadways and bridges. A SKYWARN net was activated for the southeastern part of the state.

ARRL Emergency Coordinator Mike Musiel, K9SJ, of Cleveland, Wisconsin, says the floodwaters inundated the basement of the local Red Cross headquarters where the Sheboygan County ARC and ARES radio room was located. "As soon as the waters were safe, Larry Bahr, WB9FXQ, and I went in Thursday night (August 6) and recovered what equipment we could," he reports. Musiel said the radios could be salvaged, but the shack itself was totally out of commission.

Musiel says he and Rob Jacobson, KB9AFT, contacted the Sheboygan Red Cross and prepared to regroup. "Unfortunately, most of the Red Cross relief supplies were also in the basement," he said. He says he made up cables for the temporary station and, with help from Jacobson and Sky Borgenbagen, N9XRU, set up the temporary station at the Red Cross to assist the damage assessment teams in the field.

"I can not begin to describe the amount of loss thousands of people have lived through," he said.

The Red Cross damage assessment teams needed to canvass large areas of the city quickly, Musiel explained. "Hams tailed the damage assessment teams to handle questions from local residents. Most of the affected areas had no power, gas, or phone service," he said. Hams were able to get messages directly to Red Cross headquarters and respond to residents in a timely fashion, however. Musiel says he had a cell phone along, but the local cells were saturated with traffic. The hams were able to set up a mobile transceiver in crossband repeat mode so they could use H-Ts on low power and extend their battery life.

Musiel said the N9REH VHF machine in Sheboygan was out of service. Most traffic went through the AC9A UHF machine in Sheboygan, and the WE9R SCARC club VHF repeater in Plymouth.

Musiel said he was not certain how much longer ham radio help would be needed. "A number of hams were in the badly affected areas. I know some of them took heavy damage," he said. Additional volunteers arrived last weekend, he said. Among hams that assisted were KB9AFT, N9XRU, K9XJ, AA9LV, KD9TZ, KB9QPM, N9SVV, WB9FXQ, KB9GHE, K9JHK, KF9XZ, and K9SJ.

First Lady Hillary Rodham Clinton toured Wisconsin's Rock County on August 12 and announced the availability of federal aid for the four affected counties.--thanks to Jim Romelfanger, K9ZZ

FCC DENIES CHECKPOINT SYSTEMS PETITION

The FCC has turned down a bid by Checkpoint Systems, a maker of theft deterrent systems for stores, to raise the permissible radiated and power-line conducted emission levels of its products operating at HF. The Part 15 devices, known as electronic article surveillance or EAS systems, are located at store entrance and exit gates. The gates include a transmitter and receiver that can detect passive electronic tags attached to merchandise and trigger an alarm.

Last year, Checkpoint asked the FCC to be allowed to operate between 1.705 and 30 MHz at a maximum radiated emission level of 1000 uV/meter (measured at a distance of 30 meters), and a maximum conducted emission level of 3000 uV. Current rules permit a maximum radiated emission level of 30 uV/meter (measured at a distance of 30 meters) between 1.705 and 30 MHz, or 100 uV per meter between 1.705 and 10 MHz. The current conducted emission limit for such devices operating between 1.705 and 10 MHz is 250 uV.

In its comments, the ARRL opposed the Checkpoint petition arguing that it would result in increased interference to amateur HF operation. The League

also said Checkpoint had not provided any technical analysis of the potential for increased interference at the frequencies in question.

In a decision issued August 5, the FCC went along with the League, saying Checkpoint had not provided sufficient technical analysis to justify the requested tenfold increase in radiated emission limits. The Commission also said that Checkpoint had not justified its assertion that its EAS systems were in danger of being "drowned out" by other sources of radio noise.--FCC

FCC SEQUENTIAL CALL SIGN UPDATE (Best viewed using a nonproportional font)

The following is a list of FCC sequentially assigned call signs issued as of August 3, 1998. For more information about the sequential call sign system, see Fact Sheet PR5000 #206S or contact the FCC, 1270 Fairfield Rd, Gettysburg, PA 17325-7245; e-mail fccitd@fcc.gov.

SOLAR UPDATE

Solar savant Tad Cook, K7VVV Seattle, Washington, reports: Solar activity was up again last week in a big way. Average sunspot numbers were up by 42 points, and average solar flux was up over 32 points. The highest solar flux was on August 9 when it was 154.1. The last time the flux was this high was in early 1993.

August 14-16, look for solar flux to decline to 140, 135, and 130. Solar flux should go under 120 around August 20 and down to 110 around August 22, then increase to over 150 again after the beginning of September. The planetary A index was very high at 69 on August 12, and we should see high A index values indicating geomagnetic disturbances around August 19 and 20.

There is more good news concerning the SOHO satellite, which is used to observe the sun. The satellite has now recovered to the point that it is sending out some data, such as temperature readings.

With solar flux over 150 and fall soon upon us, strong 10 meter openings cannot be too far away. 15 meters should be stronger as well, now that the solar cycle seems to be moving up again.

Sunspot numbers for August 6 through 12 were 122, 127, 121, 155, 136, 144, and 137, with a mean of 134.6. The 10.7-cm flux was 138.3, 145, 146.8, 154.1, 149.2, 150.1, and 147, with a mean of 147.2. The estimated planetary A indices were 69, 28, 12, 4, 14, 9, and 10, with a mean of 20.9.

IN BRIEF

* This weekend on the radio: The ARRL 10 GHz and up Cumulative Contest (see June QST, page 87), the New Jersey QSO Party, the North American QSO Party (SSB), the SARTG RTTY Contest, the W/VE Islands Contest, and the SEANET Contest (SSB) all are on tap this weekend. See August QST, page 105, for more information. Just ahead: The TOEC WW Grid Contest, CW is the weekend of August 22-23. See June QST, page 87, for details.

* Vanity update: The FCC in Gettysburg reports it has processed vanity call sign applications received through July 9. This past week, 62 call signs were granted. Another 79 applications landed in the work in process (WIPs) stack. During July the FCC received 632 vanity applications, 527 of them electronically filed.

* WSWSS VHF+ Conference: The 50 MHz and Up Group of Northern California, Inc. and the Western States Weak Signal Society will hold the annual WSWSS VHF+ Conference October 3, 1998 at the Sunnyvale Hilton, Sunnyvale, California. The conference will have two presentation paths, one for general interest and one for technical specialties. Papers or presentations are being accepted at this time. Topics should be of general VHF+ interest or detailed technical content. Those interested in participating should submit a paragraph outlining content to Jim Moss, 862 Somerset Dr, Sunnyvale, CA 94087; e-mail n9jim@aol.com. See http://www.qsl.net/wb9ajz/wswss98 for more information.--AMSAT News Service

* Hams help MS bikeathon: Hams in New York and Vermont provided communication and route support for the annual bikeathon sponsored July 11-12 by the Multiple Sclerosis Society of Northeastern New York. The 150-mile trek from Saratoga to Ticonderoga (New York) and back took a scheduled detour through Vermont (by ferry). Nearly 30 hams from the Adirondack Amateur Radio Club, the Mountain Valley Amateur Radio Club, the Saratoga County RACES Association, Vermont ARES, and the Albany Amateur Radio Association--combined with Northeast Mobile Search and Rescue, the CVS Samaritan Van, and the New York Guard to assist with the fundraiser. The event attracted cyclists from as far away as Texas.--thanks to April Stack, K2ZCZ

* Hams track down errant marine transmitter: Hams in Florida recently helped to track down the source of a signal on marine channel 16, the one most

often used for emergencies and as a calling frequency. DEC Linda Mullen, AD4BL, reports that WA4IMC was able to find the offending transmitter "through a process of elimination" of reports from other amateurs monitoring the 156.80 MHz signal. Apparently, a sailboat operator had dropped a bag on his marine radio's mike. The signal remained on the air for several hours. "The Coast Guard was in a tizzy," AD4BL reports.--thanks to Nils Millergren, WA4NDA

* KD4HGU honored for public service: John P. Galaider, KD4HGU, has been honored by the Margate, Florida, City Commission for his long years of public service. At its regular City Commission meeting, Wednesday, July 8, 1998, Margate's Mayor, Joseph P. Varsilone, presented Galaider with a proclamation and plaque, proclaiming him as an Honorary Mayor of the City of Margate. The mayor spoke of the many public services provided by Amateur Radio operators. Galaider, 86, serves as a net control operator on the Southeast Florida Traffic Net. "John not only is an asset to the city, he is a good-will ambassador also, with his many ham radio contacts around the world," the mayor said. Attending the ceremony were ARRL Southern Florida Assistant Section Manager Chuck Baer, W4ROA, and Southern Florida Section Emergency Coordinator, Jim Goldsberry, KD4GR.--thanks to Ron Toller, N1RT

* WB0EJJ honored: Beryl Masters, WB0EJJ, received the American Council of the Blind's Lifetime Membership Award at the council's annual convention July 5 in Orlando, Florida. Masters, 79, was among 10 others getting the award. A few days after the event, Masters underwent knee replacement surgery and is reported to be recovering well. He's a member of the Heart of America Radio Club and is well-known as the founder and net control of Kansas City's Paul Revere Net, held each Saturday at midnight and rumored to be the longest-running 2-meter net in the US.--thanks to Larry Staples, W0AIB

==========

The ARRL Letter is published by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, W6ROD, President; David Sumner, K1ZZ, Executive Vice President.

Circulation, Kathy Capodicasa, N1GZO, e-mail kcapodicasa@arrl.org.
Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit the ARRLWeb page at http://www.arrl.org.

The purpose of The ARRL Letter is to provide the essential news of interest to active, organizationally minded radio amateurs faster than it can be disseminated by our official journal, QST. We strive to be fast, accurate and readable in our reporting.

Material from The ARRL Letter may be reproduced in whole or in part, in any form, including photoreproduction and electronic databanks, provided that credit is given to The ARRL Letter and The American Radio Relay League.

==>How to Get The ARRL Letter<==

The ARRL Letter is distributed directly from ARRL HQ only to elected League officials and certain ARRL appointees and to paid subscribers of the now-defunct hard-copy edition of The ARRL Letter. For members and nonmembers alike, The ARRL Letter is available free of charge from these sources:

* The ARRLWeb page (http://www.arrl.org/arrlletter/). This version of The ARRL Letter includes any photographs. (NOTE: The ARRL Letter will be posted as soon as possible after publication. Please be patient.)

* The HIRAM BBS: 860-594-0306. (NOTE: The ARRL Letter should be available via the HIRAM BBS no later than the Monday after the date of publication.)

* The ARRL Technical Information Server (InfoServer): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published every Friday). For example, to request The ARRL Letter file for Friday, January 3, 1997, you'd type "send ltr0103.txt". Then, on a separate line, type "quit". (NOTE: The ARRL Letter should be available via the InfoServer no later than the Monday after the date of publication.)

* The Netcom server, run by the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list".

* CompuServe and America Online subscribers, as a downloadable text file in the services' ham radio libraries.

YES!! We were just joking about that on the PARG mail list last night!

For 2 or 3 weeks how you have been imitating the PARG.ORG domain
& the Phantom's Amateur Radio Group even though no recognized
orginization recognizes (or has even heard of) your "Pottersfield ARG".

So Blake, why don't we continue this on rec.radio.amateur.misc?

So far, you're the only person that I have seen even suggest it is, or ever was. Procoders see it for what it *really* is, another very useful, simple and widely implemented mode that is quickly at the disposal of anyone who has the ambition to learn and use it.

Yeah, I know what you mean. At least I'm waiting to upgrade before getting on HF, and I use my callsign on here. I guess the rumphumpers must have some chicken dna mixed in with their imediate family's.

that's one of the reasons we need to have a fair percentage of the population (whatever that number is) in amateur radio so there's the stability in decision making that can occur when there's folks that know what's going on around to point out misunderstandings...

a small percentage of hams equals a good chance that the folks on the rule making side will have little contact with amateur radio and consequently not care as much if it lives or dies.

Don't you find it interesting that all that "trash" is on phone?
Palerider (and yourself) should come down and visit us in the lower
50 kHz of each band. It's quite pleasant down there!

>I used to work HF mobile, but it's got

Interact with your kids, instead. Sing songs with them, play number or
word games with them. You'll have plenty of years for ham radio in
the car after they've grown and left.

I need some advice from those who have "been there." Just about 2 weeks ago I took all of the written tests, and all of the code tests, and did as well as I expected, if not as well as I had hoped. Since I had only studied up to the advanced level, I passed everything up to that but failed extra. Then on the code side, I blew 20 wpm, then I blew 13 wpm, but passed 5 with no problem. So, I am now a fresh new Tech plus with a bunch of credits for further categories of license.
So what's the problem? The problem is that since I am limited to just a few CW bands in the HF region, I must perforce use CW. Unfortunately, there seem to be various formats and customs in use that I just don't know about. Also, the quality of CW from the computer speakers is vastly different from what comes out of my radio. I find that I can't seem to copy worth a damn from a live QSO, although I can get most of 13 wpm from the training program (Numorse) on the computer. I find that invariably I spend most of the time the other party is transmitting sitting stupid and thinking, "Why can't I understand this?" In a word, I am getting extremely frustrated with this, and frustration != fun.
The question becomes then, what to do? I will continue to listen to the code practice and try to make more QSOs, but there has got to be some kind of guide to the actual practices of CW and how the contacts run. And of course, other questions arise: How do I quickly tell someone to slow down? How do I break into a transmission to do so? How do you tell someone to piss off who has just broken into your QSO with a bunch of CQs? How many times will most people repeat, before they think "Forget this moron, how did he get licensed in the first place?" Obviously, I have a million of 'em...
I guess I can answer one question myself: the way to copy code better is to use it a lot, right? I listen to groups and generated QSOs on the computer almost every day, then try to make some live contacts. Now granted, I have only been licensed and transmitting for three days, but when does this become fun? I have had more fun studying for the tests than trying to make contact with folks via CW. (I know, a little strange, but I like studying...)

Anyway, I am not one of the no-code folks screaming about learning morse. I have spent the last two months working hard at it, and finding now the disappointing realization that I really am terrible. And it doesn't help that of the HF bands open to novice/tech plus, only two are halfway active. 80 meters is usually very quiet, and 10 meters is dead. I need to pass the higher speed tests to get access to the rest of the HF bands, but with this kind of performance it doesn't look likely. And finally, a recent financial semi-disaster has made more purchases, such

as VHF or UHF, unlikely. Hell, I wanted to talk to people in other countries anyway.

What I am not looking for as a response to this message is a bunch of idiots telling me ham radio is dead, or that CW has no justification. I have thought those matters through myself, and don't need any more opinions on them. Such messages will be ignored and trashed, so save yourselves (and me) the effort.
What I am looking for is advice, perhaps a "cyber elmer," if you will. I don't know any hams in the area, and likely won't meet any for a while. For all I know, what I really need is someone to say that it will get better. Everyone needs encouragement...

Thanks for listening. Any helpful replies are appreciated.

73,

Adam Adkins, KD5EYF

Typical CB'er........

>< Me and Polly> are going to have good skip every night just like the skip
between > <him and Billy Jack>. Hardy Har Har. <You gone. You history. You
relegated to > theNewsgroup weepers and creepers society. Ho Ho Ho. We be
the talkers, >you be the walkers. Hardy Har Har. We beat the beepers....you
be the weepers >and creepers. Ho Ho Ho. The "real" libnet said that. Hardy
Har Har. I pay the
>phone bill, dumb ass. I get to say what I want on MY rotation. Thems
the
>rules.>

Try using English, next time. "Me and Polly", "him and Billy Jack", "You gone,"
etc.
I'm sure that your "professors" at the clown college fall into hysterical
laughter at your lack of grammar and writing ability. I mean, really, stringing
together a bunch of insults among a load of babbling was hardly effective...
Maybe later in life, after you have learned to read, write, spell, and count,
you will have more success.
True, these are rudimentary skills that many of us "normal" people
take for granted that everyone has an easy time of mastering. But we
sometimes forget that there are "challenged" persons in this world who
find these things more difficult. If I had known, that this was your
case then I would have never read your post. I wish you
the best of luck in the emotional, and social struggles that seem to
be placing such a demand on you.

: > Whether *you* want to "hear" the other guy or not doesn't change the
: > fact that there are modes that *CAN* copy a signal that -YOU- can't hear.
: > Since I could print RRTY signals in the 1950s that were IN the noise,
: > then it certainly means that it can STILL be done. And those signals use
: > the spectrum more efficently than CW.

: So where's the news here???

Right, so what's the fuss all about???

Glad to see your back from your vacation(?). The NG has already picked
up some.

: The day that demand for spectral efficiency becomes the predominant feature
: of ham radio is the day that the FCC will be called upon to rewrite the rules
: of the ARS to reflect that fact. Certainly we haven't come to that, tho with
: all the easy licensing it could come sooner rather than later.

But Dick, a few weeks ago - the argument that CW was a narrow band -
energy conserving mode was *very* important as to why we all had to learn
it. It saved walking down the road to your neighbors house to charge your
batteries etc.

: The plain fact is still that CW mode is the most widespread mode in terms
: of availability, second only to the voice modes, in amateur radio stations
: worldwide. That fact alone means that it is a communications capability that
: should be preserved.

So stick it in a pickle jar and ..... ;-)

Depends upon what you call "preserved". If you mean -forced- on everyone
as a way to get a license, then it's not going to happen. If you mean
allowing people to make a free choice as to what mode they want to use
then by all means I'm for it. You make it sound like someone wants the
mode to disapear. (It's the -test-)

(Actually FM is probably the most used, followed by SSB and then (maybe)
CW. At least in the USA.)

[snip]

: Face it James......CW is gonna be around for awhile.

Of course it will. I never thought otherwise. That's why I proposed a
0/5/5 license structure.

: Dick W0EX

For me boredom was a big factor when practicing code. By getting on the air I was having fun and the hours flew by. My speed picked up without effort and the test was easily passed. But in those days there was no practice computers or multiple guess tests. Maybe this would apply only if you're affected by boredom.

There is nothing gentlemanly about your carrying on about a transmission mode that has many adherants around the world.

If you want to promote the many benefits CW/AM/FM/digital mode activity in the Amateur Service, go ahead - amateur radio will be the better for it.

On the other hand, if all you want to do is complain about SSB (which many people enjoy) and do nothing positive about promoting the other modes, then you should seriously think about handing in your amateur licence - we have enough whingers and knockers without you contributing to the melee.

Some people enjoy SSB. Anything you say or do will not change this one iota. Get a life and do something positive!

>Radio Randy

Humm,

The Kenwood TS850 is a very good rig and is totally solid state... no tune
but it does cost about $900 used.

But I do tune my amplifier to this day and learned on radios you have to
tune. In fact most HF amplifiers sold today require tuning. It's a good
thing to know and is easy. Also makes you able to operate almost any
station in emergencies if you get into the emergency communications part of
the hobby.

I'd stay away from the Kenwood 430 as it had slow switching and did not work
well on digital modes like Amtor.

I would emphasize the radio with what available money you have and then
build around it as you get into the hobby and more time to save up. Don't
skimp on the radio too much inorder to have lots of other gadgets at this
stage of starting into the hobby. I would do with out is a radio that has
the WARC bands, 30 meters, 17 meters, and 12 meters included.

My all time favorites that perform well are Icom 765, 735, Kenwood 940, 440
and 830 or even the well known 520 and 530's ($350+). The 830, 940 and 850
were very notable. If you want to go mobile someday then get a solid state

this time around and when you upgrade, use the old radio for your mobiling needs. You will save money in the long run and generally the 440 or 735 fit well into this category.

Good luck.
Have Fun

The bands don't have to be dead for CW NOT to get through. Just visit the Novice subbands sometime. You can tune down into the more elite bands and hear traffic, and you can tune up into the more elite bands and hear about gall bladder surgery. Then you hear these clowns on the newsgroup bemoaning the loss of the Novice ticket as the entry license into amateur radio.

>
>Why?

eliminating the code requirement won't swell the ranks. it WILL cause a bunch of technicians to upgrade to gain HF voice privileges so that will help equipment sales for a very short time. once you add 50,000 new technicians to the already overcrowded HF voice freqs there will be an outcry for more bandwidth ... and the only place that will come from is from the CW portions of the bands ...

so eliminating or reducing the code requirement won't "save" amateur radio or the amateur radio industry it will only prolong it for another decade or so and in the process push CW into ancient history....

for anyone who values CW this is unacceptable.

1247. Interesting Item in September QST

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-15 00:00:00 UTC
From: kc8jbo@aol.com
Message-ID: <1998081523330600.TAA23122@ladder01.news.aol.com>
Source record: 164610

This is an intersting article which appeared in September QST, pp. 57-58.

FCC UPHOLDS INITIAL DECISION TO DENY KV4FZ RENEWAL

Another step in the KV4FZ legal saga:
The FCC has upheld the supplemental initial decision of an adminisstrative law judge to deny the application of Herbert L. Schoenbohm, KV4FZ, to renew his Amateur Radio licenses, ALJ Edward Luton had found that Schoenbohm, of Kingshill, Virgin Islands, had "engaged in misrepresentation and lacked candor" in testifying about his felony telephone toll fraud conviction and his solicitation of ex parte presentations. Schoenbohm was convicted in federal court of fraudulently using a counterfeit access device to obtain long-distance telephone service.
The FCC also said he solicited others, using Amateur Radio, to make ex parte presentations on his behalf, in violation of FCC rules. The FCC said his behavior, in combination with his fraud conviction, justified nonrenewal of his ham ticket.
Schoenbohm has maintained that the FCC should renew his license because his conviction was several years ago, his sentence light, and he's had a spotless record and has been fully rehabilitated. The FCC disagreed, however, saying that Schoenbohm "has not demonstrated that he posesses the basic character traits of truthfulness and reliability that are essential to licenseeship."
Schoenbohm's license expired in 1995, and his call sign no longer appears in the FCC database. However, he has been allowed to continue operating as KV4FZ until his appeals are exhausted.

Ok guys:

I expected a LOT of feedback on that post. I'm not condemning radios with tube finals, hell, I still own an FT-101ZD and am currently using IT in my shack instead of the 735. But then, I've been around tube rigs for awhile now and, other than tube replacement cost, am quite comfortable with them.

There are a number of advantages to solid state rigs including general coverage receivers and no tuning requirements. These are coupled with lower power requirements while running mobile (you CAN'T argue THAT) and a compact design. Let's not forget memory channels (No, I know you can plug crystals into an old radio, but why?)

You guys can talk all you want about the virtues of tube finals but I would STILL insist on a solid state rig for our club station. That way, all new hams (even the ones who can't program the local repeaters in that new handheld) can operate with a minimum of assistance.

Besides, I've NEVER owned a tube rig that could run 100 watts on RTTY like my 735 can.

Forty years ago only half as large a percentage of the US population were radio amateurs and yet today we have at our disposal considerable more spectrum at HF than we had at that time. Looks like your figures are headed in the wrong direction, away from reality.

One more time, it must be said--the spectrum above 50 mHz is where the actual threat to our allocations lies. Yet all the smoke, mirrors and noise WRT the code and it's testing applies to the spectrum BELOW 50 mHz. The No-code Techs already have FULL privileges in the threatened region. So how can you call your agenda credible??? No rational person who does his own thinking could see it that way.

All this leaves us wondering where you are **really** coming from. Are you a bitter leftover from Incentive Licensing who couldn't have it his way then and still insiste on trying, are you completely hung up on your digitial projects to the total exclusion of everything and everyone else, or do you have some "special deal" hidden away that you are promoting but don't want publicised? One of those has got to be close.

There's a lot of bright engineers out there, a lot of whom are hams. But for some reason only three or so of you show up here as rabid no-coders trying hard to confuse the unknowing and doing your best to bully the rest of us. It'll be a tough job.

Fellow Hams, be forewarned! There is a Ham who posts to this group who claims to be a 14 yr. Navy Vet. He was a Naval Reserve enlistee and as such served only two (2) weeks per year on a real Navy vessel. He claims to be suffering from Post Traumatic Stress Disorder from a tour in Saudi Arabia. This is bogus (as in LIE) and is only self-aggrandizement....he never left the galley! The only real stress this Ham suffers from is derived from hiding his whereabouts from his numerous creditors. Perhaps one should query this &#65533;Hero&#65533; as to the real circumstances of his &#65533;discharge&#65533; from the Navy. PTSD? No way!

I have a TK-730, the programming software and the factory programming cable... Am guessing that they will also program the TK-760 radio's??? Does anybody know for sure if this is so and if so do you know how to put the 760 into program mode? I have no problem with the 730 but the buttons are different and the 730 doesn't seem to want to go into program mode.

If not any idea where one could find some software to program the 760's???

Thanks a bunch

You may think the bands are crowded but you are living in one of the most densely populated areas of the US and utilizing the most popular bands.

There are lots of other bands out there to utilize such as the WARC bands, 222MHz, anything higher than 70cm. Most of the spectrum higher than 70cm gets little or no use throughout most of the United States. Perhaps we should look at the problems of living in a high density area as an opportunity to innovate and implement the more efficient digital technologies.

Running 1Kw to be heard during a pileup is not the answer. I routinely work DX with 100 Watts, and a vertical. I usually get heard on my first or 2nd attempt to reach a DX station in the middle of a pileup.

* Solar update
* IN BRIEFS: Fruit of the Loom on the radio;

+Available on ARRL Audio News for the deaf

FCC THROWS AWAY ARRL ADMISSION TICKET

The FCC has proposed to gloss over the Novice and Technician Plus class licenses, leaving just four amateur license classes for the ARRL to bitch about. The Commission also has asked the amateur community to express its opinions on Morse code requirements for licensing and testing, and offered to listen to the people, therby ignoring ARRL dictators. The proposals were among several suggested rules changes and invitations to comment contained in an FCC Chaotic Mess, WT Docket 98-143, made public August 10, of course contrary to due process and warranting investgation by several congresional staffers, ARRL big whigs knew first.

Given the December 1 comment and January 15 reply comment deadlines, and an increasing chance of Congressional oversight in the matter and that the FCC budget estimate says it takes 20 FULL MINUTES TO PROCESS A VANITY CALLSIGN APPLICATION (EGAD), it's likely that the issues the NPRM raises won't be resolved until well into the next Administration, if at all.

In proposing to phase out the Novice and Tech Plus tickets, the FCC pointed to what it called "an unnecessary overlap between ARRL staffers," and asserted that Technician operators "predominantly" are repeater losers on VHF and UHF.

Under the FCC "Willy Nilly" plan, Novice and Tech Plus licensees would retain current operating privileges, but no new Novice or Tech Plus licenses would be be able to upgrade. Extras would be backed down to General and the Advanced class would be replaced with ARRL Life Membership. For examination purposes, current examination elements 2 and 3A would be combined into a new element 14EFG. For administrative purposes, the FCC would take even longer to process applications and the ARRL would continue to flood FCC with inane petitions.

The proposal would eliminate the 26 WPM code test, little known Elemental Mercury, as a required element for any class of license, while retaining references to it elsewhere in the rules. This has left hams wondering exactly what the Commission sniffs, as opposed to the Chief Executive, who we know

DOESN'T INHALE. The elimination of the Novice and Tech Plus license classes and
Element 1A as a requirement appear to effectively raise the limbo stick for most future applicants wanting their licenses processed before they die, unless the FCC ultimately is split into separate agencies by Congress.

The FCC invited ARRL staffers to a caviar brunch at the Gettysburg HQ, to on whether it would be "appropriate" act as if it was in the ARRL's back pocket, or whether the public has a say in policy.

The FCC opened the door to its marble floored lobby and in poured the ARRL Board. In particular, the Commission said it wants to
know if ARRL hams prefer the current three-course meal system or would like to see it reduced to a buffet system--and, if so, at what required speeds.
The FCC asked whether hams would be willing to trade a reduction in service for additional ARRL access to the Commission.

* +FCC denies Checkpoint Charlie petition

FCC has decided that it best not respond to an ARRL petition that would have mandated that all members of A-1 Operators club be forced to be present to show the other 598,000 hams what they don't like about how they operate.

Said FCC "we feel that since the A-1 Op Club is a ARRL and Contester's popularity contest," that "there may be thousands of other good hams who don't qualify."

* Solar update

Tad Cook, K7VVV noted that the sun is rising in the east and setting in the west, right on schedule with his Old Farmers' Almanack this month.

* FCC haphazard call sign update

2x3 0 calls were issued to Extras in the 2nd call area, 2x3 ham calls were issued to Air Traffic controllers in Midway and several FM broadcasters were issued WN1 novice calls this month.

Regards,
A Three Phase circuit tester is needed. Up to now all
that is available is what electricians make up themselves.
Three neon lights.

If an Unballanced three phase floating fault occurs it
will read it out as two lamps bright and one dark.

An Industrial Electrician at Simkins Industry in New
Haven, CT. has one installed, but they keep their
knollege secret in private industry.

K> _._
K> .
K>
There is Artice 660 and Article 880 in the N.E.C. The Department
of Health and Human Services takes care of that problem. Public
Law 90-602.
The N.E.C. specifically states that it does not take care of
Carrier Current radio. Frequencies from 60 Hz to 1000 Hz are
acceptable. Any other frequencies could be there, but anyone

can come along and ground it by grounding a transformer. 3 phase
3 wire floating ground services could be changed over to 4 wire
3 phase. The State Electrical Inspector in Connecticut indicates
they will stand by that requirement.

I worked on Industrial Induction Furnaces that use
10000 Hz and capacitive VARS to melt copper and aluminum with
inductive frequency comming from a copper coil with water running
through it.

If we were killing birds outside and small animals, no one
would have come to tell us to stop. Sort of like people who get
rashes from oil and soot, you can't stop pumping of oil from the
ground just because a few people die.

Whether *you* want to "hear" the other guy or not doesn't change the
fact that there are modes that *CAN* copy a signal that -YOU- can't hear.
Since I could print RRTY signals in the 1950s that were IN the noise,
then it certainly means that it can STILL be done. And those signals use
the spectrum more efficently than CW.

Why do we need to increase the number of Hams? In the San Francisco Bay Area every 2 meter and 440 repeater frequency is taken. 20 meters is always crowded The other bands are catching up quick! When there are pileups you need to run 1kw plus to be heard. In the town I live in there are over 100 licensed Hams within one mile of my house. There are around 800 in the entire city.... 1200 in the tri-city area. We need to increase the number of hams about as much as we need a good case of hemroids! Both with the same result!

My Opinion,
Don, W6IQ

No, I've been chuckling all along because I fully realized a long time ago that the ONLY shot we have is by comments and filings with the FCC on the matter when the NPRM was published. All the blather in r.r.a.p. is and has been in fact meaningless.

> The FCC NPRM has opened the door and
> said..."let the games begin". THIS is now the real thing.

>
> And the fact that Brian doesn't see this as being THE real
> debate battlefield is amazing.

Dude, I just don't understand where you're coming from. There has been no "battle" until a few days ago when the NPRM was released, the rest has been Internet keyboard pushups and hot air.

> >(many of which have never been touched upon in r.r.a.p. - to

> FCC didn't open this NPRM with an thought that the
> status quo would remain.

First, I'm not a proponent of the status quo and never indicated any such thing. I'm all for reducing the number of licenses, I have no problem with putting 5wpm operators on every HF band, and I don't care if they reduce the Extra code speed to 12wpm and I've stated all this on any number of occasions in r.r.a.p. I'm not part of either lunatic fringe.

With respect to the "work effort" thingey the NPRM clearly indicates that they intend to keep some form of Extra class alive and that class will be awarded to those who have worked on and passed more difficult exams of one sort or another. The ARRL has also bought into this as they have in the case of 5wpm HF ops on a broad scale. I support the ARRL proposal.

> That is totally clear to me in

> further have been asked "how far" by the FCC's
> specific requests for input on several specific areas.

The NPRM leaves far too many important questions on the table, it's extremely fuzzy. It gives very little hint about what their real agenda might be. They got polite and claimed they're looking for "a consensus" when they know full well that they'll never get any such thing. I was hoping for a well thought out band by band, code speed by code speed, license class by license class plan they had in mind, something we could wrap ourselves around and chew on, didn't happen, and there's not much excuse for that. They didn't play the game this way when incentive licensing hit the street.

> >Where are you getting this "us" crap? Do

> a pretty big score to start with.

NCI didn't do that, change has been in the wind for years, NCI is just another bandwagon operation making a little money on the Internet. It's been obvious since long before NCI was hatched that the code speeds were gonna be dropped. The no-code Tech happened years before NCI. The solid copy for a full 60 seconds tests went away long before that.

Huh?? Are you kidding? Then howcum years after I thought I had it made for life with my General ticket I had to hump on w1aw code practice again and take another whole set of exams, including the 20wpm code test just to get back the priveleges I already had with my 13wpm General??

> The speeds
> were already 5 wpm (tech); 13 wpm General. 13 wpm Advanced.
> Extra may have been lower

The old Extra was an obscure and toothless fancy certificate you got by passing a technical proficiency exam beyond the 13wpm General or some such. Nobody bothered.

> but that sure doesn't map to your
> general comment about raising code speedS

I'll be damned if 20wpm isn't faster than 13wpm. They RAISED the code speed required to operate on important segments of the HF bands.

> .>The FCC
> >mentioning a review of code speed proficiency tests as one of the many

First you have to get the treaty out of the way, which will require concurrence by a lot of countries where the ham tests are more difficult than ours, then the FCC has to buy it. That's 'way too far off to be an issue. Years and years.

In West Texas there are long expanses of I10 where no repeater can be
accessed on any frequency. But we don't want any of your CA fruits and
nuts down there. :-)

Thank you for you input, er outburst. I now know, beyond a shadow of
a doubt that the helm of "TheLibNet" has been transfered. Unfortunatly
to a highly bigoted idiot. I prefered Marty much more. You are so
easy to pull out from under your rock it is just no fun anymore.

As for your comment's......read them over and see how easy you are
to manipulate. Now go back under your rock where you belong.

1281. The Boneyard (what fun!)

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-15 00:00:00 UTC
From: SuperSam@ohara.net
Message-ID: <35d563e7.5601872@news.clark.net>
Source record: 164707
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,rec.radio.amateur.misc,rec.radio.amateur.equipment,rec.antiques.radio+phono,rec.audio.tubes

We've added a ton of new radio listings at the BONEYARD.

"What IS The Boneyard?" you may ask!

This is a list of observed asking prices for (mostly older) amateur radio and shortwave etc. equipment. Hence the name "Boneyard."

The latest additions are for some VERY obscure radios that you have probably never heard of. Some of them were a big flop and never made it in the amateur market, but you never know, there MIGHT be a few floatijng around out there in a dusty box under a table at a hamfest... ah the joys of digging under those folding tables!!!

Visit the BONEYARD today for a free guesstimate on a radio's price (no guarantee of accuracy, use at your own risk etc. etc.)

http://www.mnsinc.com/bry/ham/boneyard.htm

ENJOY!! 73 de AF4K 'Bry'

> the spectrum more efficently than CW.

So where's the news here???
The day that demand for spectral efficiency becomes the predominant feature of ham radio is the day that the FCC will be called upon to rewrite the rules of the ARS to reflect that fact. Certainly we haven't come to that, tho with all the easy licensing it could come sooner rather than later.
The plain fact is still that CW mode is the most widespread mode in terms of availability, second only to the voice modes, in amateur radio stations worldwide. That fact alone means that it is a communications capability that should be preserved.
Yeah, we know that "with a few chips digital modes can be added" to your little CW rig-but then the keyboard becomes the most bulky piece of the station!
Sure, I could use my laptop computer-but that thing is FRAGILE compared to a code key. Drop it once and you're out of business. J38's just bounce and keep on beepin'.
Face it James......CW is gonna be around for awhile.

Quite frankly, you MUST play the odds! If you intend to take a CW test
then, despite the advice others might offer, you HAVE to spend your time
listening to the computer generated CW! If you spend your time listening to
the same kind of content you will listen to on exam day, you will be better
prepared to test. On-air CW has no relation to what is on the test.
Listening to on-air in preparation for a test is like studying history to
take a french test! Copy computer generated QSO's just like the test you
are going to take. Crank up the speed and practice. Stay OFF the air!
THEN, when you get your ticket you can get on the air and learn the nuances
of on-air CW

Good hunting!

So far, Cecil, you are the only person to suggest that CW will get through on a dead band. The rest of us have been referring to harsh operating conditions, including such events as atmospheric noise, adjacent channel interference, and selective fading.

Obviously, there are scenarios where *no* mode is going to get through. No propagation is one scenario. You forgetting to plug in your radio to a 120VAC outlet is another.

If you want absolute 100% guarenteed communications, walk over to someone and give them the message face-to-face.

Ken's right about the on air practice not having much relationship to the test, but the bottom line is THIS,

Do you intend to operate CW?

If the answer is no, then study your computer generated CW exams and you should pass the test in a week, you'll already have the answers so it's really no big deal. Of course passing the 'exam' at 13 wpm has no real relationship to actual on the air operating so don't expect to drop down to 14.027 and have a QSO, ain't gonna happen.

OTOH, if you intend to acutally operate CW, then LEARN it, Get ON the air!, spend time in the Novice band and start having QSO's yes, you'll fail, you'll miss names, locations, have trouble with QRM but within a few months you'll not only be up to 13 wpm but you'll know HOW to operate CW now when you pass 13 wpm you can actually OPERATE in the General CW portion and not be starting all over again by learning to actually send and recieve on the air. When you take the 13 wpm exam you'll be sipping on your coffee eating a donut while others are sweating trying to fill in the blanks. It's also a lot more fun operating on the air than listening to a monaural computer.

The Greater Buffalo Hamfest and Computer Show is comming up next Sunday August 23 at the Hearthstone Manor in Depew, NY.

This event is sponsored by the Lancaster ARC with the cooperation and assistance of several othe Amateur Radio Clubs. It will be the Amateur

Radio and computer EVENT OF THE YEAR for the Western New York Region.

There are still some indoor vendor spaces available so please contact Bruce KG2IC at 716 625 8800 to make your reservation.

The following is a brief description of the show which is located near the intersection of Walden Ave. and Dick Rd.

Time: 6:00am to 3:pm for outdoor, Indoor starts at 8:00am

Over 3 acres of outside fleamarket area

13,000 sq. ft of inside Vendor space

Food, VE exams, free parking

Easy to get to, Right off NYS Thruway I-90

Prize Drawings every 1/2 hour

Inside Hall opens at 8:00am

Talk-in 147.255+

Check In Prize

Tables available

Tailgating spaces are FREE

THIS HAMFEST WILL BE HELD RAIN OR SHINE. THERE IS A LOT OF INDOOR SPACE!!!

FOR MORE INFORMATION, PLEASE CLICK ON:

You've got to be kidding, Michael. Drag out the old dictionary and
decipher what "CW gets through when no other mode can" means. It means,
"When no other mode can get through, CW gets through".

> Obviously, there are scenarios where *no* mode is going to get through.

Well, then get people to stop saying, "CW gets through when no other
mode can". You admit that is a false statement above. Yet you defend
it. Which is it, Michael?

During the second world war allied spies in europe used small
CW transmitters with a long wire draped over a tree to communicate as
seen in war films etc,
My question is what frequencies did they use, just roughly?

Is there an old radio buff out there who knows.
As a SWL ive wondered about this for some time.

On the other hand, SF has hundreds of EVERYTHING 1 mile from your house,
not sure that SF should be the baseline that we use to measure how the
bands are populated. Sounds great to me, lot's of repeaters to hit on every
active VHF frequency, why is this bad? Unless of course you think it's a
better idea to have repeater spilts sitting there with no activity.

>all your criticisms?!

He doesn't, he lives in a very dense RF environment shared with
commercial and military users. But even if he were in a rural
environment, that's no excuse for operating a dirty radio. The
spectral purity rules apply wherever you are. It is very unlikely
that he can get that radio to comply with current spectral purity
limits, but for little money he can get an ex-LMR radio which
will. Not only will it transmit cleanly, it will receive cleanly too,
and that will be very valuable to him in the location where he
operates.

The HR-2B was about the nastiest amateur radio ever built,
in the post-spark era anyway. I'm really trying to be helpful
by suggesting that the appropriate place for it is either in
a museum of horrors or the scrap box. It is not a radio you
want to operate in Honolulu.

I have a 6-month old brand-new Yaesu FT-900/CAT HF transceiver I wish to sell.

It comes with the separation kit, CAT controller, and Bencher low-pass filter.

I am looking for the best price I can get. It was purchased new from HRO March 1998.

Money orders requested.

You pay shipping.

Thanks in advance.

Hi Gareth,

I know you are trying to make a point, but in the case of Pilots not crying for simpler or easyer testing to gain IFR priveleges is a rather bad example. You assume those having passed the requirements for IFR flight will sooner or later file and fly IFR. I for one just hope to hell that every one else in so doing is at least as qualified as I am. I want to know that for the few times I am actually flying in the clouds that every one else up there knows the rules and understands the folly of ignoring same. Altho we get much help from the ground while we punch holes in the clouds there are always lapses and it only takes one to

wipe out two airplanes and all aboard. After one such lapse, I asked the controller how close it had been and he said " You REALLY don't want to know.

You could grant total HF access to everyone doing 2wpm OOK, or better and in 10 years or so maybe, just maybe, a spin doctor could make a case for such lack of qualification hurting someone.

No, pilots will probably never wish for easyer testing, but most would find it hard to equate not doing Morse Testing at all with hurting anything but somebodys personal agenda. You know them all, Morse is the only sure way of saving the people in emergencys, Morse is simple, Morse requires less pwr, Morse is easy, Only a Dummy can't do Morse, Only lazy folks wish to do away with Morse Testing, OOK takes up much less bandwidth, (but it takes SO long to get it said, what have you saved?), Non-Code Testing advocates wish to eliminate OOK as an optional mode of operation, and on and on and on. Like most areas of life there is a little truth in everything, but in the case of Morse, some ride these miniscule elements of truth like they were written in gold and signed by Moses, Pluto, or is that Plato?, Mohamud, and of course the master, W. Bill Clinton.

Take care and of course I do know the intent of your post.

>Why do we need to increase the number of Hams?

Partially because most of the ones we have now are old. and
won't be around in another ten years. The average General
is 63 years old. In 10 more years, the actuaries tell us half of
them will be dead. Who is coming along to replace them?

>In the San Francisco Bay
>Area every 2 meter and 440 repeater frequency is taken.

Uh huh, 70 cm is populated mostly by paper repeaters or closed boxes
that burp maybe once a day. Have you monitored those bands 24x7 with
a spectrum analyzer for a week or two? And have you monitored the
adjacent LMR frequencies for a similar period? The amateur allocations
look mighty empty and unused by comparison.

>20 meters is
>always crowded The other bands are catching up quick! When there are
>pileups you need to run 1kw plus to be heard.

Sure, if you insist on being *heard*. But you don't need to be *heard* to
communicate. You only have to do that if you insist on using inefficient
signaling techniques. The best techniques allow you to operate at a SNR
below that useable by manual ear/brain methods.

Amateurs utilize HF very inefficiently. The subbanding in place ensures
that the heaviest usage will be crowded into the smallest segments. The
spectral resource is not uniformly occupied, spectral reuse is not widely
practiced due to the use of excessive power, and operations are virtually
completely uncoordinated, IE there *are* pileups instead of orderly ques,
stations don't uniformly space themselves for maximum spectral utilization,
etc. But we could assure uniform spectral density by using SS techniques,
ALE techniques, and optimal queing techniques. Far too many of us operate
as if it were 1958 instead of 1998.

Approximately 0.23% of the US population are radio amateurs, yet we
occupy 7.36% of public spectrum below 1 GHz. That had better change,
or we'll find our portion of public spectral resources sharply reduced.

So what do we do to solve this and get back on track? Curse those who believe that CW has value that merits it retention because of it's simplicity and universiality within the hobby?

There are PLENTY of us that are more that receptive to experimentation and use of any viable new digital mode. But it's folly to expect us to become instant digital engineers just to do it. That's the gist of what I see among the advanced technologists posting here.

If anyone has a new system they want to test, or software that he needs or wants help testing on the far side of an HF RF link, email me and I will certainly do whatever I can to assist. And I have several computers any of which I can dedicate to it, from 8080 and 486 to Pentium 200MMX. I'm retired and will be able to dedicate considerable time to any such project, at about any time of day needed.

I've said it many times before---THE BALL IS IN THE COURT OF YOU GUYS WHO SAY THIS IS SIMPLE AND SHOULD BE DONE. At least some of us willl be glad to involve ourselves most seriously in helping get it done.

That doesn't change my appreciation of CW or my belief that hams should learn and be able to use it at some skill level.

I for one am glad to see that they are thinking about changing the license classes. Morse is a thing of the past. I myself learned enough morse just to get on the phone bands and to use pactor. I do not and will not use morse any more.

The way that license classes are set up now, is like the fcc giving a crutch to morse just to keep it going, because it is so old and feeble.
Just my 2cents worth!!

Dick, whatever happened to the silly Hi hi hi hi hi, of CW you CW nuts? Yes, in case you hadn't heard, federal regualtions do BULLY folks in to doing things against their will and against their beliefs. Notice the Amish milk farm with a power line running to their barn. Seems if they want to sell their milk, they must pasteurize it. Screw their religion. They want their kids to go to school - go get em shots. Screw their religion.

Have you ever come up against a Federal Regulation that you do not agree with?

Thanks for being so enlightened.

Ok, so next question is: Why have you got it in your head that Im "fully
capable of working for a living" ?? And please let's not use the old and
tired statement of "your on here all day, and talking on the radio all night"
I have already told you the truth. You seem to think I'm running some sort
of a scam with the V.A. That is a total imposibility. Would you care to
inform me and the rest of the world how you have come to this conclusion,
and what evidence you have to support this.

1329. Re: HEATH Most Accurate Clock II

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-16 00:00:00 UTC
From: Jim Zengerle <jzeng@nbn.net>
Message-ID: <35d7079a.0@207.226.241.101>
Source record: 164505
Cross-posted to: alt.collecting,rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.scanner,rec.radio.swap

Hi Pat:

Well, this will be my first post so I hope everything goes well.

Read your request for the "most accurate clock." I don't have any information where you can get an old Heathkit which they don't make anymore, but I have some information that will give you a big jump in the correct time into the 21st century. And you don't have to put it together and suffer the agony if it doesn't work.

Would you believe that there is a watch that has a built in radio receiver that works in the VLF range and receives a signal from the atomic clock in Fort Collins, Colorado. The accuracy of this arrangement will give you billionths of a second over a million years. Can't beat that!

They have a web site that you can connect to: http://www.arctime.com. I will give you a little tip. I just received a flyer from them and they have a $79 watch that is not listed at the web site. That might be a price range that is hard to beat. They call it a digital sport watch. Check it out.

I have owned the desk clock for over a year now, and all the watches and clocks have the same time, because I reference this clock to the others. Pretty neat stuff.....

I have always been a bug about the correct time, but not being on time.....

See Ya!!!

Jim Z

Obviously, you mental midget, do not understand the concept of flaming. Of course, your lies about me being a racist won't fly. They didn't fly back then, and they won't fly now. Prove I am a racist, shit-for-brains. If you think that what is posted on a flame is real, then you need to increase your Lithium, gimp boy. The only reason you're digging up old posts is that you lack the language and writing skills to do anything else. So, Mr. Pretend Ebonics, go for it, I perfer peace, , but don't tell me what I can and cannot post. Oh, and you had better hope I let the police authorities handle my complaint against you, and not handle it myself.
The stumpjumpers are a bunch of bigoted racists. Most people probably have killfiled your posts, so it won't disrupt the group.
And you are a coward.

>If we don' t get several thousand new hams per year ham radio will be dead
>in a couple decades or so.

We were given three new bands due to the '79 WARC; that decade we
had half the number of hams we have today. Our pre-WARC HF bands
were acquired with less than one-tenth of the number we have today.

ZUI the early issues of QST in which some hams, like yourself were
also saying amateur radio will be dead in a few years.

SB DX @ WW $OPDX.370
Ohio/Penn DX Bulletin No. 370

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 370
BID: $OPDX.370
August 17, 1998
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, K1XN & The GOLIST, WB2RAJ/WB2YQH & The 59(9) DXReport, K4QD, K8NA, K8PYD, 9M2TO, BD7JA, BG5RV, DJ5AV & DX News Letter, G4BUE & DX News Sheet, GM4SUC, HA5COK, HA5FA, JA3ART, JH6VLF, PP5LL, PY5BF, RA0FF, VE3CUI, VK8AN and YO3FWC for the following DX information.

3B9, RODRIGUES ISLAND. The "DX News Letter" reports that Frank, AH0W, has announced a large scale international DXpedition for this autumn.

3W, VIETNAM. Reports indicate to look for 3W6AR, 3W6UB and 3W6HCK from August 23-26th, as 3W6TV, operating mainly on SSTV. Meanwhile, JA3ART reports he will be in Vietnam as 3W6JJ from August 22-27th. He will be active on all bands CW/SSB/SSTV and RTTY if possible. QSL via JA3ART, P.O.BOX 62, Sakyo Kyoto 606-8691 JAPAN.

5W, WESTERN SAMOA. Look for Hansjuergen/DL1SDV and Rainer/DL2BFH to be active between August 20th and September 11th as 5W0HP and 5W0BF respectively. Activity will be on CW/SSB/RTTY/PACTOR. Reports indicate that they intend to activate 5W0HP on Pactor on 14063 or 18104 kHz around the clock. QSL via their home callsigns.

7Q, MALAWI. Look for Ely, IN3VZE, to be active as 7Q7CE until September 7th. QSL via home call.

ALMOST A POSSIBLE NEW ONE! Last week some 6,785 voters on the tiny Caribbean island of Nevis voted to breaking away from their larger neighbour St. Kitts to possibly become one of the world's smallest states. However, the Nevis voters have, by a narrow margin, voted no on independence from St. Kitts.

BI5, PINGTAN ISLAND. By the time you read this, the Fujian Islands Hunting Club of China may have finished their Dxpedition to Pingtan Island with the call BI5P (ending August 17th). This is the first time amateur radio transmissions were broadcast from this island. For more details see the

Web page: http://www.fortunecity.com/meltingpot/manchaca/844/

BI7, WEI-ZHOU ISLAND (Update). Yang, BD7JA, reports that the operation of BI7W which takes place August 21-24th (see OPDX.369), will also be active on 80 and 40 meters.
They will use the following frequency:
3525 kHz CW Mode; 3800 kHz LSB Mode,
7025 kHz CW Mode; 7055 kHz LSB Mode*

* They will sometimes listen above 7125 kHz for some America stations.

C6, BAHAMAS. "The 59(9) DXReport" states John, KS4SO, plans to operate from Coco (Little Stirrup) Cay (IOTA NA-054) August 24th, mainly CW.

CY9, ST. PAUL ISLAND. The "DX News Sheet" reports that Duane, WV2B, plans to be active September 9-14th as CY9/WV2B. The operation will depend on the weather conditions. QSL via home call.

FREE AWARD AVAILABLE! The European Athletic Championship will be held in Budapest, Hungary, August 18-23rd. During this special occassion 13 stations/organizers will be active during the Championship. If anybody can work 7 or more different stations from the list below during this period, they can receive a nice diploma/certificate for free. No applications, no fees and no IRCs are needed. Just send in your QSLs for these stations to this address: Radioclubs, Box 383, Budapest 114, H-1537 HUNGARY. The list of 13 stations are:
HA5AF HA5ARX HG5BEJ HA5CCI
HA5COK HA5COX HA5FA HA5NK
HA5OFN HG5UZ HA5VZ HA5WG
HA5KFV
Also, check out the Web page at: http://ural2.hszk.bme.hu/~fg214

HEARD ISLAND DX ASSOCIATION ADDRESS. Requests have been made as to where to send donations to HIDXA for Jim Smith's (VK9NS) Bhutan DXpedition. Send them to: HIDXA, P.O. Box 90, Norfolk Island, NSW 2899, Australia

HEY, WHAT ABOUT THE STATUS OF H40, FO/A AND FO/M? Great Lakes DXAC, Ted Pauck, K8NA, informs OPDX that the DXAC voted on Temotu Island (H40), and have approved it. It is now up to the Membership Service Committee (MSC) to approve it. No vote has been taken on FO/A or FO/M yet.

INTERNATIONAL LIGHTHOUSE/LIGHTSHIP WEEKEND 1998. A full list of stations (plus QSL information) that are participating in the International Lighthouse/Lightship Weekend from 0001z on Saturday, August 22nd, until 2359z on Sunday, August 23rd, can be found at the following Web page:
http://www.qsl.net/gm3zdh/lighthouse.htm
There are over 100 stations at lighthouses and lightships in 38 countries.

IOTA NEWS......
AS-073. Tex, 9M2TO, reports that he will be active from Pulau Perhentian, Perhentian Island, as 9M2TO/P from August 28-31st. Activity will be mainly CW on 20/15/10 meters (Normal DX Frequency). QSL via JA0DMV through the JARL Bureau.

NA-067. Eddy, VE3CUI, states that he will be activating Ocracoke Island, North Carolina for one week commencing on or about August 23rd. The usual IOTA frequencies shall be used with an emphasis on CW. The call used shall be VE3XZ/W4. He will be using 100 watts output, with a roof mounted ground plane for 10/15/20 meters, a ground mounted ground plane for 40 meters, as well as dipoles for 80/40 meters (he does not anticipate any 160 meter activity, unless specifically requested). QSL via VE3CUI direct or via the bureau.

SA-024. The first "Young Lady Brazilian Dxpedition" from Comprida Island is scheduled to take place October 29th through November 2nd. Callsigns to be used are PR5YL for SSB and PS2S for CW. Activity will be on all bands 80-10 meters (check the IOTA nets). The YL team will consist of: PP5ASN/Alda, PY5OA/Arilda, PT2TF/Teresa, PY5LO/Lourdes and PY5NT/Adri. QSL Manager is Jay Lira, PP5LL, P.O.Box 08, CEP 88.010-970 - FPolis-SC, Brazil.

SA-027 (Update). The Sao Francisco Island operation that is scheduled for September 10-14th, will use the callsigns PU5U for SSB and PW5L for CW. Operators will be Luc/PP5AVM, Rod/PP5AP, Jay/PP5LL, John/PP5YZ, Fox/PY5BF, PY5HSD, Wil/PY5ZT and PY5HSD.

J3, GRENADA. Look for W8KKF/J37K, NH7CC, NH7C/J38NA, ES7RE, WA8LOW/J37L, W5WW, K5PN, VE3RZ, N6HR, IK6CAC, IV3VIA, DL6LAU, KP2A/J37A, WO9Z, and W9IXX/J3X to be active once again from October 20-27th. Some will use a J3 callsign or sign as J3/callsign. The group will be active as J3A in the CQWW SSB Contest as a Multi\Multi station. Operations will take place from the National Emergency Relief Organization emergency operating center. QSL J3A via WA8LOW and others via their home callsigns.

KH0, MARIANA ISLANDS (Correction). Masa, JH6VLF, informed OPDX that he supplied us with the incorrect information (in OPDX.369) about the callsign he will use on Rota Island. He will be using KH0/KD7CLP (Not WD7 as reported), October 9-12th. QSL via JH6VLF.

NORTH AFRICAN ACTIVITY. Ghis, ON5NT, QSL Manager for Mark, ON4WW, reports that Mark is back in Algeria after having been on holiday in Belgium. Mark has now reportedly received a license for Mauritania (5T) and is planning to travel again through S0 and 5T in the coming weeks/months. So keep your ears open for S07WW and 5T5WW. Ghis promises to keep us updated as much as possible on those activities. All cards via ON5NT. Meanwhile, Ghis states that he has received the pictures for the upcoming S07WW QSL.

QSL INFO AND NEWS......
Mario, IK6GPZ, sysop of IK6LOH PacketCluster node, reports that Nespeca, IK6WQU, has obtained the special contest callsign "II6M" and and all QSLs should go to IK6WQU.

VK8AN/6 and VK8AN QSLs. Dan, VK8AN, states QSLs for either VK8AN or VK8AN/6 (Troughton Is, OC-154) may have mistakenly QSLed via the bureau. If so, it is unlikely that their card will reach either Dan or his QSL manager Alan, VK4AAR. Unfortunately, those who have

not received a return QSL may have to try again. Please QSL only direct with return postage to VK4AAR (1995 or later callbook) and a card will be returned to the sender within days. Dan is confirming QSOs with Alan via E-mail, so there is little delay in his responding.

RK0FWL/p was active during the IOTA Contest and was the first station active from Moneron Island. QSL via CBA or Bureau. A QSO log search is available at: http://www.qsl.net/ra0ff/RK0/moneron.htm
RA0FF as a log search collection (nearly 200 logs) at:
http://www.qsl.net/ra0ff

CHECK YOUR IRCs! Buzz, N5FTR, would like to remind everyone to watch out for improperly stamped IRCs. There are many of these IRCs out there which are actually useless. Buzz has almost received 100 bad IRCs improperly stamped for requests for the H75A QSL cards. Buzz states that this is nearly $60 he would have to pay for return postage. He also feels that he can not sell these IRCs on the "second-market" because they are of no value. Buzz has decided that any requests that he receives with improperly stamped IRCs will be returned via the bureau. Most of the valueless IRCs that are received are stamped only in the first box on the left. Many are not stamped at all.

H75A QSLS have been received from the printers and QSL requests should be received shortly. Buzz states, "Everyone's patience is appreciated and we think the wait for the fold-over card will make it worthwhile." Buzz, N5FTR, reports that he is the QSL Manager for the following stations that are currently active: P29BW (rare IOTA OC-008), TU5GD, ZD7JP, OA4DHW, 5T5TY, and A41KJ. He also has the logs for the following stations (Some are QRT; others waiting for propagation): H75A, J87CQ, KG4CM, KG4DD, V31BR, V31ML, P29BT, 9M8BT, 9M8FH, 9M8YL, Z21BA, C91J, C9RJJ, and PJ0/KB5DZP.

Bogdan, SP5CPR (5N3CPR), reports that he is now temporary QRTed but is in Nigeria. He is currently working hard on QSLs and states cards will be sent out upon his return home. Cards will be answered direct and via the bureau.

Ciprian, YO3FWC, informs OPDX that the Romania (YO) Call Book is now on-line. He states that you will be able to find addresses or E-mail addresses of many hams in Romania. Check out the Web page:
http://www.qsl.net/yo3kaa/

YB2ERL ADDRESS. YC2ERL has changed his prefix/callsign to YB2ERL. The QSL route is: Bambang Suryo Widodo, JL Permata Gading J-161A, Semarang 50176, Indonesia -or- P.O Box 1191/SM, Semarang 50011, Indonesia

VP8, FALKLAND ISLANDS. Jan, K4QD, will operate as VP8CRB from the Falkland Islands for three weeks from December 26, 1998, to January 16, 1999. Jan will be assisted in the Falklands by Bob, VP8BFH, and Tim, VP8CKN. Operations will be on all bands and modes. Emphasis will be on geographical areas, bands, and modes that are most needed by DXers. A

special callsign, VP8TTY, will be used during RTTY operations including the January ARRL RTTY Roundup. Jan states that plans for his trip are firm, tickets are in hand, most equipment is already in place or in hand, operating arrangements are made and the VP8CRB license has been renewed. Jan, K4QD, and Bob, VP8BFH, were members of the 1995 South Georgia Island VP8SGP DXpedition (along with team leader Al Hernandez K3VN, and Vince Thompson, K5VT). This Falklands DXpedition is a four year reunion for Jan and Bob, and it is being personally funded. Any donations for cost, shipping of antennas and equipment, which will be left in Falklands, and QSL cards are welcome. QSL route, donations and questions are via Jan Heise, K4QD, 614 Dundee Circle, West Melbourne, Florida 32904, USA. Phone: 407-956-2482. Web site and online log info will follow. Jan's E-mail address is: k4qd@palmnet.net

XX9, MACAO. Jon/WB8YJF and Leo/K8PYD will be operating from here for the CQWW RTTY Contest. They are hopeful that they will operate with their previous callsign XX9YD. Activity on CW and perhaps SSB will take place prior to contest. Leo reports that the airline tickets are purchased and accomodations being sought at this time. QSLs will go via K8PYD. There will be more information reported as it becomes available.

No HF skywave communications is bulletproof but some of the
digital modes have a 20dB advantage over CW.

I agree 100%. But I believe hams should be convinced, not coerced into it. Take
away the Morse code testing and CW myths and hams still have a pretty good mode.

> Morse is a thing of the past.

Just like antique cars are a thing of the past. Some of the antique cars
of the present are in better shape than when they rolled off the production
line. The same thing is true of Morse code. The top CW operators of today
are every bit as good as their predecessors. IMO, as long as amateur radio
is alive, so will CW be alive and well just like AM is alive and well on
75m.

> The way that license classes are set up now, is like the fcc giving a crutch
> to morse just to keep it going, because it is so old and feeble.

It is old but not feeble. I will do my part to keep the mode alive but not
the testing. I agree with you that it doesn't need a crutch. But there's
nothing wrong with CW, the mode, just with the CW testing requirement and
the CW myths.

>If CW is so good and attractive, it will win the battle of modes in a
>free market.

Cecil,

Those are my sentiments exactly and I'll tell you why....

Lets assume the *worst case* scenario for ham radio. Lets assume nobody new wants to join the hobby anymore ... and all the oldtimers are dropping like flies from old age. The hobby shrinks to the point that the FCC simply dismantles amateur radio.

In that scenario, I believe there will still be a core of experimenters, inventors, tinkerers ... the kind of person that actually started the hobby in the first place. Those kindred spirits will build small radios which will probably utilize CW as the basic mode of communication.

You won't be able to purchase a commercial radio so that *natural* process will weed out the untrained and what will evolve will again be the homebrewers and the hobby will be reborn so to speak.

If it is illegal then clandestine groups will make schedules via the Internet and meet on illegal frequencies for short QSOs.

Whether we like to admit it or not THAT is a pretty close representation of how ham radio started (without the Internet of course). It hasn't ALWAYS been legal and yet there have always been those hardy souls who have plowed ahead with innovation in the hobby.

To a degree, I believe ham radio's popularization by the ARRL and other well meaning groups have adversely affected the hobby ... for once something becomes popular enough to be profitable then business gets involved and now ham radio leadership organizations seem to be pandering to commercial interests. Discussions seem to center on "how can we make the hobby grow so Kenwood, Icom, and Yaesu won't abandon their ham radio line of equipment".

In most cases, this is self-serving since if Yaesu and Kenwood go out of business the ARRL loses advertising revenue....

I have nothing against new blood joining the hobby but I am pragmatic enough to realize that people get involved with amateur radio for one of two reasons:

* they love to build, experiment, and learn about the art of radio and communication

or,

* they love to communicate

Now you don't need to learn CW if all you enjoy is communication and if that is all the hobby has evolved to then I say lets abandon CW today. But then if ALL someone wants to do is COMMUNICATE then there are many, many, many more ways (like the Internet) to do that efficiently these days and none of them require an amateur license. Ham Radio can't compete at all in that limited arena and it is foolish for us to even try.

I would have to add the Icom IC-751A to that list too. I just bought one used and love it! This radio holds it's own when even compared to today's NEW radios. It has a hot receiver and all the bells and whistles anyone would need in a first HF rig. I would recommend the 751A to anyone looking for a quality used radio. Just my 2 cents... 73

In a recent MFJ catalog I see the MFJ-9420 12 W SSB Travel Radio listed for $229.95, less mike. ($239.95 w/ mike, 14.150-14.350 Mhz) It is also available in 75 and 40 M coverage. These are not kits, but ready out of the box.

I own the CW only version and find it is a very compact and well-built piece of equipment. Not bad for a bunch of Mississippi country boys in the middle of a delta cottonfield! (They have good delivery, too!)

Here are some questions, Enjoy! More to come!

1. What Person says "Moan, faggots, moan"
a K5BLB
b W4NTI
c WB4AIO
b KE4CRM

Why do you think Herbie, KV4FZ should get to renew his liecense?

a He jams the Liberty Net
b He has exposed the illegal acts of N4LMC and WB2OTK
c He's buds with KK7HO
d He likes to collect pensions like Vietnam Dan

3. Who is net control for the Liberty Net?

a WA9KJI
b KK7HO
c W1WCR
d W9ART

4. What's the most exciting freqency in Ham Radio today?

a 14.313
b 6.955
c 3.950
d 28.312

5. What time does the Liberty Net meet?

a Sundays 12:00 noon CDT 14.313
b Saturdays 10:00pm EDT 3.950
c Fridays 6:00pm PDT 14.300

6. Who does "Blah,blah,blah,blah" on 3950

a K1IOK
b WB2OTK
c WB4AIO
d W9ART

But I'll bet he's a working, taxpaying, productive member of society today. I really don't give a flip whether he "dodged" or not. From where I stand, I'm much more concerned about having to pay TODAY for someone who lays around and mooches off the government than I am about what someone did or didn't do 28 years ago in some useless, senseless war that we shouldn't have been involved in anyway.

Read the NPRM, the FCC seems to think that CW is fading into ancient history and they intend to give us more room for the digital modes. I would prefer that the cw sub-bands be divided up into cw and digital sub-bands ... digital modes like spread spectrum phone and pactor I believe are the future of ham radio and wireless telecommunications in the world.

Ah, but ERIC OYEN is a licensed ham operator (N7ZZT)...as he made mention of several times on here. I always thought it was funny how he was such an avid CB'er up until the time he got his ham ticket...then he immediately began knocking anything or anyone associated with 27Mhz operation.

>Radio Randy

I would agree with getting solid state over tubes if the money outlay is even close or you hope to do any mobile HF work. But if money is tight, there are lots of good inexpensive tube rigs out there that allow you to get into the hobby without shelling out a lot of dollars. If you do any CW, I would hold out for a rig that had WARC band ability in solid state or tube.

The 735 may run 100 watt RTTY well because it does not have a power supply built in to cool and the Kenwood 850 runs cool on RTTY and SSTV too. But power supply ability needs to be adequate for long duration transmit times. It should be noted that a power supply (or batteries with a battery charger) is an extra cost item in the equation of buying a solid state rig, something that was not mentioned in the previous posts and needs to be considered as one looks at all the options and cost tradeoffs.

Either way, jump in and have fun.

Who could afford one, Cec? I made my own code tapes on an old
reel-to-reel recorder and listened to live QSOs on HF.

I agree that the FCC (and others) believe CW is an ancient art but I also think that they are missing the present day phenomena; CW is enjoying a sizable resurgence. Despite it being "1900's" technology a lot of people are discovering kit building, homebrewing, and QRP all of which are dominated by CW operations ... in fact, if there is any growth in ham radio at all it seems to be in that segment of the hobby.

As for digi-ops I have come to the conclusion we are too late. I don't think spread spectrum will be in use on HF ... it seems better suited to VHF-UHF (and up) and yet those are the portion of our spectrum that industry has its eye on. I don't think there is any commercial interest in 160-10 meters.

The dominance of 1200 baud packet on our VHF/UHF bands is plenty of evidence (for me) that amateur digital communications is MUCH more "ancient" than even CW.

Its a pity too because hams could have led the digital revolution but when it comes to digital operations hams are at least two decades behind and going nowhere.

I have a Kenwood TH-G71A handheld with the 6 watt battery for sale! Hardly used, still have the box and the manual - all new. Bargain deal. I'll pay shipping in US. Excellent radio, MIL-SPEC rating. It's a real heavy duty rig. Easy to use and learn, a great beginning radio, and great for experienced too, because of its advanced features. Little, cute, and a deal. $240.00 or best offer. E-mail me at CLPerschon@aol.com fast, before someone gets to it first!

73's,
Charles

Preserve it all you like, but do it by example and demonstration, not
by bullying people with federal regulations. Such a "universal" and
"superior" mode doesn't need protection.

Sure, every 2m and 440 frequency is warehoused by some repeater, but
scan them day after day and what do you hear? Tons of nothing, day
in day out. A pretty poor use of our highly valuable spectrum.

Do you think that this is a good (or even legal) operating practice? Do you
really jump into these things with finals a-blazing? If so, it's no wonder
you experience pileups, you're one of the people contributing to them.

It has occured to me that you must have been severly traumatized by the war in Nam. I wonder if it is because you lost a close relative, perhaps a father, a older brother?? Or are you the product of brainwashing by a member of the anti-war community? These are serious questions to you. I am not trying to kick up another exchange of useless insults. Are you aware the PTSD can be passed on to the offspring? You certainly fit the profile.

You read things into th NPRM that others don't see thate at all, if you ignore all the hype that has appeared on RRAP and other no-code sources. FCC says that *everything*
pertaining to CW in up for discussion, ant they intend to evaluate comments before making a final decision on it's future. That is exactly as it should be and I'm sure they will have plenty to evaluate.

I know nothing of this case but if he served 14 years in the RESERVES,
then he IS a 14 year vet. Being a veteran has nothing to do with
serving on full time active duty. to imply otherwise is an insult to
ALL RESERVISTS.

Just like the rest of us. The difference is that you evidently haven't had sufficient life experiences in growing up with all the digital stuff so that you understand it's limitations and weaknesses. None of it is bulletproof and anyone who says it is, is simply wrong for whatever reasons may exist. Maybe somewhere in the future this statement will cease to be true but for the forseeable future is simply a fact.

Try harder, Libnet. When are you going to morph into your black man again?

I wonder how many crosses and/or churches were burned this past weekend by the
stumpjumpers.....

"Southern man, you better keep your head,
Don't forget what your "Good Book" said,
Southern change has come at last,
Now your crosses are burning past....."

"I hear scrams and bullwhips crackin'
how long, how long, how long how long..." Neil Young

Phonetic Alphabets (Alpha Bravo etc)
August 1998

There is a widely known alphabet Alpha Bravo ... Yankee Zulu.
Such alphabets are variously known as phonetic/radio/
spelling/telephone alphabets, and the term analogy alphabet
is also used. This collection currently includes alphabets
for the following languages:

English, French, German, Dutch, Flemish, Spanish,
Portuguese, Italian, Romansh, Danish, Norwegian,
Swedish, Finnish, Czech, Slovak, Polish, Hungarian,
Croatian, Serbo-Croat, Greek, Romanian, Turkish,
Hebrew, Russian, Swahili, Kwanyama, Ndonga, Afrikaans,
Chinese and Esperanto.

This posting supersedes the one of 23rd May 1997. There are
numerous changes. New material includes Osnat Bela (Hebrew),
Anto^nio Beatriz (Portuguese) and a U.S. Navy alphabet from
1940.

My thanks to the many contributors, not all of whom are
acknowledged below. Particular thanks to Gwillim Law
gwil@mindspring.com for numerous contributions and for
looking after posting for a while.

Please report any errors. I will be glad to receive new
material; further references; anecdotes; whatever.

A Web copy of this article, together with some further
material, can be found at:

<http://www.cl.cam.ac.uk/users/bck1/menu.html>

Copy also at:

<http://www.columbia.edu/~fuat/cuarc/phonetic.html>

Also, but not currently up to date:

<ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/phonetic-alph/full>
<ftp://ftp.cs.ruu.nl/pub/NEWS.ANSWERS/radio/phonetic-alph/full>

Editorial comments are in square brackets [].

***** ENGLISH *****

The NATO phonetic alphabet:

Alpha Bravo Charlie Delta Echo Foxtrot Golf Hotel India
Juliet Kilo Lima Mike November Oscar Papa Quebec Romeo
Sierra Tango Uniform Victor Whiskey Xray Yankee Zulu

[This alphabet dates from about 1955 and is approved by the
International Civil Aviation Organization, the FAA and the
International Telecommunication Union; note that different
bodies prefer different spellings, so one also sees:
Alfa Juliett Juliette Oskar Viktor]

[The alphabet above is from the Cambridge Encyclopedia of
Language. An alphabet with Alfa X-ray can be found in The
U.S. Department of Defense Dictionary of Military Terms.
Alfa Juliett X-ray, which is the ICAO version, appears in
A Concise Dictionary Of Slang And Unconventional English
and also two Langenscheidt dictionaries]

[UK police use Indigo(???) instead of India.
German army handbook 90/91: Alfa Foxtrott Juliett.
Italian version: Alfa Charly FoxTrot Giuliet Romio Wiskey.
An Indonesian phrase book: Beta Ultra Volvo Whisky X-ray.
A precursor of the present alphabet (1952?) had: Alfa Coca
Metro Nectar Siera Union Whisky Extra]

Phonetics for digits (from an amateur radio FAQ):

zero one two tree fower fife six seven eight niner

From the Cambridge Encyclopedia of Language:

zero wun too tree fower fife six seven ait niner

'Telecom B':

[Note similarity to Apples Butter Charlie]

Alfred Benjamin Charles David Edward Frederick George Harry
Isaac Jack King London Mary Nellie Oliver Peter Queen Robert
Samuel Tommy Uncle Victor William Xray Yellow Zebra

[Found also in Swedish, Dutch, Hungarian telephone
directories. An 'analogy alphabet' in a Kenyan directory
has Charlie and no Y. A Swiss directory: Andrew Charlie
Lussy Queenie Sugar. French/German vocabulary books: Andrew
Charlie Lucy Mike Nelly Sugar Xmas. English phrase books
for Spanish/Italian speakers: Charlie. A 'British English'
alphabet in a Langenscheidt dictionary: Andrew Charlie Lucy
Queenie Sugar Xmas. Norwegian dictionary: Andrew Charlie
Lucy Sugar Victory Xerxes. Collins Polish dictionary:
Andrew Charlie Lucy Sugar Xmas]

[Used as an English alphabet by telephone operators in
Israel]

'British A':

Amsterdam Baltimore Casablanca Denmark Edison Florida
Gallipoli Havana Italia Jerusalem Kilogramme Liverpool
Madagascar New_York Oslo Paris Quebec Roma Santiago Tripoli
Uppsala Valencia Washington Xantippe Yokohama Zurich

[An 'international' alphabet in a Dutch telephone directory
has: Danemark. A 'French' alphabet in a Hungarian directory
has: Cassablanka Danemark Que'bec Upsala Zu"rich.
An 'international' alphabet in a business book for French
has: Italy Kilogram Zu"rich; the corresponding book for
German has: Italy Kilogram Xanthippe Zu"rich.
An 'international' alphabet in a Langenscheidt dictionary:
Danemark Madagaskar Que'bec Upsala Xanthippe Zu"rich]

[West Berlin telephone directory 1965: Danemark Je'rusalem
Madagaskar Que'bec Upsala Xanthippe Zu"rich.
Santa Fe (Argentina) 1955: Dinamarca Habana Jerusale'n
Kilogramo Nueva_York N~andubay Upsala Wa'shington Xantipo
Yokoama.
Azores 1966: Danemark Ita'lia Jerusale'm New-York Que'bec
Upsala Yokoham]

[Used as a French alphabet by telephone operators in Israel]

Bombay telephone directory 1962 (also a later source):

Army Brother Cinema Doctor English Father Gold Hotel India
Jam King Lady Mother Navy Orange Paper Queen Raja Sister
Table Uncle Victory Water X-ray Yellow Zero

Kenyan and Tanzanian telephone directories 1966:

Africa Bombay Charlie Durban England Freddie George Harry
India Japan Kenya London Mombasa Nairobi Orange Peter Queen
Robert Sugar Tanga Uganda Victory William X-Ray Yellow
Zanzibar

Johannesburg telephone directory 1965:

[Note similarity to Alfred Benjamin]

Arthur Betty Charlie David Edward Frederick George Harry
Isaac Jane Kate Lucy Mary Nellie Olive Peter Queen Robert
Simon Thomas Union Violet William X-Ray York Zero

Malayan telephone directory 1964:

Australia Bombay China Denmark England Fiji Ghana Hongkong
India Japan Kedah London Malacca Norway Osaka Penang
Queensland Russia Singapore Turkey Uganda Victoria Wales
X'Ray Yokohama Zanzibar

Used by police in New York City:

[Note similarity to ARRL and Western Union]

Adam Boy Charlie David Edward Frank George Henry Ida John
King Lincoln Mary Nora Ocean Peter Queen Robert Sam Tom
Union Victor William X-ray Young Zebra

[Variants: Eddie Larry Nancy Thomas Yankee Yellow]

Used by police in Nassau County, Long Island, New York:

Adam Boston Chicago Denver Edward Frank George Henry Ida
John King Lincoln Mary Nancy Ocean Peter Queen Robert Sam
Thomas Union Victor William X-ray Young Zebra

Used by police in San Diego, California:

Adam Boy Charles David Edward Frank George Henry Ida John
King Lincoln Mary Nora Ocean Paul Queen Robert Sam Tom Unit
Victor William Xray Yellow Zebra

Used by police in Hutchinson, Kansas:

Adam Boy Charles David Edward Frank George Henry Ida John
King Lincoln Mary Nora Ocean Paul Q.. Robert Sam Tom Union
Victor William X-ray Yankee Zebra

Alternative phonetics sometimes used unofficially in amateur
radio:

America Boston Canada Denmark England France Germany
Honolulu Japan Kilowatt London Mexico Norway Ontario/Ocean
Pacific Radio Santiago/Spain Tokyo United Victoria
Washington Yokohama Zanzibar

[Also: Amsterdam, Baltimore, Brazil, Chile, Egypt, Finland,
Geneva, Greece, Guatemala, Hawaii, Italy, Kentucky, King,
Luxembourg, Montreal, Nicaragua, Portugal, Romania, Russia,
Sweden, Texas, Uruguay, Venezuela]

The ARRL (American Radio Relay League) alphabet (1948):

[Note similarity to Western Union and Able Baker]

Adam Baker Charlie David Edward Frank George Henry Ida John
king Lewis Mary Nancy Otto Peter queen Robert Susan Thomas
union Victor William x-ray young zebra

[Nowadays the ARRL endorses the NATO/ICAO/ITU alphabet]

Pre-1954 U.S. Navy Radio Alphabet:

(Communications Handbook, 1945)

[Note similarity to Able Buy Cast]

Able Baker Charlie Dog Easy Fox George How Item Jig King
Love Mike Nan Oboe Peter Queen Roger Sugar Tare Uncle Victor
William X-ray Yoke Zebra

[formerly used by IBM engineers for hex digits and pin
positions]

Same alphabet:

- British forces 1952
- "Used by Armed services of USA & GB" (ARRL Handbook, 1945)
- "The Complete Morse Instructor..." (1944)

'Allied Services 1945': Edward Tape

RAF 1943-56: Able-Afirm Item/Interrogatory Jig/Johnny
Nab/Negat Peter/Prep

U.S. Army/Navy 1941: Sail

[In similar alphabets: affirm, cast, hypo, inter, negat,
option, over, prep]

RAF 1942-43:

Apple Beer Charlie Dog Edward Freddy George Harry In
Jug/Johnny King Love Mother Nuts Orange Peter Queen
Roger/Robert Suga Tommy Uncle Vic William X-ray Yoke/Yorker
Zebra

[cf. aircraft in Dambusters raid: A-Apple B-Baker C-Charlie
E-Easy F-Freddie G-George H-Harry J-Johnny K-King L-Leather
(officially L-London) M-Mother N-Nuts O-Orange P-Popsie
S-Sugar T-Tommy W-Willie Y-York Z-Zebra]

U.S. Navy 1940:

Affirmative Baker Cast Dog Easy Fox George Hypo
Interrogatory Jig King Love Mike Negative Option Preparatory
Queen Roger Sail Tare Unit Victor William Xray Yoke Zed

Western Union:

Adams Boston Chicago Denver Easy Frank George Henry Ida John
King Lincoln Mary New_York Ocean Peter Queen Roger Sugar
Thomas Union Victor William X-ray Young Zero

British Army 1927:

Ack Beer Charlie Don Edward Freddy George Harry Ink Johnnie
King London Monkey Nuts Orange Pip Queen Robert Sugar Toc
Uncle Vic William X-ray Yorker Zebra

RAF 1924-42:

Ac Beer Charlie Don Edward Freddie George Harry Ink Johnnie
King London Monkey Nuts Orange Pip Queen Robert Sugar Toc

Uncle Vic William X-ray Yorker Zebra

Royal Navy 1917:

Apples Butter Charlie Duff Edward Freddy George Harry Ink Johnnie King London Monkey Nuts Orange Pudding Queenie Robert Sugar Tommy Uncle Vinegar Willie Xerxes Yellow Zebra

U.S. Army 1916:

Able Buy Cast Dock Easy Fox George Have Item Jig King Love Mike Nap Opal Pup Quack Rush Sail Tape Unit Vice Watch X-ray Yoke Zed

British forces 1904:

Ack Beer C D E F G H I J K L Emma N O Pip Q R Esses Toc U Vic W X Y Z

[The OED has a reference for Beer and Emma dated 1891]

1419. Yaesu CAT-control commands; does anyone have a list for me

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-17 00:00:00 UTC
From: "C. Roselaar (PA3FUN)" <pa3fun@ITsec.nl>
Message-ID: <35D88CC5.A05C77ED@ITsec.nl>
Source record: 164438

Hi,
Off course I do have the documentation with my FT-900,
but I just wonder..
can anyone provide me with a (digital)list of all CAT-commands for the
FT-900?\
Saves me a lot of work retyping You see...

Kind regards,
Christiaan PA3FUN pa3fun@amsat.org

>up a key and start transmitting, if nothing more than to practice. I think
>I have 5 wpm down and would like to put a 2n2222 rig on the air.
>

YOU CAN OPERATE CW WITH A TECHNICIAN LICENSE ABOVE 50 mhz.
No NEED for even trying the 5 wpm code exam for a tech to operate cw
in your allocation bands over 50 mhz.
At least here in the USA. try 6m cw or even 2m. You will need an all
mode rig or a cw only transmitter.

>cable... Am guessing that they will also program the TK-760 radio's???
>Does anybody know for sure if this is so and if so do you know how to put
>the 760 into program mode?
The cable will work for all PC prog. mobiles, but the soft ware is unique
for each basic style of radio. good news is that the software should only be
abt $30-40 or so.

I have no problem with the 730 but the buttons
>are different and the 730 doesn't seem to want to go into program mode.

If I remeber, the '30 series is put into prog mode by holding down the OPT
button as you turn it on. It should say PROG or PROGRAM on the display,
depending on which display you have.
The '60 series will automatically go into prog mode when the PC communicates
with it to read or prog it. Also, get the SERVICE manual from Kenwood.
There is a front panel prog mod for it, but its somewhat complicated, and I
don't remember how it went.

>If not any idea where one could find some software to program the 760's???
Kenwood...

x-no-reference:yes
ï¿½Tired of not being able to get on the air when the wife and kids are using the telephone or computer? Let my RFI Filters solve your problems for good. - Modular design - Simple install - Many in use in Amateur radio and CB service. $20.00 shipped USA check or MO. Rich Whiten, 343 Two Notch Trail, Easley, S.C. 29642. Or (864) 855-5206.ï¿½

If you are one of the persons who has been swindled by this party, at any time in the past or present, the Attorney General of the State of South Carolina would like to hear from you. Mr. Whiten has allegedly sold $20.00 electronic devices known as "RFI Filters" that contain nothing more than about 60 cents worth of useless surplus electronics parts. Mr. Whiten claims to have a ï¿½patent pendingï¿½ on these devices. That claim is false. A search of the US Patent database yields no such patent application or any past patent activity by Mr. Whiten. If you have purchased one of these devices then you should immediately demand that Mr. Whiten return your funds. If he refuses, then contact:

http://www.scattorneygeneral.org/contact.html

or write directly to:

info@scattorneygeneral.org

Mr. Whiten has a long history of shady dealings with hams and CB'ers. He is currently wanted by the state of Florida on an outstanding felony warrant stemming from his illegal business dealings in that state. Use extreme caution when dealing with Mr. Whiten. He should be considered armed and dangerous. He often boasts about carrying concealed weapons to hamfests and swap meets with the intention of ï¿½sending home in a body bagï¿½ anyone who he dislikes. He does not have a permit to carry a concealed weapon in any state nor does he have a license to do business in any state. To verify Mr. Whitenï¿½s penchant for carrying illegally concealed weapons at hamfests contact dtolassi@us.ibm.com

File your complaint against:

RICHARD L and IDENE WHITEN
343 TWO NOTCH TRAIL
EASLEY SC 29642 USA

In recent weeks, Mr. Whiten has recruited and employed several hireling amateur radio operators to post false testimonials that supposedly vindicate his ï¿½RF Filtersï¿½ and him. Take note that his paid cronies were responsible for all of the false ï¿½praiseï¿½ postings on the Internet. This can readily be ascertained by listening any evening on 3901 kHz LSB. You will find Mr. Whiten there, along with the identical persons who made the false claims for his bogus ï¿½RF Filtersï¿½. These hired accomplices are on Mr. Whitenï¿½s payroll.

++++++++++++++++++++++++++++++

FEDERAL VIOLATIONS

Please note that Mr. Whiten placed these advertisements:

ï¿½Sell: Texas Star 667DX solid state amplifier, 10-11meters 800 watts out. Has 1-2290 driving 4-2879's. Brand new $360 (can be made to run 2-30mhz.) Richwhiten@aol.com or (864) 855-5206ï¿½ [USENET]

ï¿½Custom built CB solid state or tube amplifiers for 10-11 meters. 400 to 8000 watts output. Send for pictures of my amplifiers or see them @ www.homestead.com/users/goodfellows6/goodfellows6.html Reasonably priced. Listen for me on 27.665 LSB using my latest 5 KW amplifier. Richwhiten@aol.com or (864) 855-5206ï¿½ [CB WORLD]

ï¿½FS- Texas Star S/S AMP 800 WATTS 10-20 meters can be made to run 10-160. Brand new in the box (really) richwhiten@aol.com or 864-855-5206 13.8vdc@ 75+ Aï¿½ [USENET]

Manufacturing and/or marketing of these amplifiers are a violation of U.S. federal law and grounds for revocation of Mr. Whitenï¿½s amateur radio license (WB2OTK). Mr. Whiten is a habitual offender that has previously been cited by the FCC for numerous offenses. These actions against Mr. Whiten include the issuance of an NAL for $10,500 for willful and malicious interference caused by one of his ï¿½custom builtï¿½ amplifiers. To file charges or issue a complaint contact the Federal Communications Commission at:

rlee@fcc.gov

Tell the FCC that you want Mr. Whitenï¿½s illegal activities to cease. Tell the FCC that you want all of Mr. Whitenï¿½s unpaid fines to be collected. Tell the FCC that you want Mr. Whitenï¿½s amateur radio license to be revoked for just cause. Tell the FCC that you want all of Mr. Whitenï¿½s illegal amplifiers and bogus ï¿½RFI Filtersï¿½ to be confiscated.

Hey Kool Ruler:

It is pretty clear the type of character KC8JBO is, his posts in the last month leave little room for doubt. Is there really some point in posting this filth here on rram? I mean it really means nothing to those here on this group. If the point is to somehow expose him or show what he is doing on other groups there is really no reason, the only people who have any interest in him are other flame throwers, please, let it die.

Jeff, when did I call the novice band the slums? That's where
I hang out. I make ten times as many CW QSOs as SSB QSOs.

If you are located somewhere in the middle of, say, NY and Jamaica, heres what you could do.

A). AM Radio, low power, 10,000 watts: This will give you coverage of a metropolitan area.

B). AM Radio, 50 kW. Will send your signal down through the east coast and the carribean in the night.

C). FM Radio: You will need around 100 translators. This will cost tons of money a year thinking of all the translators needed.

D). SW Radio: If you have a 50 kW Transmitter, you would get perfect coverage. Register a 9 or 11 MHz Frequency and you will be fine. This would cost $2300 a year for a license, I do not know transmitter costs, however much electricity is used.

E). Satellite Radio: Satellite Radio Space is expensive, but works well.

F). Internet Audio: Sending radio via the Internet is cheapest, and works best. However, many people in the Carribean do not have internet access.

Nope, wasn't me. The novice bands aren't a ghetto. If anything,
they are a wasteland. I rarely hear more than a couple of QSOs
in progress there. I hang out there on 40m because I enjoy 10wpm
CW QSOs. I've been hanging out there since high school.

Hey Chris... It burned me up too, a long time ago. In fact it such a fire under me that I learned code and got a *real* ham license - you know, one that let me do all those neat things.

It's very difficult to get used to the fact that today, when one wants something so badly, he refuses to find out what the requirements are and proceed to meet them. Instead they complain how naughty and evil the gov't is for making it so "hard". Funny, I don't remember it being so tough. Was even a bit of fun. Makes me wonder what things are coming to. People, that is.

Yes. DX4WIN does exactly that. In the Preferences settings you can state your
offset from UTC and the program will make the corrections automatically. Great
program... and fabulous support. There's a demo version available on the web
site: http:\\www.erols.com\pvander

>You know you are getting old when you end up on 75 meters & 160 meters
>hi hi. Something about the older you get the longer the antenna.....
>Wonder what Freud would have said about that....

Well, I'm a young 44 and I'm building a 160m xmtr; the antenna will be a looong wire strung from the ocean-front 10th floor condo (had to include that) to a palm tree on the beach, a good 150 feet. If age and antenna-length are proportional, I'll be Hawaii's 160m DX champ in another 20 years! =:o

>Yep.... All those radio salesmen need to sell more radios. My radios
>are pushing 20 years old....those guys would starve with Hams like me. I
>guess they figure if radio sales go down then Ham radio is dead....

Now Don, I'm rebuilding a *40 year-old* Globe Scout xmtr; I can't afford 20 year-old radios. The "youngest" HF radio here is a Galaxy GT-550 (30 years old).

(WTB: 6146 and 6LB6 tubes at $reasonable$ prices!)

Welcome to the Auxiliary Communications Service Newsletter, developed by the ACS Training Unit of the State of California Governor's Office of Emergency Services. Please visit our ACS Home Page at http://acs.oes.ca.gov

The purpose of this weekly newsletter is to bring those of us in emergency communications closer together by sharing common ideas, and by introducing new technology into the emergency services community. All individuals with an interest in emergency communications, disaster preparedness or helping the community at large are encouraged to participate here in an open forum.

You will find a virtual community here, with representatives from many different organizations with the same common goal: emergency response. We encourage everyone, from whatever organization you represent (or just yourself!) to bring us your ideas, suggestions, concerns, manuals, handbooks, or opinions so that we may share them with the group. To those of you who have just joined us, welcome aboard! Newsletter Members: <674>
.....

>From the Editor's Desk:

Had a great time this last week meeting friends at the 64th annual Association of Public Safety Communications Officers (APCO) Conference and Exhibition, August 9-13 in Albuquerque, New Mexico. The hospitality extended by the NMAPCO folks was greatly appreciated. Several of the State ACS HQ staff attended, and we had the chance during the conference to conduct some needed ACS business.

Sadly, one of our friends of the Newsletter, Jeff Thomas, of the City of San Jose, CA GSA Radio Services Branch and his wife were involved in a traffic accident Friday in Albuquerque. Jeff's wife was killed in the crash and Jeff was badly injured. We extend our condolences to Jeff and his family on his tragic loss.

George Bradford, a recently retired fire captain with San Jose Fire, also had a tough time in Albuquerque, getting his GMC Jimmy totaled in another traffic collision. George is now back in California, after a long train/bus/train/bus trip. George is a little bumped and bruised, but he'll be OK.

On a lighter note, hope everybody had fun this weekend at the ARRL convention in San Diego. Mark your calendars for the upcoming Pacificon '98 convention October 16-18 at the Concord, CA Airport Sheraton hotel. For more information, email pacificon@designlink.com, see the Pacificon '98 Home Page at http://www.mdarc.org, or call their Hot Line at (925) 932-6125.

The Staff page on the ACS Home Page has been taken down for some
needed remodeling. If you have questions or are trying to locate a particular
staff officer, contact OES Telecommunications Coordinator Ben Green at
(916) 262-1603.

Stay safe everybody -- see you next week! -- Dave Larton, Editor

What's New on the Web:

From: Jim Maxwell <jmax@ibm.net>

Major Amateur Radio License Restructuring Proposals Announced:-

In the last three weeks, two major US Amateur Radio License
Restructuring proposals have been announced - one, the most recent, by
the FCC, and one earlier by the ARRL. Because of the current complex US
license structure and these announcements, it is probably inevitable
that there will be a major restructuring. It is now YOUR turn to express
your views about the future of Amateur Radio licensing and related
topics in the US!

<snip>
Significantly, the FCC set a longer-than-normal comment period. The deadline for comments is December 1, 1998. The deadline for reply comments is January 15, 1999. The FCC is encouraging electronic comments via the WWW at http://www.fcc.gov/e-file/ecfs.html; by email at ecfs@fcc.gov (for instructions, include in the body of the message the words - "Get form <your email address>". Of course, written comments prepared in the traditional way and sent by US mail will also be accepted.

A copy of the complete NPRM has been posted on the ARRL Web page, http://www.arrl.org, and at the Pacific Division Web page at pdarrl.org. The FCC NPRM can also be downloaded from the FCC Web site in Word Perfect 5.1 and Text versions at:
http://www.fcc.gov/Bureaus/Wireless/Notices/1998/fcc98183.wp
http://www.fcc.gov/Bureaus/Wireless/Notices/1998/fcc98183.txt
respectively.

October QST will carry the full story on the FCC NPRM, as well as an editorial on the subject. -- ARRL Pacific Division Update
.....
This week's EMCOMM Bulletin:

EMC 145 Working with Government 2/2 8/17/98

A belief among some volunteer groups is that they serve only one particular function. When a group maintains this philosophy, it's easy to sell itself short in several ways, one of which is hidden.

Examine your group's roster. No doubt you'll find computer engineers, truck drivers, administrators, forklift operators, professional managers, and others among the group. While it's agreed that you normally provide some type of communications function, the participants in your organization have abilities that can be utilized by the agency that you wish to serve.

The startling fact that lies hidden in this situation is this: use of the unique abilities in seeming unrelated fields by your communicators can and does open doors to future communications opportunities.

So how do you take advantage of this phenomenon? Make an inventory of the experience, abilities and interests of each and every person in your organization. Then find ways that these talents, skills and experiences can subtly augment the needs of the served agency on an occasional basis. Get the agency WANTING the help your personnel can provide. After all, everyone wants benefits. Not only will this process benefit the served agency, it will make it easier for you to identify and recruit specific members for specific projects based on their prior experience.

For instance, if the served agency needs drivers during an emergency, and the philosophy of the group is, 'we only talk on radios', both the agency and the group will ultimately suffer. Assuming there is a qualified driver in your group and you fail to offer the skills of that person (assuming that person grasps the potentials and is willing to so serve) then you've lost an extremely valuable opportunity. Not only will the agency lose the expertise of valuable volunteers, the group will lose the opportunity of aligning with the agency in a way that could ultimately lead to increased communications opportunities, recognition and support by the local government.

If this sounds like a strange paradox, it is. What we are sharing here is the combined experience of many who have and do work in this arena with government agencies. Try it. We know for a fact, that it works - and very successfully!!!!!! If we've not fully communicated the concepts here, ask for more information!!

The process recommended here is, in reality, a day to day effort. Volunteers need to align themselves with the served agency BEFORE the calamity strikes. When the incident occurs, the agency will tend to utilize a known commodity, as opposed to those who just show up.

Every effort should be made to acquaint the group with the served agency (and the needs of that agency), before disaster strikes. When both the agency and its communications unit are used to functioning as a cohesive team, both profit from the experience.

The recon vehicle just returned, and the mission was successful.
James O'Brien
3910 Hiram-Sudie Road
Hiram GA 30141
Said dwelling appears to be an old one story farm house with very
faded red paint. The dwelling appears to have been the victim of a
highway widening project several years ago, as it now sits approximately
six feet from a very busy two-lane highway. Residents of this dwelling
apparently enjoy the sounds of heavy traffic, day and night. Two very
long and deep skid marks were observed in front of the dwelling, as if
someone left or arrived in a hurry. There is no garage, only a rusty
carport shelter. Antennas of every description are on and around the
house, verticals, long-wires, etc. At least two antennas appear to
have been pulled up in trees by means of rope, where they swing in the
wind. A DBS dish was in the back yard. The grounds were very poorly
maintained and need of landscaping. Two vehicles were in the rusty
carport, one red Ford T-bird and one black T-bird. The black T-bird has
a busted out passenger window. Both vehicles appeared to be in poor
condition

If all you want is the correct time, and not specifically the Heathkit clock, take a look at the "TAC" kit that TAPR sells. See

www.tapr.org

The TAC uses the GPS satellites as a source of timing information, and is *much* more accurate than the old Heath clock ever was - less than a microsecond error if you choose the right GPS unit, and a few microseconds error if you choose the cheapest GPS. You still may need a display of some sort, but a PC running "showtime" or "Tac32" will do that.

Dave

Yea, I figured you wouldn't. You don't want to have amateur
newsgroups see what you are doing as you can't fool them with your
false statements like you have been able to do to the
scanner listeners!

Tell the amateur newsgroups about your "Pottersville Amateur Radio
Group"
that you claim has 30 members, but you can only name 2 of them. Tell
them about how you are the president, secretary, VE testing chairman,
membership offficer, & what ever else you claimed! (You statement
about VE testing was really funny since you are only a TECHNICIAN!)
Tell them that even though the ARRL has never heard or or recognized
your club & that a search of YAHOO does not bring up anything about
it that you claim your club is still legit!

Well, you make a good point for 5 wpm as a requirement, so that the experimenter has a good base. But what logic would you use for code requirement faster than 5 wpm?

I love to tinker, yet I am a no-code tech. It bothers me that I cannot pick up a key and start transmitting, if nothing more than to practice. I think I have 5 wpm down and would like to put a 2n2222 rig on the air.

I have seen too many code appliance operators around to be pro-code advocate. For code to be a barrier to the tech types and allow these guys to have all the DX fun sort of burns me up.

I'm surprised that you would be so unsophisticated as to lump a minor ham radio licensing qualification with rules concerning the security of our country which are in place with the aim to prevent such things as terrorism. I hope this is posturing and that you are are really not that obtuse. Why is it that its almost universally no-code advocates posting here who wish the rules would go away?

1479. Bearing and Direction Software

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-17 00:00:00 UTC
From: BColenso@aol.COM
Message-ID: <fae61361.35d83724@aol.com>
Source record: 164571

In a message dated 98-08-16 14:17:09 EDT, Jim - WB4QBW wrote:

<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<
I'm looking for software that will run under Windows '95 that will do
point-to-point calculations from two latitude and longtitude
positions. To calculate bearing and distance. I'm sure there is such
an animal out there, any help would be appreciated.
>>

I'm several days behind on my e-mail, so I'm sure someone has suggested some software by now. However, this is my response to the same question some time ago. Hope it helps.

From time to time, on this and other lists, I read about someone wanting to calculate the *great circle distance and bearing*, given two stations latitudes and longitudes. The ARRL Antenna Book has a set of equations that does just that.

First, lets set some ground rules. Northern latitudes are positive, southern latitudes are negative. Also, western longitudes are positive, eastern longitudes are negative. Also remember that subtracting a negative number is the same as adding them
[2 - (- 2) = + 4].

The equations are as follows:

cos D = sin A sin B + cos A cos B cos L

and

$$\cos C = \frac{\sin B - \sin A \cos D}{\cos A \sin D}$$

where:
A = YOUR latitude in degrees
B = latitude of the other station in degrees
L = YOUR longitude minus that of the other station
D = distance along path (in degrees of arc)
C = true bearing from north if sin L is positive,
If sin L is negative, true bearing is 360 - C

Now let's put in some numbers. I live near Detroit, MI
(42.3 N 83.0 W). Lets say I want to *talk* to someone in
Adelaide, Australia (34.9 S 138.6E). So:

cos D = sin A sin B +cos A cos B cos L

= (sin 42.3 x sin -34.9) +
(cos 42.3 x cos -34.9 x cos 83.0 - [-138.6])

= -0.838683

D = 147 degrees of arc (on the Earth)

To convert degrees of arc to miles, multiply by 69.041.
To convert to Kilometers, multiply by 111.111. So Detroit
to Adelaide is 147 x 69.041 = 10149 miles.

The compass bearing is:

$$\cos C = \frac{\sin B - \sin A \cos D}{\cos A \sin D}$$

$$= \frac{\sin -34.9 - (\sin 42.3 \times \cos 147)}{\cos 42.3 \times \sin 147}$$

= 0.01914

C = 91.1 degrees

Since L = 83.0 - (-138.6)
= 221.6
And
sin L = -0.664

Then TRUE C = 360 - 91.1
= 268.9 degrees (Almost due west)

These equations do have limitations. One is when the two points are very close to each other. The other limitation is when the two stations are on EXACT OPPOSITE sides of the world, in which case D = 180. The sin of 180 degrees is ZERO, which would make the denominator of the second equation go to zero.

For long path work, the bearing would be 180 degrees opposite from that obtained above.

There are other ways of coercing - witness the IRS. My dictionary says
that "enforce" is a synonym of "coerce". The Morse code requirement
is certainly "enforced".

I explained that above. For anyone who valued buggy whips, the
demise of horse and buggies was unacceptable. For anyone who
valued slide rules, the rise of the portable calculator was
unacceptable. Time and progress marches on. Finding that
unacceptable and a buck will get you a cup of coffee.

I use HyperLog and there are no problems in doing what you want.
You just set the correct offset between your local time and UTC, then the
program will log the QSO's with the time you want.

>ear; that may bother you, but it's a fact.

It doesn't bother me, but it does demonstrate that amateurs doing it are
not using the minimum power possible. That in turn means that they aren't
working to the best of their capabilities, aren't making the most effective
usage of the spectral resource, and are contributing excess QRM.

Of course it is still a free country, and I don't presume to demand that
everyone use the best methods, but I think it only fair to make them
aware that their choices do have an impact on others attempting to
use the common spectral resource.

>What NASA is able to do in
>deep space is not going to make QSB and lightning-generated QRN go away;

The techniques don't make skywave multipath and burst noise go away, but
the sorts of techniques we are discussing, not limited to those used by NASA,
will allow you to operate *despite* those channel impairments. In other words,
when you're forced to give up with manual OOK Morse, you can still continue
to communicate using some of these other techniques.

>machines may do better than my ear, but I *want* to hear the other
>fellow's voice or fist - no amount of what NASA or the military does
>with its SOTA gear will change my desire to hear the other person.

It's a free country, you can limit your capabilities if you choose to do
so. Amateurs aren't required to use the best techniques, though it is
certainly to their advantage to do so.

>>The important thing to understand about Voyager and Pioneer is that they

>runs counter to the work of the NASA and military communications engineers
>is of no concern to this hobbiest. They have taxpayer money and academic
>degrees in communications engineering; I have neither.

As I noted, better techniques than OOK Morse needn't be expensive, nor
complicated to build. As I've noted several times, the difference between
a FSK setup and an OOK setup is completely trivial. You can even send
Morse using FSK, and the ear/brain can be trained to decode it with better
facility than OOK. But of course using a uniform code carries a heavy
advantage over Morse, and is well worth the minimal extra complexity
of a machine decoder.

Only one or two chips are necessary to produce a very good decoder for
a fully voiced uniform code, at least 9 db better than by ear OOK Morse,
and much better than that under some conditions. It is even possible, with
the addition of one more chip to translate the message conveyed by the fully
voiced uniform code as a perfectly keyed and noise free Morse audible output
if you insist on copying that way (though that same chip could be programmed
to drive an LCD display instead, thus using the much more efficient and capable
visual channel to communicate with the operator).

Now you don't have to be a degreed communications engineer to do this.
You can build this sort of system in a completely cookbook way if you
choose. But you'll understand it better, and gain some beneficial insights
into the reasons it works better, if you're willing to learn a little bit about
information theory and signal design. The concepts aren't really that
esoteric, though they are sometimes surprisingly different from what
"common sense" would seem to indicate. That just demonstrates
that "common sense" isn't always sense. The universe is a bit more
subtle than that.

>>>That you desire to constantly compare amateur radio to NASA (or to the
>>>military) just shows you live in some fantasy world, wanting to emulate
>>>something you're not. Come back down to Earth, Boys.

>
>to complete their missions; it would be a rare amateur QSO in which
>the success of one's communication would make a difference in national
>security, or the loss of a multimillion dollar space project,

It is extremely rare for an amateur communication to have a life or death impact, but emergency communications *is* one of amateur radio's charter purposes, and it would behoove amateurs to equip themselves to do it in the most effective ways possible. Services whose primary mission focus is life or death no longer choose OOK Morse, and neither should we. (And in fact we don't. Most amateur emergency communications is tactical in nature, and is better served by the immediacy of voice, or logistical in nature and better handled by bulk data transmission techniques. But on rare occasions, we may need to communicate on HF under extremely harsh conditions to get an emergency message through. In that case, we need to use the best harsh signal environment techniques available.)

>>NASA for weak signal work, and the military for operation against a hostile
>>jamming background. The techniques they use can have application
>>to amateur radio operation as well. Often we need to operate under weak

>>interference situations which are similar to the military jamming problem.
>
>For QSOs conducted by ear, we have the option of turning off the radio;
>neither NASA nor the military have such an option.

For *recreational* usage, that's certainly true. Our charter calls for us to go beyond mere recreational usages to justify our spectral occupancy, however. Learning about, and using, better techniques fits our charter educational goals, and supports our emergency communications goals. It may even contribute a bit to advancing the art.

>>It is a pity that we have to look to these agencies for examples of good
>>techniques. At one time amateur radio was the pacesetter for this sort

>
>Of the million or so amateurs of this century, only a fraction of a
>percent conducted R&D - these were not the bakers, bankers, bricklayers,
>and barbers, but rather the Collins and Yagis whose profession was RF
>engineering and who had corporate/campus labs at their disposal.

That does appear to be the common myth, but surprisingly few of the circuits and techniques in common usage throughout radio history originated in corporate or university laboratories. Now it is true that most amateurs are not innovators, but some have always been innovators, and some of the rest have been early adopters, trying out and proving out the techniques developed by those few.

Sturgeon's Law says 90% of everything is dreck, and that applies to amateur radio as much as to anything else. But it is that 10% which makes the difference. They are the ones who ultimately show the way for the rest to climb down from the trees and learn to walk upright. That's the nature of the human condition.

1493. Bill Clinton to join ARRL after resignation

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-18 00:00:00 UTC
From: hpm_1aw@my-dejanews.com
Message-ID: <6rce1ikis1@nnrp1.dejanews.com>
Source record: 164386

Full-text of President Clinton's speech last night with notes

THE ASSOCIATED PRESS
Good evening.
This afternoon in this room, from this chair, I testified before the Office of Independent Counsel and the grand jury.

(hams sit in chairs in one room in front of microphones for hours on end)

I answered their questions truthfully, including questions about my private life, questions no American citizen would ever want to answer.

(hams selling used equipment hate answering questions)

Still, I must take complete responsibility for all my actions, both public and private. And that is why I am speaking to you tonight.

(hams love quoting legalese)

As you know, in a deposition in January, I was asked questions about my relationship with Monica Lewinsky. While my answers were legally accurate, I did not volunteer information.

(hams need to pay a pro for nookie and once again, are shiftless at hamfests)

Indeed, I did have a relationship with Ms. Lewinsky that was not appropriate. In fact, it was wrong. It constituted a critical lapse in judgment and a personal failure on my part for which I am solely and completely responsible.

(unlike Bill hams apologize and thank EVERYONE)

But I told the grand jury today and I say to you now that at no time did I ask anyone to lie, to hide or destroy evidence or to take any other unlawful action. I know that my public comments and my silence about this matter gave a false impression. I misled people, including even my wife. I deeply regret that.

(hams tell their wives "I'm almost done on the radio, one more minute dear")

I can only tell you I was motivated by many factors. First, by a desire to protect myself from the embarrassment of my own conduct.
I was also very concerned about protecting my family. The fact that these questions were being asked in a politically inspired lawsuit, which has since been dismissed, was a consideration, too.

(the post contest woes of a man who was disquailified from ARRL DX)

In addition, I had real and serious concerns about an independent counsel investigation that began with private business dealings 20 years ago,

dealings, I might add, about which an independent federal agency found no evidence of any wrongdoing by me or my wife over two years ago.

(FCC investigated Bill too but as usual couldn't do any enforcement)

The independent counsel investigation moved on to my staff and friends, then into my private life. And now the investigation itself is under investigation. This has gone on too long, cost too much and hurt too many innocent people. Now, this matter is between me, the two people I love most - my wife and our daughter - and our God. I must put it right, and I am prepared to do whatever it takes to do so.

(Same words used by Dave Sumner on restructuring)

Nothing is more important to me personally. But it is private, and I intend to reclaim my family life for my family. It's nobody's business but ours. Even presidents have private lives. It is time to stop the pursuit of personal destruction and the prying into private lives and get on with our national life. Our country has been distracted by this matter for too long, and I take my responsibility for my part in all of this. That is all I can do.

(The FCC biennial review is a trying event for us all)

Now it is time - in fact, it is past time - to move on.
We have important work to do - real opportunities to seize, real problems to solve, real security matters to face. And so tonight, I ask you to turn away from the spectacle of the past seven months, to repair the fabric of our national discourse, and to return our attention to all the challenges and all the promise of the next American century. Thank you for watching. And good night.

(Bill is using the internet instead of ham radio these days too)

Am I the only one who believes that Liberty Net is a bad example of ham radio?! When I turned on 3950 last saturday night I was disgusted whith the garbage that was spread over the air waves. I was thinking of applying for a ham license, but after hearing that I have second thoughts, afraid of being associated with those people.

One thing I did learn from Liberty Net, it can't be hard to get a license if those people can get it.

The Feds like to make rules but see enforcement as beneath them.
Look at how they try to get the states to do the enforcement for
them. Usually the badges are used more to get good tables at
restaurants than enforcement.

Think about this. You could go down to the local county prosecutor
and swear out of complaint against someone you and others that
you have seen breaking the law. It might be acted on. Now, why
not go to the US Attorneys office and swear out a complaint against
those who are jamming? If you have witnesses and proof, they will
listen. If it needs support, they will call the FCC to provide it (won't
that piss the FCC off). While FCC has used administrative law
judges to handle complaints, it still could go to the circuit court.

Burt, a lot has changed since 'Nam. Satellites are doing all the
long haul. RTTY is gone, replaced by a Cellphone like system
that includes voice and data (and FAX). The SINCGAR system
has replaced the old FM equipment (PRC-77, VRC-524) and
is frequency hopping. AND everything is encrypted.

We don't even do Morse intercept anymore. That is done
by computers.

Most of the equipment has been recently updated. The last
of the 1964 equipment was done away with in Saudi.

Burt wrote in message <6pf1l3$r57$1@as4100c.javanet.com>...

I have a number of hams express their lewdness
on the air. In the middle of a conversation,
they will say, "let me drop it!"

Why are they so gross?

Please visit my World Wide Web Site, you have never seen a page like it.
You will see:

1. Drivers for your new hardware
2. A naked blond chic.
3. Answering machine audio that you can use on your machine too!
4. The writings of me and others on ham radio, hear a typical ham contact.
5. The warm side of K1OIK, hear me speak, see me with famous people.
6. A test for your SVGA monitor
7. Pictures of me and my family.
8. The "Real Stuff" Germans are made of or not?
9. See now the future of ham radio.

Burt Fisher Teacher of video, broadcasting and electronics

> transceiver for around $1000 USD. What would people recommend in this
> price range?

There aren't a lot of good new rigs in that price range, but some very
good used equipment can be had around $900-1100.

Some candidates would be Icom-761, 765, Yaesu 890, 990, Kenwood 850, 940,
early 950's.

Shop around, including places like Burghardts, AES, etc.

73 and tight lines,

Hans, K0HB

I have always used various wire sky hooks and still do. However, last year the yagi beam bug started chewing on me and I launched a 10 meter monobander and a tribander last spring. I love the beams but have noticed considerable bacon and eggs when it is raining, quite a bit more than the various wire antennas. (N1MSV sky hooks on my home page) I have been very careful about the proper placement of traps for gravity drainage. Is it a common experience for big time rain noise on yagi's? After the rain stops the noise remains until the antennas dry in the wind. Coax has been checked for H2O contamination and they are dry as a bone. I learned the hard way several years ago how to properly water secure connectors!

I have a Vertical antenna I received in trade about 12 years ago. Been in storage for the last 10 years. Markings are all wore off. I think it is a 14avq or 18avq. It is a 4 band vertical (10,15,20,40) with an extra coil/whip that screws on top for 80, turning it into a 5 band vertical. I'd like to put it up, so would like some documentation to help me preset the section lengths. Luckily I marked the sections so I can tell which coil goes where.

Thanks!

To all radio amateurs

SB QST ARL ARLB058
ARLB058 Section Manager election results

Kevin M. ''KB'' Bunin, K4PG, has been declared elected as Southern Florida Section Manager. Bunin, who lives in Delray Beach, topped a field of three candidates for the post with 827 votes. Ed Petzolt, K1LNC, got 691 votes, Neil H. Lauritsen Sr, KA3DBK, got 400 votes. Ballots were counted August 18 at ARRL Headquarters.

Candidates in nine other ARRL sections ran unopposed and were declared elected. They are:

In the Connecticut Section, Betsey Doane, K1EIC.

In the Idaho Section, Michael Elliott, KF7ZQ.

In the Minnesota Section, Randy Wendel, N0FKU.

In the North Dakota Section, Roger Kurtti, WC0M.

In the Oklahoma Section, Coy Day, N5OK.

In the Ohio Section, Joseph Phillips, K8QOE.

In the Puerto Rico Section, Raul Escobar, KP4ZZ.

In the Virgin Islands Section, John Ellis, NP2B.

In the Western New York Section, William Thompson, W2MTA.

All elected candidates take office October 1, 1998.

Vermont got a new section manager on August 14. Bob T. DeVarney, WE1U, of Milton, succeeds Bernie Capron, N1NDN, who stepped down.

I won't argue that there aren't digital modes which are better than CW, But all you need to copy CW is a pencil & paper. Now, If other digital modes are to replace CW, then I propose that all prospective hams need to own a computer and buy a $300 dollar multi-mode TNC before their license can be issued. I've never met anyone who could copy RTTY or packet in their head.

CW makes it more difficult to obtain a license, people generally appreciate things more when they are difficult to get. Having the license handed to you on a silver platter cheapens the hobby and invites trouble.

If you had to build a transmitter due to an emergency situation, a CW transmitter is easiest to build, and can permit worldwide communications even in the toughest band conditions. Try that with your pactor.

When CW is eliminated, then CB will increase by nine "new" bands and you'll hear "echo boxes" & "roger beeps" on your $1,000 rig as you attempt to work your best friend on pactor, and you shut off your rig in frustration.

Long live the KING, Long live CW!!!

1513. Help, $$$ research on radios vs salary in the 70's

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-18 00:00:00 UTC
From: nw2m@qsl.net
Message-ID: <6rcufc$a2b$1@nnrp1.dejanews.com>
Source record: 164406

Think back.... managers....

Radio prices vs salary during the 70's.

I continue to build information on the Yaesu FT-101 web page (http://www.qsl.net/nw2m/ft101.html) and need information on exactly how much it
costs to buy a new rig....,actually, how much did you have to spend.

I would like to know what a new graduate's salary would be in the technical fields during the 1970's and a comparable 20 year veteran for the same year. The reason for this is to see how much a radio costs with respect to income during this period (1970-1980). Here is the link to the costs of Yaesu FT-101 radios: http://www.qsl.net/nw2m/ft101.html#prices

It would be neat to see what percentage of salary was needed to buy a new rig then vs. today. I think QST did something on this 10 years ago.

At the classic age of 21, I graduated in 1978 and had offers between $17k in Texas to $21k in Michigan for a BS in Computer Science degree. I have no idea what a 20 year made during this era. I just passed my 20th year this spring, and am outside of the 1980 cutoff my inquiry.

I need ranges of salaries (not yours) and in what technical area (computers, electronics, etc.). No names need/will be mentioned, and you can email me direct to: mailto:aor@gteais.com I will average the data and add this as a percentage to the top of the "What did it Cost" section to my web page.

Thanks in advance. Any help is a BIG help. If there is a link to labor statistics in the 70's... all the better.

I will keep you posted on this info as it is posted to the page.

73,

Al, NW2M
Keeper of the FT-101 web page

Adam.....3 days is not very much of a time to do much on the bands...I
have seen the bands stay dead for longer than that.
Study the computer code programs to get your speed up as that is about
what you will listen to on your test.
Most of all do not get discourged...I flunked the code on my first try
as I had never heard a code tape before and that was what the FCC used
for thier tests....I have ham friends who took the test a few times
before passing, one of who took the test 5 times before he passed
Years back when you appeared before the FCC you took the code first
then the written test. you had to pass the code first period and then if
you flunked the written test you waited 30 days and tried again.
Then if you passed the code and flunked the written....Come back in 30
days and start all over...code then written test...Was a chore !!
Hang in there and you will make it and be real proud of your self for
doing it. Its a lot earier now that it was when I got my ticket.
Wish I was near by to help you but look on the internet to see if there
are any elmers near you...

Swisslog for windows can do this. You can enter the difference between
UTC and your local time but you can also stop the automatic insert of time
and do it yourself.

Pure Bullshit! You need a transceiver just like any other RF mode. Most
modern transceivers have computers built in. On top of the electronics
needed to send/receive CW, which is identical in kind to the electronics
needed to send/receive digital modes, one needs to spend many hours learning
how to emulate a modem. If all that floats your boat, feel free. Just don't
expect the rest of the human race to share your likes and dislikes.

> If you had to build a transmitter due to an emergency situation, a CW
> transmitter is easiest to build, and can permit worldwide communications even
> in the toughest band conditions. Try that with your pactor.

An FM transmitter is just as easy to build and would allow local emergency
communications which would alleviate the delay in someone halfway around
the world applying for a visa so they can come to your rescue.

I sometimes give up on CW, turn the problem over to PACTOR, and
go to bed. When I wake up, all refreshed, a perfectly formatted
PACTOR message is waiting in my mailbox. PACTOR is my backup for CW.

CW is useful and fun for some people. You don't have to tell falsehoods
about CW's impossible capabilities or trash the other modes. Let
everyone who wants to use CW, use it. What is wrong with live and
let live?

W6RCA is another blithering idiot, (A new candidate for the ARRL Board)!!!

For any aspect of ham radio you need a transceiver or separate TX - RX.

For digital you also need a modem and something to handle the protocol,(either
a computer or the firmware of a TNC.

Cecil, w6rca@ibm.net stuck his head up his ASS when he wrote:

>Pure Bullshit! You need a transceiver just like any other RF mode. Most
>modern transceivers have computers built in. On top of the electronics
>needed to send/receive CW, which is identical in kind to the electronics

>
>> If you had to build a transmitter due to an emergency situation, a CW
>> transmitter is easiest to build, and can permit worldwide communications even
>> in the toughest band conditions. Try that with your pactor.

Cecil then tried and failed to pull his head out of his ASS when he wrote:

>An FM transmitter is just as easy to build and would allow local emergency
>communications which would alleviate the delay in someone halfway around
>the world applying for a visa so they can come to your rescue.

The FM TX is still more complicated and also requires a more complicated
receiver. Most shortwave receivers don't have a discriminator, but many do
have a BFO. I suspect the reason why someone would build a cw tx is because
the EMP would destroy thier other ham equipment.

Cecil displays the motivation of the No-Code movement when he writes:

>I sometimes give up on CW, turn the problem over to PACTOR, and
>go to bed. When I wake up, all refreshed, a perfectly formatted
>PACTOR message is waiting in my mailbox.
>
The motivation is called: LAZINESS!

Photon Torpedo wrote:
> For any aspect of ham radio you need a transceiver or separate TX - RX.

Exactly! CW cannot be done with pencil and paper alone as was alleged.
If you guys would just avoid all those outrageous claims for my favorite
mode, I would not have to challenge your myths. My feelings are also with
CW, but my rational mind is that of an engineer who knows faith is
not a tool of knowledge. CW is not some metaphysical miracle. It is a
mode, and like any other mode, is subject to the laws of physics. CW
does not always get through. If you cannot hear it, you cannot copy it.

> Most shortwave receivers don't have a discriminator, but many do
> have a BFO. I suspect the reason why someone would build a cw tx is because
> the EMP would destroy their other ham equipment.

Said destruction including those BFOs. All my shortwave receivers have
discriminators. One of my spares is packed in a metal trunk and the
other in the metal tool box on my pickup.

It does not take a 300$ multimode TNC use CW digitaly or to
use other digital modes. They help under some condictions of couse.
A simple sound card can do the trick.

>issued. I've never met anyone who could copy RTTY or packet in their head.

True enoungh statement. CW makes it more difficult to obtain
a license.

>things more when they are difficult to get. Having the license handed to you

Why do you want them to focus on the stupid license? The
license is the least valuble thing we hams gets out of ham Radio. (I
hope that is genraly true, I am not certain that is the case with some
people and that is problem)
>on a silver platter cheapens the hobby and invites trouble.

Five wpm is no code. A cub scout can learn Morse code at 5 wpm in a
week.

I just want to say that I have used LOG-EQF for several years and it is great.
You will not find another program that is supported by the writer as well as
this one. Tom does a great job.

Well, we all know that 'nam is long over, and we also know that ther are more birds (satellites) in the sky than we can count. And I have two comments about this.
1.)Ham radio has use of satellites, but for short periods of time, and they are hard to use. Either tracking the bird, or following the doppler shift is not easy, but anyone that can hold a microphone can do it.
2.) it only takes a few missiles to take many of them down. Then where are we?
Like Burt said, if you have no resources other than limited battery power, the only efficient mode is cw. Running an inverter for a computer for say packet, or fm and even SSB is not the mode of choice in that scenario.
Now on the other hand, if there is plenty of resources, packet will be an excellent choice for moving messages. Or even atv for damage asessment. Each disaster has its own proper applications.

Tkx, although aware of it I find that on the average web sites tend
to provide all kinds of info but the one you have need for. Try looking
for an exact definition of where and what Part68 is all about at the FCC web
site or simple instructions on how to change the administrative source
name for a domain at the Internic site; painful for the average user (I find
myself to be one when it comes to radio networks). Although the arrl
site is high on my list of sites to fully read I doubt it can be a source for
that info as an index search on their site provides nothing close to the
subject when looking for info on repeaters. I digress.... ;)
Your reply is appreciated nevertheless.

>Brad N5IQ

On another topic I need for a local place to educate me in the
use of a couple of used Motorola cellular phones (model: TELE T-A-C 200) if
you have a manual or know who to call in town a reference will be
appreciated. Who in town can solve your questions or repair telephone
units?

Would someone clarify this; can a follow-up be made to a group
not part of the newsgroup line for a post? IOW can I followup to a
different newsgroup not in the main header?? I guess I can find out a
little later; however, if someone knows the answer will be welcomed. TIA

Keep in mind that this is a beta posting and the faq will be re-written and cleaned up over the next couple of months. This is just a first draft. Any suggestions, please feel free to e-mail me, my address, and info on how to un-anti spam it, is on my sig below.

-----begin file-----

FT-50 software mod faq v.01

This faq was written based on an article by another who's name was lost. Credit for the idea goes to that person, but some credit goes to me for re-writing it into a simpler and easier to understand form for those unfamiliar with hex editors.
The following information is based upon exploration and tests performed with an FT-50 with 6H07 as the first four serial numbers, and ADMS software v1.04 for Windows.
Legal stuff: Transmitting outside of legally allowed bands is quite illegal, so just don't do it. This is even true if you have a liscense to operate on other bands and have other business radios that do that. The FT-50 isn't type accepted to x-mit on any other band other than amateur freqs and for MARS / CAP use.
By performing any of the following mods, you take full responcibility. If you get caught doing anything illegal or if you screw up your radio, don't come whining to me, it's your fault, not mine.

Now, the faq:

q.) What is the software modification and how does it differ from the hardware modification?

a.) The FT-50 is rather unique in the fact that unlike other radios where a series of diodes or resistors that connect to the CPU from outside of it and specify what frequencies the radio can operate on, the FT-50 stores this information as a series of two bytes of information in it's RAM in the CPU. No hardware is used at all to specify or control these bytes. The hardware mod above does nothing more than let you change these bytes with a menu system built into the radio. Removing the chip resistor in and of itself dosen't free anything up other than letting the user access this menu system.
Removing the blob of solder governing the MARS/CAP access is another thing. This is the only mod that is hardware affected. But it is possible for one to not FrEEband the radio but instead MARS/CAP the radio by the same software mod. But this dosen't change the country settings or let one switch to FrEE mode like the true software mod does.

For the software mod all one needs for tools is a Hex editor for
their computer, a personal computer, and the ADMS-1x interface kit.

q.) Hex editor, What's that?

a.) A hex editor is a program to edit a computer file at it's most
basic level, the individual hexadecimals.
Hexadecimals work like this: thay're just like the standard numeric
system, but they go a little farther. Like 0,1,2,3,4,5,6,7,8,9 then
repeating is what we're all familiar with, but hex numbers work like that
but 0,1,2,3,4,5,6,7,8,9,A,B,C,D,E,F then repeating. So 45 would be 2D in hex
or 2Dh. 157 would be 9Dh, 07 would be 07h, etc. The calculator that comes
with Windows does hex conversions so you can play around with them.

q.) How do I use a hex editor?

a.) Here's a crach cource for hex editors, you can read the readme and
help files that come with the editor to learn how to use it in more detail.
When you open a file, you'll see the following:

00000000 47 49 46 38 39 61 01 00 01 00 80 00 00 FF FF FF
GIF89aï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½
00000010 00 00 00 21 F9 04 01 00 00 00 00 2C 00 00 00 00
ï¿½ï¿½ï¿½!ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½,ï¿½ï¿½ï¿½ï¿½ï¿½
00000020 01 00 01 00 00 02 02 44 01 00 3B ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½Dï¿½ï¿½;

This is a 1x1 transparent GIF that I use on my web page, But you get
the idea.
The pairs of hex numbers represent a single byte.
On the left side is where you are, in the middle is the acual hex
itself, and on the right is a plain text translation of what the hex
represents.
You change the values by clicking on an individual hex character
with your mouse. It'll then start blinking. Now let's say you want to change
FE to 09, you wouldn't type in 9, you'd press 0 then 9 on teh keyboard. The
cursor will then go to the next hex to edit. You can use the arrow keys to
move the cursor up and down, back and forth. The only keys that'll work are
the 0-9,a,b,c,d,e,f, arrow keys and the tab key when within the hex side.
The a,b,c,d,e, and f are case insensitive, so you can have the caps lock set
to whatever you fancy.
By clicking on the plain text side or pressing the tab key you can
switch to full text mode. Here, whatever key you press on the keyboard,
except for the tab key, will generate ASCII text on the text side and hex
values for that text on the hex side.
So if you type in "Text Goes Here" you'll get:

00000000 54 65 78 74 20 47 6F 65 73 20 48 65 72 65 Text Goes Here

With hex editors when you type in text or change characters, the
rest won't move around like with Notepad or other text editors.
And finally, when you chenge any of the hex or text, what has
changed will change color from black to red. The acual colors may vary from
hex editor to hex editor.

To summorize, to change a 04h to a 6Eh, open the file into your hex editor. Scroll the side bar to where the byte is that you're interested in. Click on it with your mouse, then press "6" followed by "e". The hex char will change color and your cursor will move to the next char. Then select the "File" then "Save" from the menu. The color of the byte will return to what all of the other chars are, but the cursor will remain where it was left. You can now close the hex editor with your altered file now saved.

q.) Where can I get a hex editor from?

a.) They're all over the place. Search for one in Yahoo or Alta Vista. My hex editor of choice for the beginner and for occassional use is HEdit by Yuri Software. You can use the FTP search engine http://ftpsearch.ntnu.no/ and search for "hedit" to locate a copy of HEDit on a FTP server the 'net somewhere.

q.) Now that I know what a hex editor is and roughly how to use it, how do I use it and my ADMS interface kit to modify my FT-50?

a.) Ok, now onto the fun stuff, how to do the software mod itself. The ADMS computer interface let's one dump or download all of the information stored in the FT-50's ram. This is then manipulated and changed by the incuded software, and then uploaded back to the FT-50. When the memories are in the radio itself, there's no way to edit the individual bytes, but after downloading to the PC, it's quite vulnerable and can be easily edited and changed to whatever the user fancies then re-uploaded back to the radio. The only secret is knowing what bytes need be altered, and here thay are:

First, download your memory from the radio and save it as a file. This following information is based on tests done with ADMS software v1.04. If the files your ADMS software saves files that are 9184 bytes in size and have the extentions .TPL or .RDF then you can most likely alter the country byte. If you find that you can't alter this byte because Yaesu has had RT Systems change their ADMS software to not let users do this anymore, then you can get an older copy of the ADMS software from a friend or someone else who has it.
The two bytes that govern the country code are located at 5E3h and CE7h. Your hex editor should show you what byte you're on at the bottom of the screen.

000005E0 02 24 03 01 00 24 00 80 21 08 00 00 14 69 50 00
ï¿½$ï¿½ï¿½ï¿½$ï¿½ï¿½!ï¿½ï¿½ï¿½ï¿½iPï¿½
^ this one (5E3h)

00000CE0 FF FF FF FF FF FF 03 01 03 01 04 FF FF 64 40 FF
ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½d@ï¿½
^ and this one (CE7h)

In the example, some of the other bytes will vary from radio to radio, so don't be suprised if yours looks a little diffrent. But the country byte should be at 01 if your radio was sold in America.
The first byte is more of a security or protection byte that's supposed to keep you from doing what you're about to do. It must be set to

what your radio currently is at, or left alone, depending on the situation.
The second is what you change to get your radio to what country you
want it set to.

So, in order to freeband the radio, first download what's currently
in the radio and save it as a file. Now open it into a hex editor and find
the bytes of interest to you. You wouldn't change the first byte, but you'd
leave it alone. All you'd change is the second byte. You'd set that byte to
06 in order to freeband it:

000005E0 02 24 03 01 00 24 00 80 21 08 00 00 14 69 50 00
ï¿½$ï¿½ï¿½ï¿½$ï¿½ï¿½!ï¿½ï¿½ï¿½ï¿½iPï¿½
^ 5E3h

00000CE0 FF FF FF FF FF FF 03 06 03 01 04 FF FF 64 40 FF
ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½d@ï¿½
^ CE7h

You'd now save the file, then switch to the ADMS program and re-open
your file. Now upload it to the radio. If you get a CERR message on the
display, something went wrong either with the upload / download process, or
when you altered the byte. But 99.99% of the time, things will go without a
hitch.
Now confirm that you're radio has been freebanded by going into a
VFO and extering 50.00mhz. If it accepts this, then try and x-mit on this
freq. The radio should not x-mit, but make a pop sound for an instant then
just sit there not x-mitting. But you'll notice no "ERROR" being displayed
on the screen. If this happens, the radio has now been freebanded.
If all you're doing is freebanding is a friend's radio, you'd stop
here, but there's a problem if you have lots of other FT-50 memory files
stored that you use. If you try and upload them, you'll get an instant CERR
message if you try and do so.
So, you'll need to alter all of your other data files to match the
new country code setting.
Go in with your hex editor and change both the security byte and the
current country byte so that they both match the radio's current settings.
Like this:

000005E0 02 24 03 06 00 24 00 80 21 08 00 00 14 69 50 00
ï¿½$ï¿½ï¿½ï¿½$ï¿½ï¿½!ï¿½ï¿½ï¿½ï¿½iPï¿½
^ 5E3h

00000CE0 FF FF FF FF FF FF 03 06 03 01 04 FF FF 64 40 FF
ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½d@ï¿½
^ CE7h

You'll need to do this with all of your files, but then they can all
be used again.
If you want to reverse the freeband mod and go back to the country
code you had before, simply follow the above instructions, but use 06 as the
country you had before, and 01 (or whatever other country you want to use)
as the country you're going to set it to. Like:

000005E0 02 24 03 06 00 24 00 80 21 08 00 00 14 69 50 00
ï¿½$ï¿½ï¿½ï¿½$ï¿½ï¿½!ï¿½ï¿½ï¿½ï¿½ï¿½iPï¿½
^ 5E3h

00000CE0 FF FF FF FF FF FF 03 01 03 01 04 FF FF 64 40 FF
ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½d@ï¿½
^ CE7h

q.) But from the old hardware mod I remember things like "BAND_B2a".
What you just said only changes "BAND_x2a", so how do I change the sub part
after the letter?

a.) That "BAND_B2a" stuff is part of the radio's internal menu system to
change the country code settings. The letter is the country, while the
number and letter after it specify details about the country. Like 1 is
without extended recieve where you can only recieve on the freqs you can
x-mit on and 3 is standard operation but with the ability to recieve almost
anywhere, like it normally is. The 2a and 2b settings involve the MARS/CAP
mod, and I have yet to explore those.

q.) So, how do I change the sub country setting with the software mod at
the same time?

a.) I haven't had much success doing this, but I soon hope to have this
cracked. From what I've been able to figure out, two bytes govern the sub
country setting. These are:

00000CE0 FF FF FF FF FF FF 03 01 03 01 04 FF FF 64 40 FF
ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½ï¿½d@ï¿½
^ ^
| CE9h
CE8h

CE8h is the main one, it's at 00h for "1", 01h for "2a", 02h for
"2b", and 03h for "3".
CE9h controls the extended recieve. It's set to 00h for no extended
recieve and 01h for extended recieve.
If I change just CE8h then the ADMS software corrects the file and
set's it back to 03h if CE9h is 01h, and back to 00h if CE9h is 00h. It also
does this if I set it to 01h and 02h. :(Some byte needs to be set to
specify a MARS/CAP mod.
The good thing about this is that there's no security byte, you can
change these bytes to your heart's content in whatever file you want.
I'll soon have this cracked, but keep in mind that this is just a
beta FAQ.

q.) Well, have you at least figured out what all of the country codes
do?

a.) Most of them. Figuring out what the frequency bands took long enough,
I admidt to getting lazy and not figuring out what the default repeater
splits are, and what the other country codes do to other default settings.
Hey, it took me long enough to figure out what I did figure out.
Here's the byte settings as they relate to the old hardware mod:

```
| 00 01 02 03 | <- sub-country byte (CE8h)
---+---------------------+
00 | F1 F2a F2b F3 |
01 | A1 A2a A2b A3 |
02 | B1 B2a B2b B3 |
03 | C1 C2a C2b C3 |
04 | D1 D2a D2b D3 |
05 | H1 H2a H2b H3 |
06 | FrEE FrEE FrEE FrEE |
---+---------------------+
^- main country byte (5E3h & CE7h)
```

Here's what country each country byte goes to:

```
---+------------+
00 | ? |
01 | America |
02 | ? |
03 | ? |
04 | ? |
05 | Canada? |
06 | Freeband |
---+------------+
```

Hopefully someone can fill me in with what country codes go what
countries that I've lsited as "?".

q.) What bands does each country code let you operate on?

a.) Glad you asked, I spend three hours making this table:

```
country sub-byte (CE8h)
| 00 | 01 | 02 | 03 |
---+----------------+----------------+----------------+----------------+
| tx | tx | tx | tx |

So it took you two hours as a cub scout to learn Morse code, but you
feel that it's more than the average ham in 1998 can handle, and your
PhD friends shouldn't be forced to endure it.

Makes sense to me Cecil......

Hi,
This is Zhouhao from China.
I have a Kenwood Th79A-M4, Some books,such as QRZ magazine said the
transceiver can work from 400Mhz to 512Mhz after Modification.But the
F-Range
of mine is only from 410Mhz to 470Mhz after mod. Does anyone know the
reason?

Of course the fact that this scenario hasn't even happened in
some decade or more is also ignored by the procode test
folks. Nope, they want EVERYONE on HF to learn code just
in case ONE person MIGHT resort to such a scenario in an
emergency. Indeed, they already ignor the reality that almost
ALL emergency contacts are not even on HF anyway.

Cheers,

It apparently got sniped out in the re-write. The whole NPRM makes more
sense if 1(A) had been included in 97.501(c) ["Qualifying for an amateur
operator license", General].

I live in the middle of the northeast corridor, in the most densly
populated state (NJ) and inspite of the concentration of hams
there is not an overly crowded situation at hand. Sure there are
SOME peak time periods and peak days, but the bands...all
of them, are still vastly underused. Just because someone
prefers the traditional evening/weekend operating times and finds
congestion at those times, is not a valid indicator of band
congestion.

go check the history, dude. when all the good opportunties existed for people to break into digital communications and score another one for amateur radio, we had rules that restricted what we could do to basically 60 WPM 5-level code.

everyone else moved to ASCII and hams were still stuck running Baudot...

This is a kind of tail wagging the dog question. I live in a very small apartment, so when I get around to buying my first radio, it is going to hve to have a "small" antenna and a power output that won't fry my brain. So, what frequencies (tech level) should I consider?
Dennis

The planet also probabaly had half the population then, too. HF is wide open these days, as the commercials are moving into satelites and such. I wouldn't be surprised if we continue to get more HF spectrum space as time goes on. The serious problems are above 30Mhz. and that's the part of the spectrum which will be increasingly under attack and more difficult to justify if we don't populate it.

> Our pre-WARC HF bands
> were acquired with less than one-tenth of the number we have today.

Agreed.

> ZUI the early issues of QST in which some hams, like yourself werealso saying
> amateur radio will be dead in a few years..

I'm not really a doomsday day type, but I am concerned about the average age of hams creeping into the geriatric range. The kids are doing other things and I'm really concerned about that. Thirty years ago my own local club was about equally divided in age at about 35 or so, a few original wise old 1x2 call types balanced by an equal nymber young butt-kickers. I didn't go to a meeting for twenty years until a couple months ago and was appalled at the lack of new blood, the place looked like a geriatric ward. This is NOT good.

None of which has anything to do with code tests or any lack thereof.

Hey guys-

There is a few of us working a SLO-Chat on 15 meters at 21.158 on Sundays at 17:00 and 23:00 UTC. We try to work at abt 8 WPM. Also check the freq at other times because we try to hang out there at other times.

I have for sale three handheld tranceivers:

1. ADI 400HP 440 rig with five watts out on high, includes box, manual and charger. looks and works like new! $180 shipped

2. Standard C288A 220 MHz HT with extended receive, covers 100 MHz to 225 MHz continuous. Includes box, manual, spare AA pack and charger. Super shape! $220 shipped

3. Radio Shack HTX 202 2 meter HT, covers just the two meter band. Works very well. Includes box, manual and charger. Has a Larson replacment duck. Nice shape, works perfect! $115 shipped.

Can be seen here....

Ken, what are your code qualifications for asserting your the only one who
knows how to learn to copy code ? Mine are having been a Navy Radioman
back in the 50s and 60s when we still used code. Although a bit rusty now last time
I was on a code binge I could get down on paper 20 wpm dit for dit all day long.
I could get 25 wpm dit for dit for about 20 minutes until my hand got tired from
writing.
I could not write that fast but I could copy 30 wpm pretty soild in my head.
I say on air code copying is better than computer copying because if you use
a computer and you get used to one tone, one rthym then if it is different at the
test it will take you a bit to get used to it and by then you have missed some of the
test. Also if you copy code in a noise free environment when someone coughs or kicks
the table it will distract you. On air code copying with built in noise and even a TV
in the background will help you to not be distracted.

Tom@astro.net wrote:

> You know, this amazes me. I finally upgrade to tech plus, I did my 5WPM
>test and the higher class folks STILL complain it's not good enough.

Nobody's complaining, Tom. Just stating facts. Five words per minute in NOT good enuff to communicate using Morse code. And where do you get all this 'higher class' stuff, may I ask ? Who said anything about classes here, we are discussing Morse code.

>I've been trying to get over 10WPM for the past 2 years.

You should try more often than 5 minutes a month. Taking about how hard it is does not constitute 'trying'.

>Getting to 13 does NOT make anyone better for pet sakes.

Certainly it does. 13 is MUCH better than 5, but it still puts most good CW ops to sleep.

>I'm not against using code, just the testing of it.

I'm not against using drugs either. I'm just against drug testing.....

>I'm still plugging away at the code but I really think it's BS.....

There you go, Tom, you figured out your problem. You THINK something is BS, but you are trying to learn it. Right. Anybody who thinks anything is BS will make an honest effort to learn it. Sure. Let me check my drivers license and see if my birthdate says 'YESTERDAY'.... You aren't studying, you aren't trying to learn, you are 'plugging'.....

Fact is, you think code is BS, so you don't want to take any more code tests. Admit it, you'll feel better..... Go join No-Code International (tm), they'll lead you to green pastures and they'll take care of all the plugging, you won't have to plug at all anymore.

I know what you mean, Chris. I love to fish. Every time I go by the mariana on the other side of the island, I see some SOB sitting in a deck chair on his 45' Bertram. Bunch of fishing rods stuck in the holders, each one has a $2000 Penn International reel on it. It really burns me up that these guys with all the bucks get to go fishing every day and I have to stay on the beach......

I wonder if the welfare department would by me a boat, just because I really, really, want one.....

Anyway, there are LOADS of CW ops above 20 mhz. Listen to 15 meters the next time the band is open to Europe.....

First I said:

> Five wpm is no code. A cub scout can learn Morse code at 5 wpm in a
> week.

Then "Christopher Cox" <cobox@netexp.net> wrote:

>Yep, Code requires about that mentality, regiment, self control, for no
>reason at all....just because...Work hard for minimum wage, minimum
>output....Shesh..Its no wonder people look at these guys like a bunch of
>reelects...Hard work towards nothing....Well, here ya go, this is what you
>deserve, nothing.

Cecil, W6RCA, a proponent of the no code HF license, said my first statement was incorrect. He said he learned 5 WPM as a cub scout in two hours....

Nothing in your book, Chris, not necessarily in mine. I can operate on any frequency on any ham band, and I have had thousands of enjoyable CW contacts on HF. So the little bit of effort that I spent passing a few tests seems well worth it, to me anyway.

Turn what you just said around, and think about it for a few minutes, Chris. Maybe some of the people who are opposed to no code HF licenses have the same view you do, only backwards.

Anything in life worth having requires some effort to get it. The people who are willing to expend the effort have it, and the people who are not willing to expend the effort don't.

>Well, I will give you one thing Jim, at least you are not hiding behind
>some alias....But why is it you pro-code guys all come from juno, webtv,
>dejanews. It could be you are moving, but the others seem to be hiding and
>using aliases.

>Christopher Cox
>KC8FRJ

Thanks, but why is it that you think I'm one of those 'pro-code' guys ? Did I say that ?

I don't know about WebTV, Chris, but Juno is free, so that's why a lot of hams come from there. I come from DejaNews on your screen, but I really don't come from DejaNews. I've been here more than 15 minutes and I can spell SPAM. DejaNews eats my share of SPAM for me.....

I'm not moving, I've been on the same island for 15 years, and if you send an email to the DejaNews address, you'll get a reply. Most people who are hiding behind an alias are doing so because they are afraid to have their opinions connected to them. That's not me, for sure. Plug KH2D into a search engine, and you'll see I'm doing a really bad job of hiding.....

Recently on 3830 I had the nauseating experience of listening to some immoral YCCC contesters defend The Liar. I would like to remind them law still rules the US, even if they do pad their scorees in their obsessive quest to defeat FRC.

Before he enter on the execution of his office, he shall take the following oath or affirmation:--"I do solemnly swear (or affirm) that I will faithfully execute the office of President of the United
States, and will to the best of my ability, preserve, protect and defend the Constitution of the United States."

Section 4. The President, Vice President and all civil officers of the United States, shall be removed from office on impeachment for, and conviction of, treason, bribery, or other high crimes and misdemeanors.

>
>MFJ sells a handkey for $8. Or make your own for feee.
>
>You can easily make your own set of paddles, too (or just use two handkeys
>back-to-back).

My first key used a piece of hacksaw blade for the arm, and served as its own tension spring. An old relay provided the contacts, which were simply soldered into drilled out screw heads. I used a board for the base and a drawer knob for the knob. No, I dont still have that one, but I often use a similar one I built on a brass base, and it works FB at 20 WPM. A longer piece of blade provides less tension, and shorter pieces give more tension. A bridge assembly and a knurled screw over the arm near the knob set the gap.

A key can be a work of art and command a high price, or it can be pretty basic and cost peanuts to build or even buy ready-rolled. Jeff is quite correct that paddles are simply two seperate keys back to back, or even side by side. If I was a keyer guy, I would have paddles in my collection of homemade keys along with the bugs and pumps. My only storebought key is a used vibroplex bug I bought from an R/O I sailed with a few years ago.

Most accesories can be homebrewed, scrounged, bought cheaply, or done without.My jap wonderbox cost well under a grand and beats the pants of any boat anchor that, price adjusted for the value of the dollar, cost five times as much. Ten-Tech has a nice line of kits for under a hundred, Ramsey has some for $30, and if you have a usable receiver, you can build up something with a couple of 2N2222As for about $10 to transmit with. And let's not even touch the subject of used wonderboxes... except to say that $300 has an even chance of getting you on the air in style.

Jim, the FCC (who might be considered the "real" authority on what is code and what is not code), considers 5 WPM to -be- code. So much so, that 5 WPM and a simple written exam will earn that cub scout HF priveleges from 3675-3725, 7100-7150, 21100-21200, and 28100-283500. But you, who have no regulatory authority over the amateur bands, say that 5 WPM is no code. I'm going to go with the FCC on this one.

There are no PL-tones on German repeaters. Offset on 2m is always
-600kHz, on UHF (70cm) it is -7.6 MHz. In order to access a repaeter
that has dropped for more than a few seconds, you must send a tone burst
of 1750Hz to open it.

Sounds like a description of a Hustler 4BTV/5BTV with the top coil. If it has a "top hat" under that screw on coil, then it is the Hustler.

I do not have any spec's/measurment's but this may help.

Set it to the worn in marks that you can see, start adjusting from the highest band (10meters). Set for center of band segment you want to use. As with any of those older design vertical's, they must have a decent ground. The Hustler mounted in ground plane configuration was said to need a minimum of 1 1/4 wave radial per band. On the ground, a good stake and a series of ground plain wire's were needed to get reasonable efficiency.

I got best result's by mounting mine up about 8 feet, and running a bunch of wires above ground. Hope this help's somewhat.

They are illegal in some states but not in Washington D.C. What is illegal is lying under oath and encouraging others to do the same. What is illegal is withholding evidence and encouraging others to do the same. I predict Paula Jones will be granted a new trial.

No, it's not more than the average ham in 1998 can handle and yes,
my PhD friends shouldn't be forced to endure it. I consider CW
a very useful and fun mode and urge every ham to learn it and try
it. Yet I consider Morse code to be an immoral governmental requirement.

I do not believe in forcing my favorite mode on anyone else. Why
should everyone be forced to pass a motorcycle test before they
can drive a car? If you don't understand that, you don't understand
Libertarians. The least amount of governmental requirements that
work is the best amount of governmental requirements and a secret
handshake/hazing ritual/tradition/Good Old Boy network has no place
in allowing access to a limited resource owned by all citizens of
this country.

By all means, test what is necessary. Morse code testing above
5 wpm is unnecessary as evidenced by the existence of extremely
qualified waivered hams.

It wasn't supposed to be exciting. I was doing N5AQM a favor while he was on sabbatical. I was his free wireless ISP while he was away from his telephone. PACTOR stayed on the job 24 hours a day for 4 months through all kinds of conditions. CW failed to function after only a few straight hours. :-)

ARRL VEC CONTEST

Early Contest Tabulations as of 08/19/98

Zeus 98 has some of the results of the ARRL VEC HAM OF THE YEAR AWARD. These results will be given at various times, up to the final date of 10/01/98. Here is the count as of today. Walter WD4IUD, has 79 votes, Manny W4SS is close behind him with 73 votes. (MANNY "THE GREEK"IS ALWAYS BEHIND SOMEONE). Graf KG4U has 1 vote. (HE MUST HAVE VOTED FOR HIMSELF).

There is still lots of time to vote. IF YOU HAVE ALREADY VOTED THEN YOU MAY ASK WALTER WD4IUD FOR SOME OF THOSE NICE COUNTY GIFTS. ZEUS 98

Have 2 in great condition. $175 each includes shipping and prg if needed.

Consider trade both radios towards 1 mot UHF/VHF/800 HT/Mobile of = value.

TIA - Joen001@aol.com

If it's so easy, how is it a feat of endurance? If they spent the same
amount of time on learning the code that they do complaining about it,
they'd all be extras by now.

>
>No, it's not more than the average ham in 1998 can handle and yes,

>can drive a car?

Maybe they should. ;-) Then so many car drivers might not be causing
problems for the motorcyclists. Ask any biker what the biggest danger to him
is and he'll tell you it's the motorist who doesn't see him, cuts him off,
doesn't understand the different stopping distances needed by a motorcycle,
etc. But that's a different subject....

If you don't understand that, you don't understand
>Libertarians.

Guess not.

The least amount of governmental requirements that
>work is the best amount of governmental requirements and a secret
>handshake/hazing ritual/tradition/Good Old Boy network has no place
>in allowing access to a limited resource owned by all citizens of
>this country.
>
I don't think a code test is a secret handshake or hazing ritual. If having
a basic skill that can be used to communicate with is a tradition, then what
is wrong with that? If by Good Old Boy network you mean a group with
fellowship and a common bond of experience and interests, then so be it.

I do like your pointing out that the spectrum we enjoy is a public trust
that we should have acess to as citizens. Enough of that public service and
technical experimentation stuff. We shouldn't need to justify Amateur

radio -- as citizens, it's our spectrum.

>By all means, test what is necessary. Morse code testing above
>5 wpm is unnecessary as evidenced by the existence of extremely
>qualified waivered hams.
>--

The higher tests are unnecessary. Noone is forcing anyone to become a General or Extra.

The sad thing is the lousy frequency assignments given to the novices. The worst parts of the bands that noone else wants. Noone to talk to there. If they were able to communicate lowwer in the bands where they might enjoy it more, we might be reading about how many novice licenses were issued, instead of how few.

Gareth:
I solved that same problem several years ago by installing shrink fit tubing over the elements, What you are experiencing is probably precipitation static. Actually the rain or snow is statically charged and discharges when it hits your antenna. That effect can sound like frying bacon in your receiver.
Good luck and 73's...Dick K7RNZ

Well, Cecil, the last time I was there, the White House was in
Washington, D.C., so unless they moved it, that pretty much
takes care of that.

Sounds like you been watching too much CNN, Cecil. Don't start
thinking what they tell you is fact, they are in the entertainment
business. I sincerely hope the rest of the American public has
better things to worry about than you do....

President Clinton should have flipped America the bird about
three months after he was elected and resigned, you guys
should wise up and realize how lucky you are that he stuck
around.

Throw a few A & F words in there Cecil, and you'd sound exactly like
our dear departed friend, Squiggy.

>By all means, test what is necessary. Morse code testing above
>5 wpm is unnecessary as evidenced by the existence of extremely
>qualified waivered hams.

Why is 5 WPM necessary ? Why not change it to 3 WPM or 2 WPM,
why's it gotta be 5 WPM ? Is five OK because you learned 5 WPM
as a cub scout in two hours and you figure that 5 WPM shouldn't be
a barrier to the average moron who wants a ham ticket ? I doubt
most people are worried a whole bunch about those 'extremely
qualified waivered hams', I think they're probably more concerned
about the extremely unqualified not waivered ones....

It's a nice troll yabyum but I'll bite...
Let's not forget there are a lot of very good operators from all walks of life, would you not get into photography because there are some who stalk celebritys for photos? Anne Lebovitz (sp) takes lots of terrific pictures of celebs but I'm sure she's never stalked any for a photo. Would you not join a computer programming group because there are some who hack systems and write viruses? There are bad examples in anything you do, the question is, are you going to allow a few bad apples to spoil what could otherwise be a terrific and enjoyable hobby? The choice is YOURS don't let the Liberty net make it for you.

You last paragraph, as others who have stated the same, has always puzzled me. If you claim that the airwaves are public then why not state that 'all' frequencies should be open for public use without any licencing. The concept of licencing, in my opinion, is to instil a degree of sanity, my words, into the radio system. We already have a band of frequencies which are open to the public, 27 mhz, and I honestly believe that most radio spectrum rule makers wish that band had not be so openned.

This a problem that is only worsened by all the blather about how "Old and useless the code is today" crap. Any observant person can readily see what has happened in the world in the past decades.

But promoting the idea that "It is a useless hazing ritual designed only to filter out those who can't or don't want to" learn code has got to be a negative influence on anyone who DOES want to learn it and get on with their hobby. You must first learn to ignore all this. I'm glad we had no such nonsense when I started.

Concentration is the key to learning code. Ignore all the verbiage and just concentrate on learning and practicing. If you have HF receive capability, there are several practice sessions each week, most of which are described in QST and at the ARRL website.. And of course, many code courses and practice tapes are available. But it requires you to ignore all the anti-code rhetorice on here and other places and CONCENTRATE on the subject of learning code.

Best wishes for a successfull conclusion to your efforts.

Dick W0EX.

1607. Coax cable specs?

Newsgroup: rec.radio.amateur.misc

I recently found some coax cable at work that was being
pulled out and discarded. It is labeled:
General Instruments 3250 Ethernet E82833 AWM Style 1478 .
I has 'N' connectors on it. I was hoping that it was
50ohm type and useable for HF or VHF.
It is extremely well shielded and has a solid center lead.

Anbody know about the specs for this cable??

Thanks,
Donn
KI8EE....

>3675-3725, 7100-7150, 21100-21200, and 28100-283500. But you, who have no
>regulatory authority over the amateur bands, say that 5 WPM is no code. I'm
>going to go with the FCC on this one.

10wpm used to get you full access to any and all amateur HF frequencies.
I wouldn't mind seeing that brought back today (as long as the VEs
administer the old one-minute-of-solid-copy test).

Hey Ed, why'd you post your code comments to r.r.a.space???

Ed <kb5ryp@concentric.net> wrote:
>I for one am glad to see that they are thinking about changing the license
>classes. Morse is a thing of the past.

Second-most used mode on the amateur HF bands, Ed. (You still use a
telephone, Ed? It's also "a thing of the past," you know.)

>I myself learned enough morse just to
>get on the phone bands and to use pactor.

No matter what freq'y you choose for phone or pactor, you're also on a
CW freq'y; for that reason alone you should know the code.

>I do not and will not use morse any more.

Doesn't matter what you want. As long as you operate on an HF freq'y in
which CW is permitted, you should be familiar with the code.

>The way that license classes are set up now, is like the fcc giving a crutch
>to morse just to keep it going, because it is so old and feeble.

Consider there being skill tests for all the popular modes, with tests
for phone and digital being waived. That should make you feel better!

Fol-ups to .policy,
Jeff KH2PZ

You know, this amazes me. I finally upgrade to tech plus, I did my 5WPM test and the higher class folks STILL complain it's not good enough. I've been trying to get over 10WPM for the past 2 years. Getting to 13 does NOT make anyone better for pet sakes. It just means they can copy faster. Big deal. I'm not against using code, just the testing of it. At the very least they should drop the 13WPM general test to 5 or 10wpm. I would rather be made to learn more technical material to upgrade than have to do code, THAT would make me a better ham. You know how many people go NUTS to pass their Extra and NEVER use a key again? Just so they can say "I'm an extra"? Like that's such a big deal.

I'm still plugging away at the code but I really think it's BS that they still test it. Drop the code testing speeds or eliminate it and add more technical questions, that seems fair to me.

Isecond the motion DX4WIN. I used DXBase for several years but Like
DX4WIN better been using it 10 Mo now. I have over 25,000 QSO's in the
database going back 25+ years. never had a problem by all means down
load the demo

Yeah, right, Jim. If you don't approve of modifying radios, you
can just say so - providing this obviously bogus mod is pretty
low.

For what it is worth, the main board isn't where the IC-2000 mod
was, and probably isn't where the IC-2100 mod is.

>me.

Well, let's see. 13 WPM will buy you a general ticket, and the opportunity to take the advanced class test. 20 WPM will buy you an extra class ticket if you can also pass the written test.

Waiting might buy you HF someday. But then again, it might not. Wait and see....

Several times you have mentioned you'd like to be on 15 and 20 meters. But you apparently don't want to be there bad enuff to do anything but wait...

>What is your logical reason for CW usage?

It's fun. There are thousands of hams all over the world using it, and you can talk to them. On a day when propagation is lousy, you can usually work a few people with CW that you couldn't work with SSB. In a situation where you are using a poor antenna, and low power, you can usually contact more people with CW than you can on SSB.

>Hey, I had my novice ticket 25 years ago, as you put it anyone can memorize
>- . but NOT really use it.

Sounds like you decided to wait a long time ago.....

Yep, Code requires about that mentality, regiment, self control, for no reason at all....just because...Work hard for minimum wage, minimum output....Shesh..Its no wonder people look at these guys like a bunch of reelects...Hard work towards nothing....Well, here ya go, this is what you deserve, nothing.

Well, I will give you one thing Jim, at least you are not hiding behind some alias....But why is it you pro-code guys all come from juno, webtv, dejanews. It could be you are moving, but the others seem to be hiding and using aliases.

Ethernet (the thick stuff) is roughly equivalent to RG8U. Thinnet is like RG58.
Oh yeah, being foam, it can't take high power, though. On VHF watch out for
any "vampire" taps (holes), also if you use it outside.

I was talking about military birds. Ham radio is different.
We have a need for code.

>2.) it only takes a few missiles to take many of them down. Then where
>are we?

Most military birds are farther out. SDI is not yet been activated.
And the military has more birds than can be shot down easily.

>Like Burt said, if you have no resources other than limited battery
>power, the only efficient mode is cw. Running an inverter for a computer
>for say packet, or fm and even SSB is not the mode of choice in that
>scenario.

But CW does not function on the modern battlefield. We have
too much data (including graphics and video, which CW will not
help us with), coming too fast, over too much land mass (like Europe,
the Middle East and Africa, I know because I was part of it in 1997).

Modern data transmissions also can be encrypted on the fly. No
setting with code books. CW just takes too long and transmits too
little data to be useful for the Army or Navy.

>Now on the other hand, if there is plenty of resources, packet will be
>an excellent choice for moving messages. Or even atv for damage
>asessment. Each disaster has its own proper applications.
>

The problem is that too many ham are living with the romance
of radio. You know, when a lone operator was valuable. Skilled
operators are not needed. Machines do that now. But we do need
skilled technicians to maintain it all.

I also own a T2A, and solved the poor microphone audio problem myself.
I used a very small PCB drill bit to drill out one of the dimples in the front
of the case directly over the microphone. The audio quality was improved
significantly.

Great if all you want to do is communicate while everything is perfect. It like the internet, there isn't really any "fun" using the internet or these news groups. Your computer does all the work and all your left to do is type. The fun is making a contact with you own skills and not rely on mechanical/electrical equipment to do the job for you. When I make a RTTY/PACTOR/AMTOR/GTOR contact I don't feel that I have accomplished as much as when I make a contact on CW. With CW I have to use my brain to decode the dits and dahs and not rely on something else to do it for me and to use a CW keyer "you" have to form the dits and dahs. When there is no challenge in a contact then all the fun is gone.

What does grabbing a mic and working DX have to do with TECH types. If you
want to get into the hobby to do technical work then a tech + will do you just
fine. If you want to work DX try six meters. The band was opened last night
and there was many stations there working DX. Code is no barrier unless you
want it to be.

Funny you say that. The past two nights I have been on 15 "CW" and only had
to call CQ once to get a response. Same on six meters last night. Worked a
station in Canada in the CW portion of six meters. Go and yea shall find.

** Replace "gateheap" with "g8eap" to reply **

20th August, 1998.

Owing to insufficient Support from the Trade, the Members of Bury Radio Society have decided with much regret to cancel their forthcoming Rally, which had been scheduled to take place at the Castle Armoury, Bury, on Sunday, the 6th September, 1998.

Bury Radio Society apologise for any inconvenience and disappointment that this may cause but they can assure Traders and Potential Visitors that every possible alternative was investigated thoroughly prior to this decision being made.

The Society wishes to thank those Traders and Organisations who had given their Support to the Rally and express the hope that there will be a better Response from Others for Future Events.

73 de Keith G8EAP and G0WQD
for Bury Radio Society

1661. Follow up on Rain Noise

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-20 00:00:00 UTC
From: Gareth Crispell <gareth@capecod.net>
Message-ID: <35DC45D0.E15CF0B1@capecod.net>
Source record: 164282
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.antenna

Thanks to the many hams who replied to the original rain noise post.
Here is a consensus of the collected wisdom.

1. This is a very common problem with aluminum yagi antennas.

2. As I suspected, it has to do with electron excitation. Most
seemed to feel that as electrically charged rain drops hit the
grounded antenna-tower, they discharge and cause the hissing-frying
bacon sound. (If some of the EE's or other experts in this field
would like to expand/correct this, I am sure a lot of us would be
interested!)

3. Some hams solved the problem by using shrink wrap on the
elements. No comments as to addition weight or wind resistance.

4. Quads are far less noisy.

and phonograph records, and those newfangled casette tapes. And sending to each other with code practice oscillators.

Actually, I went the computer route, with an old IBM 286 machine and an early version of SUPERMORSE, and I went from zip to 20 in about a month, at least copying computer-sent morse! No way I could have done that inside of 6 months with tapes, or on-the-air code. I still flunked the 20 and 13 first try, though, so like Adam, I started out as a tech plus, upgrading to Extra the next time I was home. Anyway, God bless that old AT machine, wherever it is now.

Congradulations, Adam, and welcome to the bands! Don't give up... take the code test again at every opportunity. BTW, my personal favorite tutor is Supermorse, avail at my website and lots of others as well, and I think on the QRZ cd-rom.

>In a word, I am getting extremely frustrated with this, and frustration
>!= fun.

Yeah, it certainly is different, hearing CW over the air rather than nice sanitized and pasteurized beeps out of the computer! Don't waste a lot of time listening to over-crowded band segments, and use a good narrow IF filter and even audio filtering if possible to reduce the noise you have to listen to. It is hard sometimes to find somebody to listen to, or to actually work, who sends nice, clean code at a speed a newcomer is comfortable with. When you find such a station in the Novice bands, be patient and work him when you can. A good strategy, if there is a bit f a pile-up waiting to work the other station is after he igns off from a contact, and everybody rushes in to call him, kinda surf right in as the bedlam dies down, and just send your own call, slowly and distinctly, once. He knows you are calling him, and by waiting till after everybody else stops, you have a better chance of being heard. Try, though, to avoid the pileups, as they usually will result in you only trading QSL info, and give you very little practice sending and copying.

When you send CQ, do so at a speed you are comfortable copying. If somebody calls you back and you don't get their callsign right, it is perfectly alrigt to send: "QRZ? DE [mycall]" , or answer by calling with however much of it you

think you got, followed by a question mark. Ask for all the repeats you need, and don't be reluctant to ask the other guy to QRS (send slower) especially when the band is noisy.

The Novice portion of 15 meters should give you plenty of action, with fairly low levels of noise. One popular setup for Novs and Tech Pluses is an inverted vee cut just a bit short for 7100, so that it just does present a usable SWR down the coax to your rig, and use it as well on 15 meters. You may need a tuner to handle the mismatch, or you might not. Experimenting with different lengths of coax might actually result in a low SWR at the rig. Anyway, this gives you two novice bands, one during the afternoon and early evening, and one at night and early morning, where you will hear plenty of traffic, some DX and some fellow Techs, as well as the occasional old timer who likes to work the techs and novices; with one simple antenna, fed with coax. Be advised, though, that 7100 and up, in the evening, is pretty noisy from all the european shortwave broadcasters, and in the summer there will often be a lot of QRN from distant thunderstorms.

> The question becomes then, what to do? I will continue to listen
>to the code practice and try to make more QSOs, but there has got to be
>some kind of guide to the actual practices of CW and how the contacts
>run. And of course, other questions arise: How do I quickly tell
>someone to slow down?

PSE QRS (please slow down) NEW TECH OP HR

> How do I break into a transmission to do so?

Most newer rigs are either full or semi-QSK, so the other guy can hear you if you break in during his transmission, between words. You can send BK for "break", or you can send a fairly long dash first, before the BK. That is not considered rude... after all, if you don't break in and ask him to slow down or repeat, he will just have to send it again anyway.

> How
>do you tell someone to piss off who has just broken into your QSO with a
>bunch of CQs?

The key word here is POLITELY. You could send QRL a couple of times, breaking in on the station you are working if necessary, then asking for a fill of whatever you missed. QRL of course means "I am busy". Usually, the other station thinks the frequency is clear and so sends CQ not realizing he is interfering with you. He might be running a lot more power, or he might be a long way from you or he other station, and hearing only silence from his location while the more distant station is transmitting, think the freq is clear. If the interfering station calls you directly, just BK, then answer SRI QRL PSE AS (sorry, I am busy, please stand by.)

> How many times will most people repeat, before they think
>"Forget this moron, how did he get licensed in the first place?"

Hey, everybody had to crawl before they started to walk. You will get your chance to pay your dues when you have been hamming for a couple of years, and

you work a new generation of new hams who will be facing the same challenges
that you are dealing with now. Every op who has to give you repeats had to ask
for them himself when he started hamming. Don't worry about it. Just remember
to be patient with the new guys when you are an old timer yourself.

>Obviously, I have a million of 'em...
> I guess I can answer one question myself: the way to copy code
>better is to use it a lot, right?

YUP.

I listen to groups and generated QSOs
>on the computer almost every day, then try to make some live contacts.
>Now granted, I have only been licensed and transmitting for three days,
>but when does this become fun?

Pretty soon. As soon as you get used to working other live stations on the air,
and get over your initial jitters. Usually a couple of weeks. Actually, I
thought my first QSO was fun, though I was shaking like a leaf, worried about
screwing up and making an ass of myself on the air. When it was over, I let out
a big "WHEW!" and shut down till the next day. It was a major thing to me, and
I felt a certain accomplishment in completing that halting, stumbling, first
contact.

I have had more fun studying for the
>tests than trying to make contact with folks via CW. (I know, a little
>strange, but I like studying...)
>
> Anyway, I am not one of the no-code folks screaming about learning

I didn't know any local hams when I started, either, though of course the R/Os I sailed with helped me out a lot. I didn't have internet access either, but I armed myself with all the books I could get my hands on, and got on the air as much as I could. I recommend getting ahold of a recent edition of the ARRL HANDBOOK, a bible of sorts for the radio amateur. You will never outgrow it... lots of useful reference material in it for hams of all levels of experience and expertise. There is a new one published every year, but there are few enough changes from one edition to the next that you can just get yourself a new one every 3 or 4 years and still be pretty current. Even an older one will give you a lot of good pointers on operating, and valuable references such as a list of common abbreviations, Q-signals, etc. You will also find quite a bit of material on building your own gear, ranging from simple one IC or one transistor transmitters to full featured, full powered transcievers. Hardly anything beats the rush of getting on the air with homebrew equipment.

As for CW being outmoded, etc, whether true or not, for your purposes that is irrelevant, since you have already learned it and only need practice to improve your new skills. You WILL probably get a lot of bozos answering your proper and polite request for assistance, so face it... you are gonna have to ignore them on a case by case basis. Meanwhile, if you need help, continue to post here if you can't find a solution in any of your printed references, and you can email me anytime I am not at sea. Good luck.

Ah, Grasshopper, it is written: "He who say he go away but still lurk and watch for posts about his unworthy self is too pre-occupied with internet to enjoy vacation anyway".

All joking aside, if you really want to leave the group for a while, why continue to lurk and watch for your name to appear? It really shouldn't make any difference to you, after all. When anybody else says they are leaving, they leave... except for a few who just switch aliases HI HI. When you stop posting, stop reading too, or else just ignore posts that get your bowels into an uproar.

How can you lie about something that's NONE of the Government's DAMN BUSINESS
???

>What is illegal is withholding evidence and encouraging others to
>do the same.

What BUSINESS is it of the GOVERNMENT (And Ken (NAZI) Starr) if two CONSENTING
adults engage in CONSENSUAL SEX ???

I fear a NAZI (out of control) prosecutor that issues a subpoena to a
BOOKSTORE (Vat Books Ver you Reading Monica ?? Did Zay Mention SEX ??????) far
more than a president that gets a BJ in office. And WHAT does a LEGAL BJ have
to do with WHITEWATER which is WHAT Ken (NAZI) Starr was supposed to be
investigating???

I predict Paula Jones will be granted a new trial.

I predict some Republican (Benefactor) will pay for new Breast Implants to go
along with her new nose. Funny she didn't say much until he became president.

If an out of control prosectuor can drag down the highest office in the land
for LEGAL CONSENSUAL SEX What can he do the likes of all of us
????????????????????? Think about it !!!!!!!!!!!!!!!!!!

Yeah I feel much better having government prosecutors issuing subpoena's to
_BOOKSTORES_ and investigating LEGAL sexual activities. Remember that when
there's a knock on your door and a glassy eyed NAZI (Ken Starr) wants some
information about YOUR sex life. Perhaps instead he'll investigate your
Mother's sex life and we can read about that in all of the paper's ??

When you get caught getting blown by your secretary, in the office
provided by your employer, on company time for which you are both being
paid, try pleading that it is LEGAL.

If you had consensual sex, with a secretary half your age, on company time,
in the building owned by your employer, and lied about it under oath, you
should expect to get fired, as should Slick Willy.

A blowing wind in the middle of winter will put enough of a charge on an
ungrounded beverage antenna to knock you on your butt - I know this from first
hand knowledge. :)

>3. Some hams solved the problem by using shrink wrap on the
>elements. No comments as to addition weight or wind resistance.
How about an AC ground?

>4. Quads are far less noisy.
Why, the metal wire is still conductive.

A blowing wind across an ungrounded "V" beam, 350 foot on a leg, will build up enough charge to arc across the plates of the tuning capacitor in a Johnson KW matchbox - I know this from personal experience as well. In Florida it happened quite regularly on days when there was not a cloud in the sky.

1693. Sneakpeek explanation and summary for rec.radio.amateur.misc

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-20 00:00:00 UTC
From: sneakpeek@talkway.com
Message-ID: <oISC1.949$Mw1.923072@c01read01.service.talkway.com>
Source record: 164314

We developed SneakPeek postings as a result of many Usenet users' desire for a summarizing tool that would help them skim through the most active threads. Thus, SneakPeek postings are intended to help users with limited time keep abreast of group discussions, stay in touch with more groups, and check out new groups quickly.

Usenet is an environment where every voice should count equally. However, while some users have found SneakPeek postings useful, others have tried to shout it down, potentially resulting in the tyranny of a vocal few. Therefore, we encourage all to post their constructive opinions so that we may democratically decide if there is room for SneakPeek postings in Usenet.

Talkway, Inc.

It seems to me that the Federal Code of Regulations (Part 97 and all
that)
prescribes what are legitimate motives for being a ham. It doesn't
use quite the same words, but I seem to recall specifying public
service,
maintaining technical and communications skills, etc.

We're not each supposed to be making up our own motives.

They do. But to a far lesser degree - I have done many quick a/b

Off subject reply to above ***** The thing I find even more
frightening than the possibility of felonious crimes being committed
by the leader of the free world, is the abysmal judgment. According
to people who knew her in High School and College she was almost
neurotic about sexual fantasies. This "near child" gets a job in the
White House where you would hope she would be protected from the
advances of men more than old enough to be her father. Instead, our
President chooses to have an affair, in the WH, with this kid. This
level of poor judgment is terrifying in the man who has his finger
on the nuclear button. One of the media apologists commented that
"after all, so many married men are having affairs these days". I
would disagree. I think tens of millions of men only have eyes for a
beloved xyl.

You dead wrong Jim. If and when I get to 13 I will certainly take the test.
Your attitude is terrible though. You flame me for my opinions, bust my chops

because my opinion differs from yours. I continue to work on my speed and you STILL bust my onions. Way to go. Your being a real big help to the hobby. I know about NCI, haven't joined. I do think the FCC and ARRL are finally seeing that the code is not helping the ham ranks today. Upgrading is down. Tech numbers are up. It doesn't take a brain surgeon to see the problem. Something has to be done. If they lowered the code speed for general I'll bet there's a BIG influx of us Tech pluses upgrading. Lower the speed, add more technical questions. What's the problem? It doesn't lower the standards, if anything it betters the standards, makes us more technically up to snuff.

73,
Tom

There is also another method to reduce the amount of noise. Add small, conductive (to static electricity) balls on the tips of the elements. The USAF did this to many of the antennas they used for SAC fast-talk systems. It was tried and proven by Art Collins.

Uhh, Jim I am stuck at 50Mhz and up. I have heard some CW calls on 50.200, but that is about it. I have ventured down to the 10 meter band and there is not allot of CW, if any, there either. Hey I would love a CW practice net on 6 meters.

As for your insinuation that I am looking for welfare, get a grip. You have not demonstrated a compelling reason CW is a better or worse mode for communication. Indeed, anyone can jump on 15 or 20 meters and work the world. That would be fun, fun that I would like to have, but requires zero talent. What freq.'s do you hang out on.

How many meteor sched's have you run? How about SAT's, that is what this newsgroup is about. How about some 6 meter work? What kind of tinkering have you done to work a Sat. How about any of the digital modes, or SSTV or better yet just NTSC.

And for that matter, why are you cross posting here for anyways, do you have some method of lofting P3D, hey I am all ears.

I gave you a cookie, I have learned 5 wpm, but that is not good enough for you, fine. What have you done for HAM Radio lately....with your key....

Stay logical, I will listen. So far your condescending attitude over a on-off mode is buying you nothing.

Jim,

I have no problem with working for something, but what is code going to buy me. I deplore wasting time, you learn that when you own your own business. I do understand its use with minimal equipment, and is the one reason I am learning it, obviously not to *your* satisfaction. I do want to play on H.F. with a home built rig. Work the world with a couple transistors. From what you stated, you will not be answering my CQ because it will be to slow for you.

What is your logical reason for CW usage?

Hey, I had my novice ticket 25 years ago, as you put it anyone can memorize - . but NOT really use it.

Christopher Cox

You guys keep implying that you can do CW without the mechanical key and electrical transceiver but I have yet to see anyone do it. Face it, the electronics in a modern transceiver are not appreciably different from the electronics in a modern PC. How you can use electronic transceivers, electronic keyers, and $100 paddles and still maintain that you are not relying on mechanical/electrical equipment is beyond comprehension.

Chris you have to cut ol' Jim a little slack the whole code thing is done, stick a fork in it. Those whose entire self concept is tied up in how well they can TRY to emulate a machine are naturally hurt and confused so they strike out.

Just remember the internet is a place where for about $20 a month you can make as much of an ass out of yourself as you wish. Think of Jim as a guys that wants to get the most he can for his money. I think he'll call me a name now thus making my point much more eleoquently than I ever could.

Perhaps quads are less noisy because the smaller conductor diameter does
not collect so many raindrops.

1707. QRP rig and QRP operating

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-20 00:00:00 UTC
From: Michael1998@webtv.net
Message-ID: <25478-35DCA25C-11@newsd-113.bryant.webtv.net>
Source record: 164328

I am just beginning to get into CW and QRP operating, and I was planning on eventually purchasing a QRP kit, such as the Ten-Tec 1340 for 40 Meters, and a simple straight key to connect to the QRP transceiver. I have a few questions for those of you that may have built one of the Ten-Tec kits, as well as those of you who are into QRP operating. Forgive me if these questions sound stupid, but remember that I am new at all of this. First off, how hard are the Ten-Tec kits to build, and what sort of tools and equipment do I need for this? I read the review of the 1340 in the September issue of QST, and it looks easy enough. I have plenty of screwdrivers and a simple VOM meter for making voltage measurements, and a low-wattage solder iron, but I don't have a Ham transceiver or a wattmeter at the present time. I do have a Sangean shortwave radio that should put me in the ballpark as to where my operating frequency on the rig is. I hope this is all I will need to build the kit, I may have to pick up a wattmeter at Radio Shack to get an idea of where I stand on the output power of the rig.
Secondly, if I purchase a straight key, will it work with the kit or do I need something else to make it work. How do I go about hooking up the straight key to the rig? Do I just go out and buy some wire and solder the two pieces of wire onto a plug? I was considering the MFJ straight key that sells for around $10, will this work? Also, since I live in an apartment on the ground floor, what would make a good, simple yet effective QRP antenna? I have an overhang here about 9 feet off the ground and about 20 feet wide that I could probably put a dipole on. Do I need to purchase an antenna tuner, if so, what would you recommend for someone on a budget? If anyone can help me out that may be into QRP operating, or has built one of the Ten-Tec kits, I would greatly appreciate it.

73,
Michael Brown KD4UXW

1708. The President Clinton Radio!

```
Announcing the new President Clinton radio!

Specifications

- AM/FM/BS
- NOAA weather channel - Helps to avoid Whitewater.
- Hot pink background - A shocking display!
- Hide away features - Except for one big knob.
- Weighted flywheel tuning - Lets you put the right spin on things.
- Digital speech filter - Automatically obscures your sentences.
- Pre-programmed autopatch speed dialer - A nationwide list of Bimbos.
- Hoards all the power it can get.
- Jack for blow-dryer.
- Built-in after-shave and condom dispensers.
- Comes with a poorly crafted cabinet.

Keith Little

>net on 6 meters.

You're not stuck. You just decided you wanted to be stuck. There's plenty of
CW on 15,20,40, and 80 meters, plus the WARC bands. There will be plenty
on ten meters when the sunspots start working again. Bust out you code tapes,
go download a CW program, get your speed up and go where everybody is,
instead of wishing they'd come to six meters and visit you.

>As for your insinuation that I am looking for welfare, get a grip. You have
>not demonstrated a compelling reason CW is a better or worse mode for
>communication. Indeed, anyone can jump on 15 or 20 meters and work the
>world. That would be fun, fun that I would like to have, but requires zero
>talent.

I am not trying to demonstrate anything, Chris. If you want to jump on 15 or
20 meters, you have to pass a CW test at 13 WPM first. That's not a demo,
that's a fact. I think when or if you do get on 20 meters, you'll find that
working the world requires a lot more than 'zero talent', but that's something
you and a lot of other people are going to get to see for yourself.

>What freq.'s do you hang out on.

HF, six meters, VHF, UHF.

>How many meteor sched's have you run? How about SAT's, that is what this
>newsgroup is about. How about some 6 meter work? What kind of tinkering
>have you done to work a Sat. How about any of the digital modes, or SSTV or
>better yet just NTSC.

Never tried and meteor skeds, Chris. I'm a DX'er from the old school, I don't
believe in skeds or nets or stuff like that. I turn on the radio and work what
I can find.

My satellite career is over, Chris. First I tried the VHF up/10 meters down
ones, years ago. Then some of those funny Russian cross band HF ones.
Then AO-13 for a bit. Next Uo-22, Kitsat, the digital ones. Wanna buy a Trakbox
and a Paccom NB9600/PSK modem ? Packet, RTTY, been there, done that. I still
have SSTV, but I find that extremely boring because the average ham on SSTV has
two pictures. Six months of SSTV on HF, and you've seen every picture you're
ever gonna see. Ever tried to work anybody on SSTV with 20 meters open to Europe
?

>And for that matter, why are you cross posting here for anyways, do you
>have some method of lofting P3D, hey I am all ears.

Cross posting where ? I am reading all your messages in .MISC, where
are you ?

>I gave you a cookie, I have learned 5 wpm, but that is not good enough for
>you, fine. What have you done for HAM Radio lately....with your key....

I don't have a key, Chris. Too slow. I have a few sets of paddles, and a few
keyers, but no key.

You learning CW at 5 WPM didn't give me anything, Chris. It gave you the
opportunity to get started in ham radio. Stop whining and take advantage
of it.....

That's not illegal. Lying about it under oath *IS* illegal. If Clinton had
not lied, he wouldn't have the problems. The first charge against Nixon was
that he lied to the American people.

After two years of trying, I would suggest that Tom go to a doctor to see
if there is any physical impairment that interfers with his ability to copy
Morse code. 99% of the population don't do Morse code. To the best of my
knowledge, no scientific study has ever been done to find out the facts
about the Morse code capability of the general population.

Two problems with a PC power supply. If the PC is fully loaded you might be near the upper load limit of the supply. Also if you do use the PC supply you will introduce the digital RF noise into your shack by putting two unshielded/filtered lines from the PC into the rats nest we all know as the power/coaxial bundle behind the op table...

I'm not a HAM but I can tell that you are full of shit. The amateur
radio leagues in my state are well organized and well regulated. In any
type of emergency or disaster situation they are (more than) prepared to
take control and provide essential communications - even when your
police radios fail.

> radio frequencies. Your doing so could cost someone their life.

Excuse me? If I use a two-way radio to save someone's life, how could I
"cost someone their life?" Are you referring to a "startle reaction"
when the officer hears my pleas for help, and is awakened from his nap,
or he spills some Dunkin' Donut coffee on himself?

> If you want to transmit on Police radio systems get permission from the Chief
> or Sheriff of that system before doing so. Otherwise STAY OFF!
>
> COP

Good idea! If I witness a robbery, rape, or shooting I'll call the
police chief at home and ask if I can use their repeater for 10 seconds.

Great Idea!

You're Busted!!!!!

CopBusters

1727. FS/TRADE: Whites XLT for HAM Equipment

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-21 00:00:00 UTC
From: Ernie Dean <efdean@bellsouth.net>
Message-ID: <ZXiD1.940$je.2077796@news2.atl.bellsouth.net>
Source record: 164149
Cross-posted to: rec.radio.swap,rec.radio.amateur.swap,rec.radio.amateur.misc,rec.radio.amateur.equipment,alt.treasure.hunting

Would like to trade metal detector for transcevier around $550 in value -
some tube units finals OK. Please don't try and offer a $300 piece of equipment
unless you've also got $250 cash your willing to part with.
Specifics for this unit: is about 2.5 maybe 3 years old. D/C number inside
battery door indicates manufactured around August of 95.
Software version is 1.1. Unit is in excellent working condition, appearance 8.5
out of 10. Arm pad, strap and grip are not worn or torn.

Here's a list of everything I'll ship:
> XLT, Charger, Batteries, Manuals in Hard Case
> Has coil cover and weather covers for LCD and electronics unit.
> Sand Scoop
> Small Garden type shovel
> Stainless Steel Hole Hog (precision hole digger)
> Homemade ground probe (modified screwdriver)
> Advanced Water Working Techniques BookLet's
> Talk Treasure Hunting Book
> Military type canvas pouch (clips on belt)>

The least I will take for the unit is $550 plus $20 UPS shipping if
you send a money order in advance. If you want COD then the shipping
increases $10 to cover the CASH ONLY collection charge.
To see specs and picture:
http://www.treasurenet.com/whites/products/spectrum.html

Feel free to call me if your still interested.

Special Event W2GSB/Lighthouse

Fire Island Lighthouse, Fire Island National Seashore, Fire Island New York

As part of Lighthouse/Lightship Activity Weekend, members of the Great South Bay ARC, and Islip ARES will operate from the Fire Island Lighthouse, ref #670 (IOTA NA-026, USIA NY-013-S), Aug 22 and 23, 1400-2200Z signing W2GSB/Lighthouse. SSB on IOTA frequencies, CW as announced.
A QSL certificate will be available. QSL direct only with a 9x10 SASE or #10 SASE to: Rich Tygar AC2P, 5 Chelmsford Dr., Wheatley Heights, NY 11798
Addition information at www.gsbarc.org or via e-mail info@gsbarc.org

73 - W2GSB - Great South Bay ARC

>
> He has a PRIVATE LIFE.
>
>

Yes - The President has a private life - but only in a very limited sense. Certainly not in the way you and I would define private in our lives. The CEO's of IBM and Pepsi most definitely have a private life much as you and I would; but not The President of the United States. He is "on duty" for emergencies and "barely" emergencies 24 hours a day, seven days a week for his entire term of office. He lives in an international goldfish bowl where his slightest comment or action is immediately scrutinized by not only the international media, but by our enemies. Even when he is on vacation - it is a vacation in a very strange sense of the word. When ordinary folks like us go on vacation, most of us leave our pagers and cell phones home because we really want and psychologically need to get away from it all. The President does not have this luxury as the events of the last few days illustrate. The Secret Service is always within arms reach and is privy to his casual and intimate remarks to golf partners and what not. All this is clearly not how most of us would define privacy in our own personal lives. I personally do not understand for the life of me why someone wants to be President. It would seem to me to be a horrible and underpaid job considering the devastating responsibility and the physical and psychological toll it must take. However, those who are hell bent for leather to seek this office, must accept the fact that their personal "privacy" exists in only the most limited sense of the word.

K4PG WINS SOUTHERN FLORIDA SM SLOT

Kevin M. "KB" Bunin, K4PG, has been declared elected as Southern Florida Section Manager. Bunin, who lives in Delray Beach, topped a field of three candidates for the post with 827 votes. Ed Petzolt, K1LNC, got 691 votes; Neil H. Lauritsen Sr, KA3DBK, got 400 votes. Ballots were counted August 18 at ARRL Headquarters. Bunin takes office October 1.

Three other new section managers also will begin their terms of office October 1. All three were unopposed for election. In Puerto Rico, Juan Escobar, KP4ZZ, of San Juan, replaces Guillermo Schwarz, KP3S. In Idaho,

Michael Elliott, KF7ZQ, of Boise, succeeds Mike Langrell, AA7VR. In Ohio, Joe Phillips, K8QOE, of Fairfield, replaces David Kersten, N8AUH.

Six incumbent section managers were unopposed for re-election and begin new terms October 1. They are Coy Day, N5OK, Oklahoma; Bill Kurtti, WC0M, North Dakota; Randy "Max" Wendel, N0FKU, Minnesota; Betsey Doane, K1EIC, Connecticut; Bill Thompson, W2MTA, Western New York; and John Ellis, NP2B, Virgin Islands.

Vermont got a new section manager on August 14. Bob T. DeVarney, WE1U, of Milton, succeeded Bernie Capron, N1NDN, who stepped down.

SPECTRUM BILL PICKS UP MORE SPONSORS

During August, HR 3752, the Amateur Radio Spectrum Protection Act, picked up seven new cosponsors. This brings the total to 64, plus the original sponsor Rep Michael Bilirakis of Florida.

The August additions include Rep Frank R. Wolf, Virginia; Rep Linda Smith, Washington; Rep George Miller, California; Rep Max Sandlin, Texas; Rep Lynn Rivers, Michigan; Rep William Goodling, Pennsylvania; and Rep Anne Northup, Kentucky.

The ARRL's Legislative and Public Affairs Manager Steve Mansfield, N1MZA, returns to the Hill the first week of September to prepare for Congress' return from its "district work period" the following week.

NEW SATELLITES GET OSCAR DESIGNATIONS

Amateurs radio's two newest satellites, TMSAT-1 and TechSat-1B, are reported doing very well after a month in space. The two birds were launched jointly in late July from Russia's Baikonur Cosmodrome. At this point, neither satellite is ready for general use. The two spacecraft continue to undergo initial loading of flight software.

Both satellites also have received OSCAR designations from AMSAT. TMSAT has been dubbed TMSAT-OSCAR-31 (TO-31), while the Gurwin TechSat 1B will be known as Gurwin-OSCAR-32 (GO-32). The assignment of consecutive OSCAR numbers to new Amateur Radio spacecraft is a tradition that dates from the launch of the very first Amateur Radio Satellite--OSCAR 1. In order for an OSCAR number to be assigned, the satellite must successfully achieve orbit and one or more transmitters must be successfully activated in the Amateur Radio bands. Then, the builders/owners of the satellite must formally request that a consecutive OSCAR number be assigned to their satellite.

TMSAT, the first Thai microsat, was constructed by Thai engineers in cooperation with engineers at the University of Surrey in the UK. It's primarily designed along the lines of a low-earth-orbiting communications satellite, similar to those in the Iridium constellation. The TMSAT control station in Bangkok is HS0AM.

Chris Jackson, G7UPN/ZL2TPO, reports that TMSAT commissioning has proceeded slowly for a variety of reasons. Jackson says ground control

stations have been operating the downlink transmitter mainly over Bangkok and Surrey. The satellite is also performing a number of new tasks that have not previously been used before, and this is taking some time to get fully operational in orbit.

Shlomo Menuhin, 4X1AS reports TechSat-1B is also responding well to ground control commands. Menuhin said the satellite recently took its first picture from space, centered over the French Riviera near San Tropez. The satellite contains an ultraviolet spectro-radiometer, a charged particles detector, and a superconductivity experiment, among other experiments.

Images from both satellites and access to additional information are available via the AMSAT Web site, http://www.amsat.org. Both satellites are expected to be available for general amateur use shortly.--thanks to AMSAT News Service

NEW YORK CLUB CREATES $100,000+ SCHOLARSHIP FUND

The Schenectady (New York) Amateur Radio Association (SARA) has used a trust established by the late William G. Broughton, W2IR--one of its most prominent members--to create a $100,000 scholarship fund. The scholarship will benefit college-bound hams in the Schenectady, New York, region. The stock transfer worth nearly $120,000 represents the single largest scholarship fund seed ever received by the ARRL Foundation, which will administer the fund.

The scholarship will be known as The Henry Broughton, K2AE, Memorial Scholarship. K2AE now is SARA's club station call sign. SARA established the scholarship to honor the memory of Henry Broughton, William's father. SARA says Henry Broughton's early work with Nikola Tesla exemplified the pioneering efforts of early wireless experimenters. William Broughton created the trust fund about 40 years ago in his father's memory.

Eastern New York Section Manager Rob Leiden, KR2L, said Broughton established the trust to help area amateur radio operators receive a quality education. "Bill understood that many college-educated amateur radio operators have made some of the most important scientific and engineering discoveries in this century," he said. "He was determined to do what he could to help maintain that record of achievement."

Applicants for the annual $1000 award must hold a General class or higher license and be accepted at or attend a four-year college or graduate program. Preference goes to students who live within 70 miles of Schenectady. Applicants must be enrolled in a course of technical study, such as engineering or the sciences, and academic excellence is the primary consideration. More than one scholarship may be awarded if the fund's earnings permit.

The Schenectady Amateur Radio Association and representatives from the American Radio Relay League celebrated the creation of the scholarship fund May 4, although formalities to establish the fund were only completed this summer.

16TH AMSAT ANNUAL MEETING AND SPACE SYMPOSIUM SET

The registration form and agenda for this fall's AMSAT Annual Meeting and Space Symposium now are available on the Web at http://pages.prodigy.com/DXHF93A. The symposium, set for October 16-18, 1998, at the Battlefield Inn, Vicksburg, Mississippi, offers a diversity of amateur radio satellite presentations. Among those on the program are:

* The History of the Amateur Radio Satellite Program, by Martin Davidoff, K2UBC.
* Antarctica and Amateur Radio, by Ron Ross, KE6JAB
* Working Satellites From Over 100 Grid Squares, Chuck Duey, KI0AG
* The Year 2000 Transition--Your PC and AMSAT Software, by Roy Welch, W0SL
* TRACKNET: An AMSAT Mobile Satellite System, by Bob Bruninga, WB4APR
* Development of Yet Another Housekeeping Unit for Phase 3D, by James Miller, G3RUH and associates
* SETI on the Cheap: Affording the Ultimate DX, by Paul Shuch, N6TX
* An EZ-Sat Update, by Fred Winter, N2XOU and Ken Ernandes, N2WWD
* JAWSAT Update, by Randolph Kohlwey, N7SFI
* International Space Station Status, by Will Marchant, KC6RCL
* The P3D Spacecraft Thermal Design, Dick Jansson, WD4FAB and Keith Baker, KB1SF

Other activities planned during the symposium include sessions devoted to a Phase 3D update and an introduction to Amateur Radio satellites by QST Managing Editor and satellite buff Steve Ford, WB8IMY. The Friday evening beginner's session on Amateur Radio satellites will be open to the public. The Saturday banquet speaker will be ARRL Vice President Joel Harrison, W5ZN.

Following the Area Coordinators' breakfast Sunday morning, participants will take a field trip to the US Army Engineers Waterways Experiment Station where--among other things--they will learn about using satellites to track sea turtles.

Transportation is available between the Jackson International Airport and the Battlefield Inn in Vicksburg. The Jackson Amateur Radio Club will host an AMSAT Welcome Table at the Jackson International Airport on Thursday and Friday, October 15 and 16, to assist with transportation.

The early-bird registration deadline is September 15. For more information, contact, Eddie Pettis, N5JGK, e-mail n5jgk@amsat.org.

MORSE MAGAZINE GETS NEW LEASE ON LIFE

The Morse magazine Morsum Magnificat, which had been on the verge of ceasing publication, has a new editor and publisher. Zyg Nilski, G3OKD, will take over the reins of the magazine following the publication of the December 1998 issue. The magazine's banner proclaims "Still flying the flag for Morse."

The magazine's current Consultant Editor, Tony Smith, G4FAI, said that subscriptions will be transferred to the new publisher. Nilski, 55, lives

in England and has been a ham since 1960. His almost life-long interest in CW encompasses line telegraphy as well as the history of telegraphy and Morse technology.

Morsum Magnificat was first published in Dutch in 1983 by the late Rinus Hellemons, PA0BFN. A special English edition was put out in 1985. The following year, Smith--a writer specializing in Morse topics (and later chair of the European CW Association) joined the magazine as its English language editor. When Hellemons died in 1987, the Dutch edition ceased publication, and the magazine moved to England. Since 1990, Smith and Editor Geoff Arnold, G3GSR, have jointly produced the magazine.

SOLAR UPDATE

Sun watcher Tad Cook, K7VVV, Seattle, Washington, reports: Solar activity was down slightly this past week, but conditions are still very good and activity is still up. The average solar flux for the previous 90 days rose from 112 to 114 this week, and flux values were about 20 points higher on every day, indicating a strong upward trend. The solar cycle is definitely out of the doldrums. For dramatic graphic evidence of the strong upward trend, check out http://www.dxlc.com/solar/

Activity should remain strong, with flux rising over the next few days to 142, 146 and 150 predicted for August 21-23. The planetary A index for the same period is predicted at 20, 18 and 10. Currently the A and K indices are rising as this is being written on Thursday evening, probably due to a major solar flare on August 18 as well as a northern polar coronal hole that extends somewhat down the solar surface. Additional flare activity could come from solar region 8307 before it departs around the end of August.

Solar flux should continue rising to around 160 for August 25-30, down to 150 around September 1-7, then up again around September 8 and 9 to 155. Watch for unsettled conditions around September 5-7.

Look for good 10, 12 and 15 meter conditions as we move toward the fall equinox in about a month. With higher solar flux, ten meters is opening up, particularly for those who live more toward the equator. Using a popular propagation prediction program, when I run a path projection for 10 meters to Ohio from my home in Seattle, the solar flux must be higher for good signals than if the path is from Los Angeles to Ohio. Los Angeles is nearly 1000 miles and 14 degrees latitude south of Seattle.

There were some interesting VHF propagation reports this week, with N0HJZ in Minnesota experiencing E-layer openings on both 6 and 2 meters to New Jersey and Connecticut, and 2 meter meteor propagation from Ontario. N5JHV in New Mexico worked several Europeans on 6 meters, and N9LR in Illinois worked WA2FGK in Pennsylvania on 222 and 1296 MHz via a tropospheric opening.

Sunspot numbers for August 13 through 19 were 109, 80, 106, 90, 90, 104, and 132, with a mean of 101.6. The 10.7-cm flux was 136.8, 137, 133.4, 139.7, 136.3, 132.6, and 134.6, with a mean of 135.8. The estimated

planetary A indices were 9, 7, 6, 5, 5, 6, and 9, with a mean of 6.7.

BENJAMIN J. FRIEDLAND, K2BF, SK

ARRL Hudson Division Assistant Director Ben Friedland, K2BF (ex-K2PBP), of Mendham, New Jersey, died August 3. He was 55. Described as a fixture in the Northern New Jersey ham community, Friedland was president of the New Jersey DX Association, former president of the Morris Radio Club, Morris County RACES Radio Officer, trustee of the Morris County OEM 2 meter repeater, and NCS for many on-air nets. Friedland apparently collapsed while walking his dog shortly after running the Monday night RACES net. His wife, Janice, a son and a daughter are among the survivors. Friedland served as the president and general manager of Morristown & Erie Railway Inc for 20 years, was a member of the American Short Line Railroad Association, and a board member of the International Telecommunications Association. Services were August 5. The family has asked that memorial donations in Ben Friedland's name be made to the Morris Animal Foundation, the Whippany Railway Museum, or the American Heart Association.--The Hudson Loop

THOMAS E. "ACK" ATKERSON, W4RRW, SK

Tommy "Ack" Atkerson, W4RRW, of Jasper, Georgia, died August 2. He was 66. The owner of Ack Radio in Atlanta and Birmingham, he had recently retired to the North Georgia mountains. Atkerson served in the US Air Force before joining his dad, W4ECI (also known as "Ack") in Ack Radio. Tommy Atkerson opened the Atlanta office and then took over the supply company when his dad died. Atkerson sold ham gear for many years, but when Collins, Drake, and Ten Tec left the dealer market Ack Radio concentrated on electronic supplies. "Tommy was always smiling, and that's what we will miss most," said Southeastern Division Assistant Director David Thompson, K4JRB. Atkerson's son Steve (not yet a ham) now runs Ack Radio. The latest Ack Radio catalog has pictures of W4ECI and a young Tommy.--thanks to David L. Thompson K4JRB

HARRY ANGEL, VK4HA, SK

Australia's oldest ham, Harry Angel, VK4HA, died August 16. He was 106. A native of the UK, Angel arrived in Australia via California after a trip around the Horn as a young sailor. He enlisted in the Army at the start of World War I and was on the first ship of Aussie soldiers to leave for the war zone. He was posted to a communications unit in North Africa. After the war, he settled in Brisbane and eventually opened a radio repair shop. He became a radio amateur in 1935. When World War II broke out, he fudged his age and re-enlisted, serving in a radio repair and maintenance unit in Brisbane. "A ham for 63 years and an active DXer until his 100th Birthday, he was not known for the 10-second QSO, rather than the rag chew, and as an ambassador of Amateur Radio for his adopted country in particular," said Al Shawsmith, VK4SS.--QNews

----

IN BRIEF:

* This weekend on the radio: The TOEC WW Grid Contest (CW) and the International Lighthouse/Lightship Activity Weekend are on tap this weekend. See below and June QST, page 87, for details. Just ahead: The SCC RTTY Championship, the Hawaii QSO Party, the BUBBA Summer QRP Spring, and the South Dakota QSO Party are the weekend of August 29-30. See August QST, pages 105-106 for details.

* Lighthouse/Lightship Activity Weekend: This weekend is International Lighthouse/Lightship Activity Weekend. The event--which is not a contest--begins at 0001 UTC August 22 and continues until 2359 UTC on August 23 that will take place from 0001 UTC. Operation will be on 80, 40, 20, 15, and 10 meters. Stations will be on the air from lighthouses and lightships around the globe. To assist in identification, stations will add "light," "LGT," "lighthouse" or "lightship" after their call signs. Event coordinator Mike Dalrymple, GM4SUC, says each station decides how it will operate, including modes and bands. There is no restriction on power. "We wish operators to enjoy themselves and have fun whilst making contact with as many stations as possible," he said. Dalrymple said he hopes the international scope of the event will draw some attention to the hobby. Details of the activity are available on the Web at http://www.qsl.net/gm3zdh or contact Dalrymple at gm4suc@compuserve.com.

* Correction: The report "ARISS Delegates Discuss Ham Radio in Space" in The ARRL Letter, Vol 17, No 32, incorrectly stated that IARU satellite frequency coordinators from Regions 1 and 3 attended the AMSAT-UK session. The report should have said that IARU Satellite Frequency Coordinator Graham Ratcliff, VK5AGR, and IARU Satellite Advisor Hans van de Groenendaal, ZS5AKV, also were on hand.--thanks to Ray Soifer, W2RS

* Clarification: In its amateur rules "streamlining" Notice of Proposed Rulemaking, WT Docket 98-143, the FCC appears to require that comments filed on paper in this proceeding be accompanied by a word processing file on a computer disk. The FCC's Monte DePont has stated that this is not a strict requirement, and the FCC will continue to accept comments on paper only, unaccompanied by a computer file on disk. Diskless commenters may include a footnote saying: "My comments are being filed on paper only without a diskette, since it is not feasible for me to include a diskette."--thanks to Nick Leggett, N3NL

* Vanity update: Despite the fact that the vanity call sign fee does not drop to $13 until after September 14, there's little indication that anyone is waiting for that to happen before filing. The FCC in Gettysburg reports vanity applications through July 31 were processed this past week. In two processing runs, there were 188 grants and 245 applications ended up in the work-in-process (WIPs) stack. Among the more interesting call signs among the last two batches: KC2NYC, N4FUN, WR4USA, K3SEX, K7BEE, and K2FLY.

* The Million QSL March: It must be sunspots. ARRL Outgoing QSL Service Manager Martin Cook, N1FOC, reports the service topped the 1,000,000-QSL mark in August. As of August 14, the service had mailed 1,009,150 cards to QSL bureaus around the world. That represents an increase of more than

204,000 cards from the same date last year--up about 25%.

* July QST Cover Plaque Award: The July QST Cover Plaque Award went to Dennis Bodson, W4PWF, and Steven Karty, N5SK, for their article "FAX480 and SSTV Interfaces and Software," on page 32. Congratulations Dennis and Steven!

* APRS frequency map on the Web: Jeff Brenton, KA9VNV, says he's maintaining an APRS frequency map at http://www.dididahdahdidit.com/APRSFreq.htm. A text-only version with more detailed comments is at http://www.dididahdahdidit.com/APRSFrqt.htm.--Jeff Brenton, KA9VNV

* DLARC marks 50 years: Congratulations on the Delaware-Lehigh Amateur Radio Club for reaching the half-century mark as an ARRL-affiliated club. Clarence Snyder reports he was looking through some old papers and came across the ARRL Charter of Affiliation for DLARC dated July 13, 1948.--Clarence Snyder, W3PYF

* Slovenia gets new bands: Hams in Slovenia, S5, have been granted access to four new bands: 136 kHz, 70 MHz, 3.4 GHz, and a new 40 MHz "beacon band." The 40 MHz band is for beacons running narrowband FSK CW only. The frequency limits are 40.660 - 40.700 MHz, and the power limit is 10 dBW ERP. This is part of an IARU Region 1 initiative to obtain spectrum at 40 MHz for DX beacons, as an aid to propagation investigation, but it appears that Slovenia is the first country to make the allocation available.-QNews via RSGB and IRTS

* Turkey added to reciprocal, third-party lists: The ARRL (and the FCC) have belatedly received word that Turkey (TA) has signed a reciprocal operating arrangement with the US that permits hams of either country to operate in the other country. Turkey also has joined the list of countries that permit hams to handle communications on behalf of third parties.

==========

The ARRL Letter is published by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, W6ROD, President; David Sumner, K1ZZ, Executive Vice President.

Circulation, Kathy Capodicasa, N1GZO, e-mail kcapodicasa@arrl.org. Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit the ARRLWeb page at http://www.arrl.org.

The purpose of The ARRL Letter is to provide the essential news of interest to active, organizationally minded radio amateurs faster than it can be disseminated by our official journal, QST. We strive to be fast, accurate and readable in our reporting.

Material from The ARRL Letter may be reproduced in whole or in part, in any form, including photoreproduction and electronic databanks, provided that credit is given to The ARRL Letter and The American Radio Relay

League.

==>How to Get The ARRL Letter<==

The ARRL Letter is distributed directly from ARRL HQ only to elected League officials and certain ARRL appointees and to paid subscribers of the now-defunct hard-copy edition of The ARRL Letter. For members and nonmembers alike, The ARRL Letter is available free of charge from these sources:

* The ARRLWeb page (http://www.arrl.org/arrlletter/). This version of The ARRL Letter includes any photographs. (NOTE: The ARRL Letter will be posted as soon as possible after publication. Please be patient.)

* The HIRAM BBS: 860-594-0306. (NOTE: The ARRL Letter should be available via the HIRAM BBS no later than the Monday after the date of publication.)

* The ARRL Technical Information Server (InfoServer): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published every Friday). For example, to request The ARRL Letter file for Friday, January 3, 1997, you'd type "send ltr0103.txt". Then, on a separate line, type "quit". (NOTE: The ARRL Letter should be available via the InfoServer no later than the Monday after the date of publication.)

* The Netcom server, run by the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list".

* CompuServe and America Online subscribers, as a downloadable text file in the services' ham radio libraries.

1732. Re: Upgrading License

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-21 00:00:00 UTC
From: bb840@scn.org
Message-ID: <Ey1y5G.HA5@scn.org>
Source record: 164154

In a previous article, jeff@campbellcounty.com (jeff) says:

>I was thinking of upgrading my license from Tech no-code to General
>(skipping Tech+). But, with all the talk of restructuring the license
>classes, should I wait until something is done before I start studying
>for a test thay may be obsolete before I get to take it? When was the
>last time the FCC updated the General class question pool ? Also, Id
>like to hear some stories of how you all learnt morse code and your
>recommendations. Please Re: via email, the news server at my ISP doesnt
>work properly half the time..
>
The only benefit you might have by waiting is a slight possibility that
the code test for General might be lowered from 13 WPM to 10 WPM or
5 WPM. The disadvantage is it might be a very long time before the
changes are made (whatever those changes turn out to be). By upgrading
now you will have access to the HF bands now, not later. And, upgrading
to Advanced gives you access to all the HF bands except for the small
portions reserved for Extras, this by taking only one additional written
test (no additional code test).

In summary, go for it now, don't wait.

Hey if your not a HAM how can you speak for the HAM community? I know for a fact since I am a HAM and can tell you that the trunk systems we have will out do any ham system. If ours have a problem, which it hasn't since it was installed three years ago, and makes the system in-operable there are other city's radio systems that are programmed into our radios that we can use. Also most HAMs are just WANNABEES and are not trained properly. For my police certification I had to go to the law enforcement academy for 560 hours of training, take a state test, go through a training period with a training officer and all the while taking other classes to keep my state certification.

Also if you witness a robbery, rape or shooting please use a phone to report it. Don't try and play COP......Give the person answering your call all the information you can and let the Police handle it.

But I guess with the attitude you have towards the Police maybe you should handle every situation yourself and don't bother the COPs that are at the "Donut" shop.

Friday, August 21, 1998

Hurricane season is beginning to heat up in the Atlantic. Bookmark the Hurricane Frequencies page now, so it will be easy to find when you need it!

Hurricane Frequencies is a list of more than 150 selected frequencies below 30 MHz that carry hurricane-related traffic during the hurricane season.

Times and frequencies are subject to frequent change, and are listed for reference only. Updates are published as information becomes available.

The list includes
- U.S. federal, state and military agencies
- U.S. Coast Guard weather and nets
- National Hurricane Center, FAA, FEMA
- Hurricane reconnaissance aircraft (hurricane hunters)
- Commercial weather broadcast stations
- Amateur radio emergency and disaster nets (ARES, RACES, etc)
- SSB, CW, FEC-SITOR and facsimile modes

Several links to current tropical storm information pages are provided.

Hurricane Frequencies can be found at:
http://members.ecom.net/~snyder/index.htm

I can understand why you are no longer a Police Officer. With your language
and attitude I would not want you on my Police force. What did you do that
was so dishonest that you left or were you asked to leave?

Why are you so stuck on someone having a call. Is that all you can say about
yourself is that you have a ham ticket so everything you say is truthful. You

let everyone here in the NGs know it. What a big deal! If a person says he is a HAM then you should take his word for that.

Have a nice day.

SB SPCL @ ARL $ARLX007
ARLX007 Arnold R. Brilhart, K6GF, SK

ZCZC AX07
QST de W1AW
Special Bulletin 7 ARLX007
From ARRL Headquarters
Newington CT August 21, 1998
To all radio amateurs

SB SPCL ARL ARLX007
ARLX007 Arnold R. Brilhart, K6GF, SK

The ARRL has learned that ham radio pioneer Arnold R. Brilhart, K6GF, of Vista, California, died May 17. He was 93. Licensed as 2DN in Yonkers, New York, sometime prior to 1920, Brilhart was the operator of one of the stations participating in the second ARRL transatlantic tests in December 1921. The spark signal from 2DN was heard calling 8AYN on December 11, 1921, by Paul Godley in Scotland, and the call sign is among those on the cover of the January 1922 edition of QST. ''The Story of the Transatlantics'' appears in the February 1922 QST.

More recently, Brilhart was in the news following California's disastrous Loma Prieta earthquake in January 1994 (a photograph of his squashed car appears on page 14-3 of The FCC Rule Book and on page 21 of the August 1994 QST).

Brilhart's fame extended into the area of music. He was a well-known jazz musician and had designed mouthpieces for woodwinds. A saxophonist, Brilhart was considered an expert on the subject of reeds, mouthpieces and woodwinds.

An ARRL member, Brilhart had often been in touch with League Headquarters. He continued to be active and reportedly was working in an organ manufacturing plant when he was well into his 80s.

A memorial service was held May 28 in California.

You said the magic word "trains". I and three other hams I know are reserve deputy sheriffs and have gone through 560 hours of training, on the job training, state test and we continue taking classes to keep certification.

The problem I am relating to is the WANNABEE HAM with no training but picking up a HT and thinking he is a COP.

No you get real. He did not say it was a family member. I agree, if it is a family member I will get involved, but then again I am trained to handle situations like that and if you are trained then be it. Most people who intervene find themselves either hurt or dead because they don't know what to do.

Believe me, I know what to do about a rape in progress. If
there's a risk that I will be hurt or killed in my attempt
to do what's right, I'll accept that risk.

A robber pulled a knife on a Circle-K employee in Phoenix
last year. Two ordinary customers with concealed carry
permits pulled out 9mm's and made a citizen's arrest.
Criminals in AZ never know who around them might be packing.

this notion that only well-stocked laboratories can build
advanced radio technology is simply loony. SSB was developed
widely by Hams, and the first SSB radios aboard a SAC bomber
were *HAM* radios put there by a rather famous ham, Gen.
Curtis LeMay. he wondered why hams had better technology,
so he took matters into his own hands.

much later...

I was an active worker in the AMRAD effort when we did the work
that got the first STAs for Spread Spectrum, and which resulted
in the official SS privs we have now. the interesting part
of the exercise was to learn enough about how it really works
to translate the "why use lead when gold will do" military
designs to something a ham can build with parts from Radio
Shack (or at least Mini-Circuits). the results were new
FCC approvals for VHF SS (alas, they didn't allow the HF
stuff we had going under the STA), a new section in the
Handbook, and several issues of QEX outlining how to build
and assemble your own SS gear (both DS and FH). most of
this was done in Dave's basement (K8MMO) and Andre's
spare bedroom (N4ICK).

AMRAD was also instrumental in getting Packet off the ground,
both AX.25 and IP, and did a lot of work over the years.
Terry Fox's name is on the AX.25 spec (WB4JFI).

I can think of only three or four people in AMRAD who have
day jobs doing RF stuff. the rest of us read the books,
scratched our heads, argued over lots of pizza, and built
things.

While there are certainly a few Extras in AMRAD, the vast
majority are Tech-Plus and generals, with a batch of NoCode
Novices doing data. One of our TechPlus guys is one of the
luminaries in local ATV, and Bob Bruninga of APRS fame is
an old AMRADer (i think he's an Extra). and I almost
forgot, AMRAD built and orbited AO-27 - a project headed by
a lowly TechPlus. to do that, AMRAD did have to build a
modest clean room in some borrowed office space.

If you whiners wanna sit around bemoaning the sad state of ham
radio and don't do anything about it, it's your own damn problem.

The ability to contribute to this hobby has nothing to do
with license grade, rather the grade of your motivation.

-mo

Michael Brown wrote in message
<25478-35DCA25C-11@newsd-113.bryant.webtv.net>...
I am just beginning to get into CW and QRP operating, and I was planning on eventually purchasing a QRP kit, such as the Ten-Tec 1340 for 40 Meters, and a simple straight key to connect to the QRP transceiver. I have a few questions for those of you that may have built one of the Ten-Tec kits, as well as those of you who are into QRP operating. Forgive me if these questions sound stupid, but remember that I am new at all of this. First off, how hard are the Ten-Tec kits to build, and what sort of tools and equipment do I need for this? I read the review of the 1340 in the September issue of QST, and it looks easy enough. I have plenty of screwdrivers and a simple VOM meter for making voltage measurements, and a low-wattage solder iron, but I don't have a Ham transceiver or a wattmeter at the present time. I do have a Sangean shortwave radio that should put me in the ballpark as to where my operating frequency on the rig is. I hope this is all I will need to build the kit, I may have to pick up a wattmeter at Radio Shack to get an idea of where I stand on the output power of the rig.

You seem to have the minimum equip needed to build... IF your SW rcvr has a ssb or CW mode, i.e. it has a BFO. You don't really need a wattmeter... who cares whether or not you are running 2 watts or 2.2 watts. That will only be a very very small fraction of an S unit. Don't worry too much about it. If you make a contact, you got enough power out. Hey... it's QRP!

Secondly, if I purchase a straight key, will it work with the kit or do I need something else to make it work. How do I go about hooking up the straight key to the rig? Do I just go out and buy some wire and solder the two pieces of wire onto a plug? I was considering the MFJ straight key that sells for around $10, will this work?

Yup, yup, yup, and yup. The cheap key from MFJ should do you just fine for now. When you try to get up over about 15 WPM, you may appreciate a nicer key, and at 20 you really need a better one, with a steady base and lots of adjustments. I build mine. You can too... a piece of a hacksaw blade, a drawer knob, a board, and some wood screws are all you need. You can tear apart an old relay and solder the contacts into the drilled out heads of wod screws for contacts. This key can be fairly elaborate, and the various tension, gap, and height adjustments are limited only by your imagination. All a key is is a switch, normally open. You COULD get a nice electronic keyer, and hook up a set of paddles, but I urge you to develop a nice clean fist on a straight key first. If you can't send well timed code with a straight key at 5 to 10 WPM, you probably will sound pretty bad at 25 with a keyer.

Also, since I
live in an apartment on the ground floor, what would make a good, simple yet effective QRP antenna? I have an overhang here about 9 feet off the ground and about 20 feet wide that I could probably put a dipole on. Do I need to purchase an antenna tuner, if so, what would you recommend for someone on a budget?

A dipole is a FB first HF antenna. It is easy to build and fairly effective. I personally like an inverted vee, which is simply a dipole having the center feedpoint higher than the ends, which slant down at around a 20 degree angle. Usually, at resonance, this antenna will show you pretty close to a 50 ohm impedence. This is the same as your coax, and the same as the output of your rig. The nice thing here is that no matter how long the feedline, and no matter where you insert an SWR meter, you will see close to a 1:1 SWR WHEN the antenna is trimmed to resonant length. So, you can cut your antenna length just a bit longer than the formula calls for, then prune it for lowest SWR wich coincidentally will be the resonant length! With this antenna, properly set up, you will NOT need a tuner. Nor do you absolutely NEED a balun, though they are cheap and easily made, and often improve your radiation pattern. I recommend using one, since the cost or effort will be minimal. See the ARRL HANDBOOK for balun construction. Remember that you are QRP, so you could wind one on a very small form. If you don't have one, and get your rig built before you can find, buy or build a balun, and you want to get on the air RIGHT NOW, by all means go for it without the balun, but do think about putting one in as soon as practical.

If anyone can help me out that may be into QRP
operating, or has built one of the Ten-Tec kits, I would greatly appreciate it.

73,
Michael Brown KD4UXW

I haven't built a T-T kit, but I have done a couple of Ramsey kits, and one Oak Hills Research rig, and of course I have built a number of transmitters and a couple of simple receivers. All the transmitters were QRP, and I have worked QRP even with my TS-50S, by turning the 10 watt setting drive pot down to a couple of watts. QRP is a lot of fun, but it is not for the easily frustrated or the impatient. There is little in the way of instant gratification in this facet of amateur radio. 40 meters is perhaps not the best band for QRP, especially if you are confined to the Novice or Tech sub bands. When the band is open in the evening, you will be duking it out with half-megawatt European shortwave broadcasters. In the early morning you will not be bothered as much by stations across the atlantic, and the path will be open to the west. Below 7100 is okay except you will occasionally be clobbered by QRN from thunderstorms, especially in the summer. Probably the best Novice band for QRP is 15 meters. Low noise, and lots of opportunity for QRP DX. With a tuner, your 40 meter dipole will work fairly well on 15 meters, and you may even be able to use it without a tuner. Think about building a 15 meter rig too, and you will have a large chunk of the day and the night as well available to you for making QRP QSOs. 15 will open up for you around noon or early afternoon, depending on whether you are trying to

work east or west. As the sunspot cycle tops off, you will see all day and half the night openings at times. Expect 15, for now, to shut down about sundown.

1753. Sex Life and CW

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-21 00:00:00 UTC
From: jmslater <jmslater@mvillage.com>
Message-ID: <6rl4st$mu3$1@client3.news.psi.net>
Source record: 164175

It is strange to find out that ham radio can cause arthritus, but it is true. Bear with me just a little.

Back when I was a kid (and that's waaaay back), I used to use surplus transmitters from the WWII era. They were single band transmitters, mostly intended for airplane use, which could put out 90 watts of CW on any band through 20M and which cost the amazing sum of 5$ each back in 1954. They didn't have power supplies, but they did have a rock stable VFO built into them. If you could come up with a power supply, you had a very fine CW rig. If you happened to be a Novice (as I was), you could crystal control the 1626 oscillator easily and save the VFO for those days when you finally passed the General class exam.

I had an ARC-5 (several of them) and an Air Force surplus key, and I used to "pound the brass" for hours attempting to reach far away places.

What I didn't know was that the callous I was developing on the knuckle of the finger just to the right of the index finger on my right hand was a symptom of something that has just now started to affect me.

I was slowly injuring the knuckle of that finger, and would one day find out that it had developed "insult arthritus" in that place.

I went to the doctor recently and asked him about the finger, because it will no longer straighten out completely. It was then that he told me that I had a touch of arthritus in that joint, but he seemed puzzled about why only that one finger would be so afflicted. When I told him about my misspent youth as a ham, he came up with the "insult arthritus" explanation.

So beware: Don't mess around with CW too much or you could reach the bitter point that I have reached. With the longest digit of your right hand impaired, you won't stand a chance with girls like Monica Lewinsky.

Ham radio has destroyed my sex life, and I'm really bitter about it. I just may sue the ARRL.

TRUELY THE HAM EVENT OF THE YEAR FOR THE BUFFALO AREA!!!

The Greater Buffalo Hamfest and Computer Show will be held this Sunday. The location is the Hearthstone Mannor, 333 Dick Rd. Depew, NY. Take the NYS Thruway to Exit 52 (Walden Ave.) go east on Walden to Dick Rd., turn left on Dick Rd. and its is on your right.

Outdoor fleamarket starts at 6:00AM

Building opens at 8:00 for indoor vendors

Over 3 Acres of Fleamarket area
13,000 Sq ft of indoor space
Food- Breakfast, snacks, lunch
VE EXAMS
Free Parking
Prizes every half hour
Tailgating spaces free
Rain or Shine

FOR MORE INFORMATION, CLICK ON TO:
http://hamgate1.sunyerie.edu/~larc/buffalofest

Hope to see you there!!!

Well said, Mike.

BTW, I worked with the AMRAD gang back in the early days of packet, building VADCG TNCs and writing modified firmware for them. Them was the days.

Ploni, is that you? Have you given up your day job at the bus
station? Actually Phil used to post on Fidonet and his assigned
fictional job was at the bus station.

Seriously, it's telling that presidents like Jefferson, who were around
both in 1776 and 1788 or so seem to have a different interpretation
of what the Constitution entailed than those who advocate a return
to what the Founders intended. I'm not sure just what they would
make of folks who demand rights without paying the civic costs for
those rights either (Cecil, I'm not really commenting about you).
I'm also glad that those who argued for German as the official
language of the colonies because English was so repugnant
didn't prevail too.

Oh I see that's the "illegal" part, she was half his age, if she would have
been his age or older then it wouldn't hve been Illegal right ??

, on company time,

He has a PRIVATE LIFE.

>in the building owned by your employer,

Goofy Logic.

Jack Smith (GM CEO) would probably get fired for having sex with his _WIFE_ in
the GM headquarters in the Ren Cen Building with your logic Clinton should also
avoid sex with Hillary as the _BUILDING_ is owned by his employer.

and lied about it under oath, you
>should expect to get fired, as should Slick Willy.

Show me the _LAW_ that says "CONSENSUAL SEX BETWEEN THE PRESIDENT AND ANOTHER
WILLING _ADULT_ IS ILLEGAL." It's _NONE_ of the governement's nor Ken (NAZI)
Starr's Business.

40 _MILLION_ Dollars to find out the prez got a BJ from a CONSENTING ADULT.

ALL HAIL NAZI KEN !! Perhaps _YOUR_ _BOOKSTORE_ will be the next to get a
subpoena??

Will Nazi Ken make an end run around the court's decision and Subvert
Attorney-Client privelege when he comes after you next ??

Show me where Clinton getting a BJ from a consenting ADULT is either a "HIGH
CRIME or MISDEAMEANOR" for which a president may be impeached.

We _DO_ have a judge wanting to talk to Ken (NAZI) Starr about _ILLEGAL_
_ACTIVITIES_ , the _LEAKS_ from the Special Prosecutor's Office and NAZI Ken's
Conversations with the press regarding the "Investigation."

You get on the other side of the law for some (even minor) infraction and have
some Nazi prosecutor after you like Ken Nazi Starr and you'll think
grey-bearded McGovernite.

40 _MILLION_ dollars spent and we wind up with a consensual BJ.

Jobs like Electrician are inherited. People who try to be
electricians are hated by the families who are already doing that job.

What we do is have you get left handed monkey wrenches and sit you
in the front row of stripper bars and get you drunk and hand you dollar
bills.

We are not supposed to get you electricuted so much anymore...
its a new day and age.

The new guys in radio... well we make out like your radio comes
on 4 am in the morning and you go over to answer it and it was off.

Is that hate?

He has private quarters too. We don't provide him with the Oval Office for such.A
few months ago he was trying to claim immunity from prosecution under the
Sailors and Soldiers Relief Act, and that it applied to him as he is on active duty

as Commander in Chief. Now comes all the career military men recently who
had their careers ruined and some went to jail, for having consensual sex with
juniors. An intern is certainly junior to the Pres. Maybe a court martial for
Clinton
is in order..??

1779. Upgrading License

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-21 00:00:00 UTC
From: jeff <jeff@campbellcounty.com>
Message-ID: <35DD48BB.AF6B8A8F@campbellcounty.com>
Source record: 164210

I was thinking of upgrading my license from Tech no-code to General (skipping Tech+). But, with all the talk of restructuring the license classes, should I wait until something is done before I start studying for a test thay may be obsolete before I get to take it? When was the last time the FCC updated the General class question pool ? Also, Id like to hear some stories of how you all learnt morse code and your recommendations. Please Re: via email, the news server at my ISP doesnt work properly half the time..

QST de W1AW
Propagation Forecast Bulletin 34 ARLP034
From Tad Cook, K7VVV
Seattle, WA August 21, 1998
To all radio amateurs

SB PROP ARL ARLP034
ARLP034 Propagation de K7VVV

Solar activity was down slightly this past week, but conditions are still very good and activity is still up. The average solar flux for the previous ninety days rose from 112 to 114 this week, and flux values were about twenty points higher on every day, indicating a strong upward trend. The solar cycle is definitely out of the doldrums. For dramatic graphic evidence of the strong upward trend, check out http://www.dxlc.com/solar/ on the web.

Activity should remain strong, with flux rising over the next few days to 142, 146 and 150 predicted for Friday through Sunday. The planetary A index for the same period is predicted at 20, 18 and 10. Currently the A and K indices are rising as this is being written on Thursday evening, probably due to a major solar flare on August 18 as well as a northern polar coronal hole that extends somewhat down the solar surface. Additional flare activity could come from solar region 8307 before it departs around the end of August.

Solar flux should continue rising to around 160 for August 25-30, down to 150 around September 1-7, then up again around September 8 and 9 to 155. Watch for unsettled conditions around September 5-7.

Look for good 10, 12 and 15 meter conditions as we move toward the fall equinox in about a month. With higher solar flux, 10 meters is opening up, particularly for those who live more toward the equator. Using a popular propagation prediction program, when I run a path projection for 10 meters to Ohio from my home in Seattle, the solar flux must be higher for good signals than if the path is from Los Angeles to Ohio. Los Angeles is nearly 1000 miles and 14 degrees latitude south of Seattle.

There were some interesting VHF propagation reports this week, with N0HJZ in Minnesota experiencing E-layer openings on both 6 and 2

meters to New Jersey and Connecticut, and 2 meter meteor propagation from Ontario. N5JHV in New Mexico worked several Europeans on 6 meters, and N9LR in Illinois worked WA2FGK in Pennsylvania on 222 and 1296 MHz via a tropospheric opening.

Sunspot Numbers for August 13 through 19 were 109, 80, 106, 90, 90, 104 and 132 with a mean of 101.6. 10.7 cm flux was 136.8, 137, 133.4, 139.7, 136.3, 132.6 and 134.6, with a mean of 135.8, and estimated planetary A indices were 9, 7, 6, 5, 5, 6, and 9, with a mean of 6.7.

The Ottawa Amateur Radio Club, Inc.
is pleased to announce its annual

Hamfest.

Saturday, September 5, 1998 (Labour Day weekend)
Tailgaters Open and Building Vendor setup: 9 am
Building Opens: 10 am until 1 pm

Carp Agricultural Fair Grounds
3970 Carp Rd (at Falldown Lane)
Carp, Ontario Canada
Highway 417 to Carp Road exit, North to the fairground

Cost:
$10/table (plus admission)
$5/tailgate (plus admission)
$3 general admission (includes door prize raffle, you must
be present to win.)

Talk-in on VE2CRA , 146.940 - Mhz
See the site on APRS

The OARC Hamfest is held at the Carp Agricultural Fair Grounds at the same
time as the Carp Farmer's Market. So in addition to their amateur radio
needs, guests can also enjoy stocking up on farm fresh produce or crafts
from local artisans.

For further information or reservations contact:

So try CW. Out of necessity, communications are much more concise on CW. You have to SEND code... all you have to do to transmit SSB is open your mouth and see what falls out. There are lots of good phone ops out there, but the mode lends itself handily to liddish practices.

On the other hand, poor message content is a lot more forgiveable on fone. After all, how many of us speak in the most efficient manner possible in person? Normal conversation carries a lot of dead wood, and we generally just dis-regard all the overhead. You would never send "Ummm..." or "Know what I mean?" over CW, or even RTTY, but you hear it in plain speech. It should surprise no-one when they hear similar stuff during an informal fone QSO.

I think a lot of the problem involves the sender not wanting to relinquish the freq to the station he is working. Normal speech is full duplex, full break-in. You can't stop the other guy from breaking in, nor can he you. Both speakers can hear the other while each is himself talking. Many people just can't stand to be interrupted, but that is a fact of life in person to person direct conversation. On SSB, though, even with VOX, the other guy can't break in, as long as there are no long pauses during the transmission to allow the T/R relay to drop. So, the guy who usually has to tolerate interruptions in person need not concern himself on SSB, as long as he keeps talking. If you don't really have a lot to say, but you want to keep on talking, you gotta throw even more dead wood in there than you use during normal speech.

Consider a telephone conversation. You can talk and listen at the same time. Full duplex. You don't have to keep talking, since the other party can interrupt at will anyway. Now... wouldn't it be interesting to see full duplex fone QSOs on HF? I bet content would improve somewhat. The urge of the ratchet-jaws to keep that relay in leads to a lot of the stuff you complain about.

All US fone ops on HF had to learn the code. But what the code exam did not test, and an important skill learned best by operating CW for a while, is being concise and efficient when sending. These skills could carry over well into

fone operations, if they were only learned well in the first place. Just one more reason CW should be the ham's initial learning environment, whether or not it is required by the rules.

my .02 again.

>members a virtually unlimited number of screennames, ain't it?
>

Yeah, but how many times a day do you want to change your screen name setup, Drew? It is not really you personally that they are killing... it is the usuall style and content of your posts. When a new guy appears on the group, and posts similar crap to your usually negative and non-productive, non-informative bandwidth-sucking nonsense, the fact that it is distrbingly similar to your style and indicates the possibility that the new guy may be you, is besides the point. The new name gets plonked too, if the reader doesn't like to wade through that stuff.

If you want to alias and spoof effectively, you must change more than just your screen name. You must change content as well. Remember radiodude@dejanews.com? That was me. Figured I'd have a little fun at your expense but got bored with that.

I know you are capabe of serious, insightful, non-offensive posts. I think I remember seeing one or two. If you don't wanna get plonked, just don't post anything you wouldn't say in person in front of witnesses. You are entertaining nobody but yourself with your personal attacks on people, and informing nobody at all on any topic related to amateur radio.

Yeah, aol lets you have 5 screen names, and change them at will. You ca post or email through sites like deja news. So?

What I dislike most about aol, and one reason I am soon to switch to gte.net, is aol doesn't allow truly customizeable newsgroup filtering, since you are pretty much stuck with their proprietary reader.

BTW, I just set up AOL 4. A big improvement over ver. 3.0. Check it out, Drew, and all other aol-ers.

Can't wait to see your usual insightful, witty, urbane reply.(NOT!)

Hi,

I'm A Ph.D. candidate working on a study of the Vietnam War home front. Specifically I'm examining the experiences of the wives, mothers and girlfriends of the American soldiers who fought in Vietnam. Many of the

women who are participating in my study have told me about receiving phone calls that were "patched" through the MARS Network. They have described the kindness of the volunteer ham radio operators that helped connect them with their loved ones, and even told of some operators who paid for the cost of a long distance phone call. I would appreciate hearing from any person who worked as a MARS Network volunteer during the Vietnam War. Also any Vietnam Veterans who have anecdotes about placing these calls would be appreciated. Please respond to vlaffey@edgenet.net. Thanks in advance.

Give it a break already, Drew. By your criteria, NOBODY is disabled. Practically ANYBODY can do SOMETHING. Even if it is only to remain propped up on a corner, staring through unseeing eyes out into the street, with a tin cup and a sign hung around your neck. If a person has some infirmity, handicap, r permanent injury that prevents him from doing things that are normally do-able by most ordinary people, he is disabled, and that is that. Check your dictionary for a more precise definition. People who suffer disabilities incurred while serving in the armed forces are entitled by law to their pensions, the amount of which depends on level of disability, among other factors. By law, Dan appears to be entitled to his pension, just like thousands of other disabled vets. If you have a problem with that, then your problem rightly rests with the laws concerned, or the many doctors who have determined Dan's level of disability. Everything here seems in accordance with the law, so if you don't like it, change the law.

I would sure like to be able to imagine the shoe being on the other foot... I could just picture you being a disabled vet, unable to hold onto a normal job... hmmm... hold onto a normal job... well that IS easy to picture. But now that I think of it, in my wildest dreams I don't think I could see you as a vet, disabled or otherwise.

I find it interesting that your opinions annd views on the appropriateness of Dan's pension are not nearly as widely shared as are those who think you are way off the mark. You flame anybody who tells you like it is on the subject, or if you can't think of an answer, you just use one of your famous one-liners that has little to do with the subject. Well, here I am, alias-boy. Fire away. Come on... lets see some of that famous Drew Durigan wit. Whattaya got for me, Big Ol CBDumbo?

Theliceboy removed big al's whitedrip from his chin and drooled:

<nothing of any consequence>

Say, tick BOY, you seem to be the expert on the gay lifestyle. Perhaps you and K4OKA take turns picking the lice out of your hair. He sure does sound like your type, old and a hermaphrodite.

I found that the EMTECH kits are fairly easy since you build the
product in steps and you test out sections at a time. I went 3-5
on the receiver where I messed up something but caught
before moving on. Only others things I needed was a
magnifying glass to read the values on the caps, some alligator
clip - jumpers, small screwdriver set. The swr bridge I had was
worth it since there was some if cans to adjust. So a field strength
or swr bridge is handy. I did get one bad pnp xstr and was
short one fet in the kit, but Rat Shack stuff worked fine.

I've never known anyone who could copy radio waves in their head either.
You need technological equipment to do radio communications of any sort.
You need a demodulator to translate any radio signal into something you
can use. Whether that demodulator is a product detector, a discriminator,
or a TU is irrelevant. They all are technological systems for translating
information into a form understandable by humans. What is relevant is
that some of them work better than others.

(And BTW, a TNC is specific to packet, other digital modes use TUs.
And while some of them can cost upwards of $300, just as radios can
cost upwards of $3,000, you can also build a very good TU for under
$10.)

>CW makes it more difficult to obtain a license, people generally appreciate
>things more when they are difficult to get. Having the license handed to you
>on a silver platter cheapens the hobby and invites trouble.

So, do you value your driver's license for what you did once, long ago, to
get it, or do you value it for what it enables you to do, today and tomorrow?
Are you collecting trophies, or tools you can use? You value a trophy for
what you did once to get it, but otherwise it just sits on a shelf gathering
dust. You value a tool for what it enables you to do, today and tomorrow.
Is your amateur license a trophy or a tool. Mine is a tool I use every day.
If yours is a trophy, then feel free to admire it gathering dust on the shelf
with the other curios and antiquities.

>If you had to build a transmitter due to an emergency situation, a CW
>transmitter is easiest to build, and can permit worldwide communications even

>in the toughest band conditions. Try that with your pactor.

But what about that pesky *receiver*? All you CW transmitter builders seem to conveniently forget that stable narrowband receiver you also need. Now I can whip up a FM transmitter *and receiver* from 3 garden variety consumer chips (I've done it), and contact someone who may be close enough to actually render aid. Can you do the same?

I can also take your CW transmitter, add a 10 cent varactor and, viola, instant FSK transmitter. I also need that pesky receiver too, and need to add an opamp for a data slicer that you don't have to have. But a 10 cent opamp is performing the job of your wetware modem, faster and more accurately too. Yeah, I need a computer, 45% of American homes have one or more, I have over a dozen. But I *could* use a $2 PIC and a LCD panel if I wanted to build it all from scratch. In an emergency, however, I'd forego that luxury and adapt what is already at hand. In fact, it is a poor amateur indeed who doesn't already have at hand equipment ready to go in case of an emergency.

The time to build or buy is *before* an emergency strikes. It is called being prepared. Do you have emergency power? I do. Do you have spare radios? I do. Are you part of an organized emergency response network? I am. Etc.

>When CW is eliminated, then CB will increase by nine "new" bands and you'll
>hear "echo boxes" & "roger beeps" on your $1,000 rig as you attempt to work
>your best friend on pactor, and you shut off your rig in frustration.

Ah, the spectre of CB, the last refuge of those with no real arguments. How would a "roger beep" be any worse than the beeps you produce? As far as digital operations are concerned, that's just another noise to be contended with while getting the message through. Do you actually believe that digital operators leave the speaker on while in contact? How naive.

What we have *now* on HF is a bunch of CBers who can beep, some government tested as fast as 20 WPM. It would be far better if we had more people who were cognizant of improved communications techniques instead. Their skills and knowledge might even start to fulfill some of the charter purposes of amateur radio. Ancient telegraphers sure aren't doing that.

>Long live the KING, Long live CW!!!

Down with Monarchies!

Now in my 35 years as an amateur I've done my share of beeping. I was net control of a statewide traffic net for some years. But it is not something of which I am particularly proud. I did it, but I'm glad I don't have to do it anymore. There are better ways now. According to the Amateur's Code, an amateur is progressive, he keeps his station abreast of modern practice. It would seem that too many who worship king Morse fail to heed that credo since the best that they seem to be able to come up with is yet another tired MOPA design and a hoary old key. It would

be amusing if it weren't so pathetic.

Ah so! Now we know why it is the digis just jump on frequency even though
it is
already occupied.
I would assume anyone who intends to follow FCC rules would need to
ascertain that
any frequency they intend to dump a signal onto is not in use, at least by
listening for
activity, and preferably by sending QRL? or asking if the frequency is buly,
when on
voice mode. OK- you can't send QRL with a TNC, but you can at least listen
I always monitor the receive audio on my digital contacts- I want to know
what's going
on on the frequency, and it helps monitor band conditions
Maybe that's why he can "copy digital signals you can't hear"..

This guy is mired in ancient technology---he's a stuck record. NO one in
the world
worships anything electronic more than he himself--and he hates analog so much
he
won't even listen to his own digital sound on the reciever. *That* is
Pathetic. One might just as well use the Internet and not bother with all that

"radio" stuff.

You are looking too high!
CW is usually below 50.1000 !!! NOT up into the SSB portion..
try 50.1 and below...you WILL be surprised as to the amount of
6 CW there is...I once worked a guy in W2 land from TX on 6 using
a ICOM 551....with NO CW key...(the owner didnt have one..) I
WHISTLED into the mic (had a little chirp according to the other
station! & perfectly legal!! though I would not recommend it for
those with dry lips or poor whistling skills :)

Chris

I am selling a excellent condition Yaesu FT-2500M radio. I have had it 6 months and plan on purchasing the FT-100 (HF-70cm)radio with remote head. I will sell to the highest bidder. I will be away Mon - Fri next week on business and will check my E-mail Friday Evening (when I get back) and get back to all who make a reasonable offer. I live in Just south of Boston Massachusetts.

The Liberty Net and others is the reason I seldom get on voice any more.
Learn CW, it's not that hard and as far as I'm concerned, a lot more
fun. I enjoy a novice contact at 5 WPM as well as one at 20 WPM.
However, I noticed I'm getting rusty trying to copy 20 WPM anymore.:^)
Don't let the people like those on the Liberty Net keep you away from a
great hobby.

Bob

Aloha from the Beautiful Island of Kauai,

Kauai Amateur Radio Club will be operating under the club call KH6E in the first ever Hawaii QSO Party Aug. 29, 1998. We will be running two stations from the QTH of WH6FG in Kalaheo. We just just completed setting up a 4 element 10m quad at 36ft and a A4S tribander at 60ft, we will also have wire loops up for 40 & 80m.

We are located in Kauai County, if you need a QSL card from this QSO party, please sent your request with an SASE PLEASE! Send cards and SASE's to our callbook address, 6605 Alahele St., Kapaa, HI 96746. QSL request without SASE's will be sent back via the bureau.

If you are interested, check out our website. http://www.KARC.net. Hope to work you during the first ever Hawaii QSO Party on Aug. 29.

Aloha..............

A call sign establishes your bona fides. I do believe that you have an amateur license with HF access, simple as that. Since your first reaction to my post was to accuse me of dishonestly I have to figure that this is a subject area you know well.

I find it interesting that cops always like to imply there was something wrong with someone who was a cop and changed professions.

This may streach your reading comprehension but give it a try.

Three times the money of any cop in my state.

An almost zero chance of someone shooting me at work.

Not having to put up with people who would regularly commit a felony(perjury) to convict someone of e petty misdomeanor(traffic violation) you know that happens regularly. People with that lack of moral fibre make me sick.

As to language ROTFLMAO read your own posts.

Sorry: no callsign=no ham live with it.

Jerry

Hi Bill,

This dweeb claims to be a cop thus having the moral imperitive to tell
others what to do. Note the lack of callsign I don't thik this guy is
even a HF licensed ham perhaps not even a real cop, most likely a fat
security guard in a dead end minimum wage job.

The internet is a place that for $20 a month you can be as much of a jachass as you want, this guy is getting full value for his money.

The recon vehicle just returned, and the mission was successful.
James O'Brien
3910 Hiram-Sudie Road
Hiram GA 30141
Said dwelling appears to be an old one story farm house with very
faded red paint. The dwelling appears to have been the victim of a
highway widening project several years ago, as it now sits approximately
six feet from a very busy two-lane highway. Residents of this dwelling
apparently enjoy the sounds of heavy traffic, day and night. Two very
long and deep skid marks were observed in front of the dwelling, as if
someone left or arrived in a hurry. There is no garage, only a rusty
carport shelter. Antennas of every description are on and around the
house, verticals, long-wires, etc. At least two antennas appear to
have been pulled up in trees by means of rope, where they swing in the
wind. A DBS dish was in the back yard. The grounds were very poorly
maintained and need of landscaping. Two vehicles were in the rusty
carport, one red Ford T-bird and one black T-bird. The black T-bird has
a busted out passenger window. Both vehicles appeared to be in poor
condition

Osama Bin Ladin:

"Thanks be to ARRL. It is hard for one to understand if the person does not understand Hams. In our religion we believe that ARRL created us to worship radio. ARRL is the one who created us and blessed us with this religion, and orders us to carry out the holy struggle "jihad" to raise the word of ARRL above the words of the unbelievers. We believe this is a form of worship we must follow despite our financial ability. This is a response to Westerners and secularists in the ARRL world who claim the reason for the awakening and the return to FCC restructuring is financial difficulties. This is untrue. In fact, the return of the people to ham radio is a blessing from ARRL, and their return is a need for ARRL.

This is not a strange issue. During the days of jihad, thousands of young men who were well off financially left the Arabian Peninsula and other areas and joined the fighting"hundreds of them were licsensed in Afghanistan, Bosnia and Chechnya. We pray ARRL grants them DXCC status.

BEWARE W6EEV JOSEPH VEGA
POB 1479 Alhambra, CA. 91802
Doing Business As- Pacific Western Recovery
Phone Number 626-457-8150
He offered a L-4B amp on 6/26/98 for sale in the newsgroups in which he stated that the power supply was bad. Price was $300.00 plus shipping costs. A money order was obtained and sent to him via Priority mail . On 7/13/98 he wrote to me stating that his warehouse man dropped the amp " totaling it ". He further stated that he was sending back my payment. We'll after placing numerous phone calls with some having contact with him but most replies were "he's not in, with no return calls. The United States Federal Reserve Bank verified that the money orders were cashed on 7/2/98.... Still no refund.... Beware... Has anyone else purchased the same L4B form this character or any other BAD DEALINGS with him ???. ***BEWARE*** and Thanks. Rich AK2K

I've already seen Ken Starr's "Fishing Expediton" Starts with decades old
Whitewater land deal, ends up with consensual sex .... Subpoena's to a
bookstore, using illegally obtained tapes, attempts to subvert the
attorney-client privelege etc.

Like I said I'd much rather have a horny president in office than an out of
control NAZI prosector bouncing around like a loose cannon.

I'd do the SAME thing and advise ANYONE else to do so, Consensual sex between
two ADULTS is NONE of Ken Starr's nor the government's BUSINESS.

Oral sex or anal sex may very well be ILLEGAL in your state or communtiy , want
to testify about what you and your wife or girlfriend practice ?? Sex between
unmarried consenting adults may also be ILLEGAL in your area.

Agreed, and I think Clinton is brain-dead for his sexual adventures while in offie , I wouldn't try and get away with that if I were running for animal control officer in Podunk Iowa. But the actions of Ken Starr WRT to investigating consensual sex between consenting ADULTS (his "Fishing Expediton" sends a COLD shiver up my spine as far as "rights" go. With unrestrained loose cannonball prosecutors like Starr around our freedoms (if they want you bad enough) aren't much greater than those in Iraq, Libya, Afghanistan etc. .... _sigh_

```

1860. Need Help Making Call Sign CD

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-22 00:00:00 UTC
From: Hal <hal_hazel9m@ridgenet.net>
Message-ID: <6rndls$si0$1@ash.ridgecrest.ca.us>
Source record: 164075

Hello,

I would like to make a CD of the FCC callsign database. After downloading
all the ZIP files and unzipping them, I find they are all DAT files.

Is there an EXE program available that won't require a programmer to design
all the fields and links on relational databases?

Thanks.......Hal/KM6JM

1861. KUDOS to Small Wonder Labs and thanks to group

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-22 00:00:00 UTC
From: Rick Mintz <Rmintz@frontiernet.net>
Message-ID: <35DF3BF3.8BA89E03@frontiernet.net>
Source record: 164076

Hello Hamsters,

Wanted to send thanks to all those that offered useful information towards my purchase of my first QRP rig. Was looking
for a 20 meter phone kit.

Decided on a 'Small Wonder Labs', White Mountain model, 20 meter SSB kit. Also have ordered an Emtech ZM-2, 80-10 tuner.

Both will be mounted in a carved wooden box with a flip up lid. Should be an interesting project. Expect that I'll try
20 meter, QRP, SSB, Worked All States first. Maybe I'll even find the last three states toward my 5 Band WAS.

Mention must be made of Small Wonder Labs. Dave, NN1G shipped my kit upon receipt of my personal check (no 7-10 day
wait). I emailed him today since I wanted to add something to the order. Told him I would send another check. He is
shipping me the extra parts on Monday, BEFORE the check even gets there!

WOW!

The radio community deserves to know about this level of trust (especially towards a new customer). I believe that we
should all be true to our word (i.e. the check is in the mail) but in today's environment, NN1G, is to be commended.
Well, done Dave. Next time I look for a project, Small Wonder is the first place I'll look.

I expect my ICOM 765 to be lonely for a while.....

>Great if all you want to do is communicate while everything is perfect.

Or more importantly when things are *not* perfect. That's one of the
virtues of this sort of digital operation. It has infinite patience and
persistence. It will get the message through, even in cases where a
human modem emulator would give up due to exhaustion or frustration.

>It like the internet, there isn't really any "fun" using the internet or these
>news groups. Your computer does all the work and all your left to do is
>type.

Then what the hell are you doing here? You must find *some* value to
it, or you'd be off didahing instead. We aren't paying you for your pearls
of wisdom. Think about that. Reaching out and communicating ideas to
other people is what communications is all about.

>The fun is making a contact with you own skills and not rely on
>mechanical/electrical equipment to do the job for you.

Then get rid of those nasty electrical radios.

Amateur radio is a technical communications pursuit. If you want to
eschew technology, then go send smoke signals. But if you're willing
to embrace some technological aid, then why object to using the best
technology available to you?

Skills and knowledge are still required to take advantage of better
technologies. The skills and knowledge are partially the same, and

partially different. You still have to choose an appropriate frequency at an appropriate time in order to communicate. This requires knowledge of propagation and the operating habits of other amateurs. You still have to know how to setup and operate radio equipment, but you also have to know how to interface and operate a bit of digital equipment too. Instead of squeezing a set of paddles, you type on a keyboard. Both are mechanical motor skills, but the latter is more generally useful today. Etc.

One question you have to ask yourself is whether it is the medium or the message which is more important. If it is the latter, you'll use the best techniques possible to convey the message. If it is the former, then you don't really care if the message gets through our not. Ideally, amateur radio is a blend of medium and message. We care about how it works, but we also care about communicating what we want to say.

Just had a quick look along this thread. Yes Rich, you are mostly in agreement with each other. Semantics gets in the way of conveying info in written form. There's no body language.

I am not familiar with the rules and regulations governing the "hobby" on your side of the pond. To tell the truth I am not very familiar with the R's and R's on this side of the pond either. But the profit motive is behind ALL applications to become a radio amateur. Everyone hopes to GAIN from the effort one INVESTS in the hobby. Non-financial gain, of course, in 99.9% of the cases. But there's nothing wrong with combining business with pleasure and making an HONEST living out of it.

But as someone has already said or implied, an individual's motives should be, and nearly always are, entirely private. What we should worry about is the Government's motives in allowing and regulating the hobby. Regulation is obviously essential. But what are Governmental motives? If there's anything documented then it's usually so deliberately ambiguous and vague that I don't believe it. Do you? If Governmental motives should change for any political reason, due for example to the sexual habits of government ministers, prime or otherwise, or to the circulation statistics of newspapers, or to the popularity of TV so-called news programs, then we are in danger of losing our hobby. What guarantees do we have, with our CB associates, against being relegated to and dumped permanently on the Internet !

Whoever controls the World's means of communications also controls the Earth.

Regards, Reg, G4FGQ

Before I begin, I take exception to the title of this thread. I know several current and former ARRL BOD members and have met several others. In general, they are reasonable people trying to represent the views of the ARRL *members* as best they can. If you disagree with them (as I have on occasion), they want to hear about it. They may not do what you (or I) want, other members will have other ideas, but lack of attention is not a problem.

If you're NOT an ARRL member, too bad. If you have a well reasoned and well supported argument, they may well listen to you anyway. I've seen this happen many times.

>"Christopher Cox" <cobox@netexp.net> wrote:

<<<SNIP>>>

>>What is your logical reason for CW usage?
>>
>>Christopher Cox
>>KC8FRJ Amateur Amateur
>>NAR, TRA, RRS, ARRL, NCI, AMSAT, eieio....

Chris et. al.

As it turns out, the only "logical reason" for a CW requirement is a treaty to which the US is bound. The treaty requires a demonstration of morse code proficiency for access to Amateur HF spectrum. Changing this will require working through the US State Dept (NOT the FCC) and is likely to require a decade or more to complete.

The result of this is that, like it or not, we SHALL have a Morse code requirement of access to HF for the forseeable future. The current issue is to determine what the US means by "proficency" and enshrine that as part of the US Amateur license test.

That being said, the current set of test criteria places far too much emphasis on CW. However important Morse code has been historicly, today there are better (faster and more reliable) methods for reliable HF communications. The amateur exams should emphasize these techniques (among others) far more than they do now.

The morse code requirement should not be a "pass or fail" criteria any more than any other aspect of Amateur radio. The code speed requirement for access to Amateur HF spectrum (*any* license class) should be 7wpm and should count for no more than 20% of the total test score (70% being the minimum passing mark). Given a written test that is more relevant to

modern Amateur operation, a technically savvy applicant will be able
to get a license based on technical knowledge without using the code.
Those who aren't as technically adept, but have other valuable qualities,
can still get a license by concentrating on a somewhat different mix of
the skills and knowledge needed to operate an Amateur station.

Why 7 wpm? Several posters have suggested that the optimum speed for
very weak signal work, EME for example, is something like 5 wpm. My own
experience with EME (5 contacts) suggests that a somewhat faster speed is
closer to optimum (5 wpm is GLACIAL!!!). The ideal speed is somewhere
between 7 and 10 wpm, so I chose the bottom of this range. If the optimum
weak signal speed IS 5wpm, 7wpm will ensure compitance at the slower
speed. Also, I can just about write the dits & dahs down and translate at my
leisure at 5 wpm, but not at 7 wpm. The faster speed will ensure that the
code is really being interpreted and not being taken through an additional
translation step - in accordence with my idea of what constitutes minimal
"proficiency."

Start studying, any changes that MAY occure won't be for a long while.

>When was the
>last time the FCC updated the General class question pool ?

Just recently, the current NEW books are good until 2002 I believe.

> Also, Id
>like to hear some stories of how you all learnt morse code and your
>recommendations. Please Re: via email, the news server at my ISP doesnt
>work properly half the time..

I started with the "learning the morse code" tapes, available at Radio
shack. They got me to 7 wpm. I then used a program called Supermorse that has
got me to 10wpm to date. I'm stuck there at the moment. Getting on the air and
practicing seems to be the most recommended way to increase your speed fast.
I'd say don't wait for changes to the system, it's going to be a long wait
until something is done.

Maybe I'm missing something about Zyrian, but Zwieback or Zhitomir or
even Zapata (with [s]) would seem to be better for your purposes.

And in place of Nothing, how about Ndebele or Ngwee or Nkrumah?

For R, perhaps RNase or Rzeszow or at least Rwanda?

For S, maybe Sforzando or Sugar or Seller?

1890. Osama Big Loser to join this week's Liberty Net

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-22 00:00:00 UTC
From: hpm_1aw@my-dejanews.com
Message-ID: <6rlir9$ev6$1@nnrp1.dejanews.com>
Source record: 164105

This Saturday's Liberty Net will be joined by special guest Osama bin Laden, who is expected to discuss the topic :

"Why All American Satans Must Die the Fiery Hellfired Deaths of a Thousand Red Hot Suns and Burn Eternally in the Great Campfire of the Arab's Eternal Hatred and Retribution against their Satanic Imperial Infidel Attacks".

Joining the roundtable from Libya will be Mohammar Qaddafi, who has commandeered ham station 5A1A from the Europeans who think that by carousing on ham radio in a hostile fundamentalist Islamic country they will spread "international goodwill", as is ham radio's ITU/ UN/ Leftie mandate.

There will also be a rebroadcast of January 1991's Liberty Net featuring Saddam Hussein, who gave the speech :

"Why the American Imperialist Forces of Satan will find themselves in the Mother of all Battles, followed promptly by the Mother of all Surrenders of Iraqi soldiers wearing Very Wet, Very Stinky Pants".

97.1 lists 4 *purposes* of the amateur radio service. What motivates
individual amateurs to pursue any of those objectives is a matter
internal to that individual amateur. Each of us have our own internal
set of motivations for whatever we do. Those motivations are often
quite different from one individual to another. As long as an amateur's
actions further one or more of the purposes of the amateur radio
service, what motivates him to do so is not a matter of public
concern.

And when a person fears for the safety of another (who is being harmed
or killed) that is an emergency. Aren't the police paid to protect us?
And can't we contact them via "any method" possible?

> It was always my understanding that the FCC has regulations regarding public
> safety assigned frequencies and transmitting over police radios, that over
> ride any other regulation. I may be wrong, but my department has charged and
> received convictions on several occassions when someone transmitted over the

> they always confiscated the radio and let the FCC handle it from there. Now
> under what rules, I don't know but I've seen it happen.

If someone transmits a "false" message (mayday) they should be
prosecuted to the fullest extent. If someone happens to have a way to
contact their police, in a REAL emergency, why should they be penalized?

> Many may ask why under an emergency situation (and I'm not talking about a
> declared emergency where civilians are mobilized to assist in disasters) would
> the police care. Well it's like this. Many police buffs have radios that they

> suspect without the people in the target house knowing. Needless to say,
> things went really bad that night. Had the person called 9-1-1, the system
> would have alerted the dispatcher to the operation.

That's "one" incident you cited. Are there any more? Can you sit there
and judge what is going through a person's mind when they make such a
transmission.

And most 911 centers are extremely slow to help. I've had first hand
experience with them. The last three times I've used my cellular phone
to report actual "serious" crimes in progress, the 911 operators have
managed to fuck up the calls horribly, and the police officers never
arrived in time. I'm not suggesting that I should have used a two way
radio, but "911" messed up - bigtime.

> I have high respect for licensed ham operators and even CB operators. They do
> in disasters perform a valuable service. But a buff is a deadly person,
> licensed or not.

That depends on what you consider a "police buff." I am a free-lance
photographer, and own a Motorola HT-500, capable of transmitting on the
police channels. My transmit fuction is "disabled" and I use the radio
as a monitor only, due to the poor reception of scanners.

I spoke with one ham operator who's been doing this for over
> 65 years before I posted and he said that ham operators are not permitted to
> transmit on public safety frequencies. Now if only someone can get the FCC to
> post the specifics, I think it will clear everything up.

Well, as I said before, my transmit function is disabled, but if it was
functional, I would use it if I saw a "serious" crime. It would have to
be a "life/death" situation.

I can't imagine someone being prosecuted for calling in a bonafide,
serious, incident. It's bad enough that most citizens "look the other
way" when others are being harmed, but if we started to prosecute people
who used radios to save lives, we are in big trouble.

Some think we already are.

1898. AF2Y speaks Part 1 of 4.

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-22 00:00:00 UTC
From: w4nti@my-dejanews.com
Message-ID: <6rmdll$a1n$1@nnrp1.dejanews.com>
Source record: 164113

This is from Doc, AF2Y.

Part 1.

If I didn't know the REAL truth about the circumstances leading to TheLibNet article entitled " The Truth KV4FZ's Courageous Fight," I'd think that Herb Schoenbohm is a hero who was "setup" by politicos and then persecuted by the FCC. But I do know the truth and the article was a mere propangda, "pure" garbage designed to do to the reader what KV4FZ has been trying to do both on the air to hams and to the FCC's Administrative Law Judge, mislead and deceive.

Word has it that the article was penned by Marty Chittum W9XN. If so, then it's even more incongruous and contradictory because of the following on Sept. 13, 1993, in an attempt at ameliorating the FCC fine levied against K3CQR, Marty wrote to the FCC and stated the absolute truth with the following.

"Mr. Irwin wishes to bring to the Chief's attention some of the unusal circumstances surrounding this case so that it may be readily determined that Mr. Irwin's case deserves special consideration. For the past four years (perhaps longer) the amateur radio community has been plagued with vigilante terrorism under the guise of "self policing." This rule of terror has been brought about by an organization calling itself the Better Amateur Radio Federation. This group has set itself up as judge and jury over amateur radio, usurping and disdaining the authority of the FCC. The prime targets of the Better Amateur Radio Federation (known as the "BARF") have been the various amateur service networks such as the Maritime Mobile Service Network and the Intercontinental Network.

The Better Amateur Radio Federation has as its nominal leader one Herbert L. Schoenbohm, an expatriate convict residing in the American Virgin Islands. Mr. Schoenbohm has a long history of nefarious activities and has been a constant problem for the FCC over the past ten years. He was recently convicted on a federal charge associated with telephone toll fraud. The FCC has had numerous complaints on this individual including international complaints filed through diplomatic channels, while living under "Home Confinement" imposed by a Federal Court, he continued to direct activities of the BARF.

Under the guise of "self-policing," the BARF has attempted to curtail what it imagines to be "illegalities" using any method of which it can avail itself including breaking the very rules it claims to be upholding. This includes establishing communications on frequencies in close proximity to the nets for

the purpose of interfering with the nets. Criticizing and harassing net members, breaking into and interrupting net activities for "enforcement purposes" and the continual broadcasting of taped, public domain Amateur radio communications; excerpted, edited, and replayed in inaccurate and provocative manner. One of the BARF'S most insidious activities is its constant playing upon ethic issues and its promotion of ethnic hatred. The BARF describes net members as "Sanhedrins,"Kikes","Shylocks" and " arrogant Jews." The BARF maintains a policy of blatant anti-Semitism critical of everything concerning Israel, the Jewish community, the Jewish Faith, or individual amateurs who happen to be Jewish. The BARF's leader KV4FZ, calls the Jewish community, "the evil empire" and never misses an opportunity to downplay or dismiss the Holocaust as a "Jewish Hoax". I am personally acquainted with Marty's written skills, excellent to say the least, and am of the opinion the article extolling the virtues of KV4FZ was indeed Marty's who for inexplicable reasons has sold his soul to the devil while compromising his overall credibility. I've heard of being two-faced but this carries it to a new level.

Am I wrong in assuming that the aforementioned represents step one in the blowing to bits that dejanews article which was designed to touch the hearts of so many to garner support for the St. Croix hatemonger and to portray the FCC as a corrupted sinister agency led by gentlemen enamored with the Inquisition?

End of Part 1, of 4.

<snip closing>

Some of this discussion/argument has become matters of semantics. Your final comment is pretty much my main point. That's why I proposed that a Ham's motives should mesh with the official purposes of the Amateur Radio Service (my last posting, probably made after you wrote the above).

I can't (won't) individually reply to all the rebuttals I have received on this. I think it's got to the point where we may each be interpreting the others comments in the extreme. The one comment I *would* appreciate hearing with any rebuttal is whether or not the

writer's motives and activities as a Ham do or do not mesh with the official purposes of Ham radio. If they do, then this thread reminds me too much of a Monty Python movie, and I'm outta here.

Nonsense. The Technician license has traditionally been the fall back
position of those going for General but unable (for whatever reason)
to hack the 13 WPM Morse speed test. (Until recently, there was no
other difference between Tech and General testing.)

Part 2 of 4.

I couldn't help but notice the emphasis on Schoenbohm's deceased father's as well as Herbert's involvement in the Courage Center's Handi-Ham program. Based on what I now disclose, the elder Schoenbohm must be turning in his grave. Tom McMillian, WB3HGW, is a paraplegic gentleman who received his General as a result of a waiver regarding another illness preventing him for copying 13 wpm. Little discourage, humiliate and ridicule. Can you imagine telling a paraplegic to "stand on his own two feet like a man?" So much for Handi-Ham Herbie who contradicts rather than enhances the image of a great organization.

Next item for dispelling in that "truth Concerning KV4FZ's courages Fight" gibberish article is this business about a "conspiracy" between certain net advocates and the FCC. It's no more than Schoenbohm's way of saying his obnoxious behavoir. His rotteness, slander and agitation against nets and their advocates should have been tolerated and lovingly accepted instead of being opposed. In other words, Shooenbohm and his parasites can give it but cant take it. Thats to bad Herbie; you got and are getting exactly what you deserve and probably there is more to come. Perhaps your adherents honestly think your "enforcement procedures" are legit, including defamation. Yes, there are suckers born every minute but nonetheless keep in mind there are plenty of GOOD people out there in radioland that recognize bums behind malignant microphones and are determined to act.

Indeed there have been many letters sent to the FCC about KV4FZ and hopefully some have hit the bullseye but keep in mind that letters of protest comprise no conspiracy whatsoever. They represent free expression in a free society and the only way to counter the maniacal rantings and ravings of a power seeking lunatic like Herb Schoenbohm is by such free expression of revulsion, disdain and loathing. Incidently there's much said about a convicted felon named Art Candell N4PCK. KV4FZ and his parasites harp on the fact that intercon supports such filth. That's no more than propaganda. Candell is slime and I know of no net member who things OTHERWISE. PERIOD!

The article alludes to unjust actions by the Caribbean Automated Long Lines System (CALLS) against Herb, Unjust? Hell the man was stealing services from it? In Herb's mind, no one, not a net member nor an individual ham or an executive of a phone company has the right to retaliate against naked agression. KV4FZ must be living in his own dream world. The man is guilty of megalomania. He's a legend in ths own mind. Infallible. The truth? he's a thief who was caught; that's all there is to it.

In the original files Carmen Carrillo, fraud investigator for CALLS, dated 7/7/88 we clearly read on page one the times and dates of phone service theft

listed officially as FRAUD and RELATED ACTIVITY in connection with ACCESS DEVISES (Title 18, USC Section 1029; Conspiracy to Commit fraud and related ion with access). And whom were those under scrutiny by? (1) the United States Secret Service. (2) The St. Thomas Police Department, detective Division and (3) Calls Security Personal? Both Herb and wife Monika Schoenbohm. A family affair, so to speak. The reporter's synopsis states. "investigation revealed that Herbert Schoenbohm using a computer program and/ or related methods designed to infiltrate telephone systems, knowlingly and with intent to defraud, produced, possessed, and used and trafficked in on or more counterfeit access devices (codes) generated through personal use fraudulent telephone calls valued at_____." Continued investigation revealed that Monika Schoenbohm used one counterfeit acces device (code), which was also used by Herbert Schoenbohm to generate at least one fradulent telephone call, therefore verifying that Herbert and Monika Schoenbohm conspired to defraud CALLS and legitimate customers of long distance service.

END PART 2 of 4.

So would most of us. But only those ignorant of the law will then claim it was lawful. The rest of us will only assert that it was necessary, which is a claim merely of mitigation and not of innocence.

> I can't imagine someone being prosecuted for calling in a bonafide,

Go back a tad further and 5 WPM did the same, and that's when there was
nothing else but Morse available to the typical amateur. Today there are a
multitude of choices of mode and code, but instead of reducing the importance
of Morse to amateur licensing, the current structure (since 1968) has increased
it. Illogical.

Hmm, then I suppose those weak signal and EME types aren't really
communicating when they use Morse at the speed where it can be
decoded by ear at the lowest SNR.

That's not a *logical* reason, it is an *arbitrary* reason. And S25.5 is on
the agenda for WRC2000 (though it may be pushed back to 2001 due to
the press of more important issues before the ITU).

>The result of this is that, like it or not, we SHALL have a Morse code

>emphasis on CW. However important Morse code has been historicly,
>today there are better (faster and more reliable) methods for reliable HF
>communications. The amateur exams should emphasize these techniques
>(among others) far more than they do now.

If we take the view that testing should be used as a method to herd amateurs
in the direction of certain operating techniques, what you say has merit. There
are certainly better techniques than Morse now widely available, and likely to
become much more widely employed if emphasized in the testing system. That's
certainly been the claim for Morse testing.

But we need to ask ourselves if the proper role of testing is for it to act as
a recruitment tool to any particular operating mode. I don't think that it is.
I think that's a choice best left up to the individual amateur based on his
particular interests. Testing should concern itself only with the things every
amateur must know in order to operate without causing harm to others
(particularly others in more critical radio services like life safety, but also to
the general public, or to other amateurs), or to himself. Maintaining public
safety and order is the primary responsibility of government. In other matters,

individuals should retain freedom of choice and action without arbitrary pressures or herding from government bureaucracy.

1916. AF2Y speaks Part 3 or 4

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-22 00:00:00 UTC
From: w4nti@my-dejanews.com
Message-ID: <6rmk1cgvl1@nnrp1.dejanews.com>
Source record: 164131
Cross-posted to: dejanews.members.test.n4lmc.kv4fz-and-truth,rec.radio.amateur.misc

And so what happened? It seems that Herbie cut a deal with the Secret Service to leave Monika alone and KV4FZ stands trial alone. The outcome? Remember that KV4FZ started the BARF organization to STOP THE ALLEGED MISUSE OF TELEPHONE PATCHING PRIVILEGES BY MEMBERS OF SERVICE NETS. On Dec 30,1992 after being found guilty of three interrelated charges of which two were later dropped, KV4FZ was sentenced to two months in jail. But Judge Thompson showed sympaty by substituing two months of house confinement (arrest), two years probation and a five thousand dollar fine for jail time. KV4FZ was now a felon who had to pay his debt to society.

Herb's crime was one involving telecommunications and guess who oversees telecommunications? Right, the Federal Communications Commission had both commercial and ham licenses authorized by that agency, the agency wanted to make sure that Herbie possessed the requisite qualifications to retain them through RENEWAL, Can you blame the FCC? They weren't "out to get Herbie", as alleged. Why if Herbie had presented himself candidly, honestly dignified mounting problems he now counters. But you see Herbie tried to pull on them what he's been pulling on ham radio for God knows how long- the scam, THE BIG LIE ect. He thought that Administrative Law Judge Edward Lutton was named Judge "Quennie" That's an inside joke, friends.

Okay, now let's put everything in order but it's not going to be easy. To begin with, before we go into a discussion regarding Herb vis a vis the FCC, it's interesting to note that KV4FZ refused to buy the fact that he still was standing guilty on count one; fradulent use of a counterfeit access device. And so he appealed to U.S. Third Circuit Court of Appeals, but to no avail. On July 22, 1994, the conviction was upheld. But Herbie wouldn't hear of it so he petitioned for a rehearing which was turned down on Nov. 2, 1994. But Herbie wouldn't hear buy this one either so he filed a motion to vacate for a writ of certiorari and this too was turned down on Nov. 4, 1996. By now you'd think a normal man would accept his guilt and subsequent punishment, not our boy Herbie Schoenbohm.

Wow, did he make one hell of a mistake. It happened on April 3, 1995 and right on 20 meter phone. He was in contact with "Mac" Swan, AB4PW to discuss how someone, not "Mac", could CONTACT Herbie's friend in Congress, Delegate Victor Frazer, to suggest political intervention regarding the hoped-for renewal of his licenses. This solicitation was taped by a gentleman long targeted by KV4FZ, a Hugh LaBlanc, W4BOZ, who had been in ham radio public service for close to sixty years.

What Herbie did was a gigantic NO-NO. It's deemed an "ex-parte" violation which ticked off the FCC to the Nth degree. Alright, to get back on track, here goes. KV4FZ applied for a reneway on 2/2/94, one month before the

expiration date on 2/2/95 the Wireless Telecommunications Bureau "suggested" that Herbi be questioned at a hearing in D.C. And so our man goes off to Washington to prove that he's qualified to renew his amateur service or encouraging others to make a presentation that he was prohibited from making(ex parte); to prove that if he indeed violated "ex parte," it wouldn't be effective enough to disqualify him from renewal and to prove that his relicensure would serve the public interest, convenience and necessity.

1918. AF2Y speaks Part 4 of 4

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-22 00:00:00 UTC
From: w4nti@my-dejanews.com
Message-ID: <6rmlio$j2l$1@nnrp1.dejanews.com>
Source record: 164133
Cross-posted to: dejanews.members.test.n4lmc.kv4fz-and-truth,rec.radio.amateur.misc

Part 4 of 4.

So Herb gets all spiffed up in that Pan Am jacket and appears at hearing number one on 8/8/95. After listening to Herbie's tale of woe, Judge Edward Luton sends our man packing by denying renewal application on 2/2/96. Herbie once again refuses to accede to law by having his lawyer, Lauren Colby file exceptions to the decision. He sought a remand hearing to provide evidence regarding these additional issues: (1) to determine whether Herb made misrepresentations or lacked candor in his testimony about his felony conviction, loss of pension rights, and ex parte communications (2) to determine if Herbert used his amateur radio facilities for communications about how to obtain illicit access codes. The remand hearing took place on April 1, 1997.

Before Judge Luton, the FCC attorneys argued that Schoenbohm intentionally tried to soften his telecommunications crime. Lie number one, He lied about facts pertaining to loss of pension rights as a result of being fired by the Police Department. He lied about his accomplishments as Chairman of the State Emergency Communications Committee for the Virgin Islands. He lied about his version of not truly understanding the ex parte rules. The FCC attorneys were wondering why, in light of Schoenbohm's glorification of his own self in the Virgin Islands, he couldn't supply one character witness at hearings. Lies on top of lie non-stop bull throwing. Although Herb emphasized that other hams who had committed much more serious crimes than he had been renewed which is indeed correct, he failed to realize that the FCC puts more emphasis into the CREDIBILITY of the felon i.e. his propensity to deal TRUTHFULLY with the Commission than into the seriousness of the crime. And so to put it bluntly, Judge Luton's opinion, in very professional terminology, said that KV4FZ CANNOT BE TRUSTED to abide by FCC law and therefore will not have his licenses renewed. Naturally, as expected, Herbie is doing all he can to drag out the inevitability of a FINAL cease and desist order while attempting through subterfuge, deceit and lies, to convince "hamdom" that in reality he's amateur radio's version of Mary poppins whose umbrella is being perforated by a mean ugly agency of a mean ugly government.

The beat goes on. Listen in to either 14.313 or 14.300 depending on what frequency Shoenbohm or his thugs run off Intercon and you'll hear the begging for Schoenbohm Defense Funds by his cretins Bob Youngblood, KT4TR, and "Polly" Ashley, W4FQF. Are they just STUPID, GULLIBLE or SIMPLY UNABLE TO SEPERATE RIGHT FROM WRONG? Does anyone really know for sure?

AF2Y

The Liberty Net might like to know that...

A Martha's Vineyard bookstore sent the Precedent and the Worst Family these titles to read on vacation

"Fall from Grace"
"Hullabaloo"
"A Walk in the Woods"

Ironic, isn't it ?

I assume you are refering to the PRC-25 series. They operated from 30-75
MHz. FM Mode, channelized, coded squelch of 150 cycles

Is that intended to silence those that object. This is America
the last time I checked. One is both entitled to their opinion
AND entitled to participate in the process of changing those
requirements we don't want.

Cheers,
Bill K2UNK

Talk to AOL about it. It's their system that's messing up.

If you knew anything at all about AOL, you'd realize that it's impossible for someone to purposely post the same message twice without cutting and pasting.

"Where's that big 'ol CB RAMBO??"

It's too cold-hearted to just stand by and watch someone in trouble.
If you're able to help someone in need but you fail to do so, you're
a coward.

I once chased a purse-snatcher 3/4 of a mile (down the Ala Wai Canal,
then onto Kalakaua Avenue into Waikiki) and cornered him; someone else
helped me to subdue the crook until HPD arrived. If I would have
had my HT with me I would have used it to whack the bad guy over
the head a few times.

(fol-ups directed to only alt.law-enforcement)

SB DX @ WW $OPDX.371
Ohio/Penn DX Bulletin No. 371

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 371
BID: $OPDX.371
August 24, 1998
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, K1XN & The GOLIST, WB2RAJ/WB2YQH & The 59(9) DXReport, KH2D, W3HNK, K4RB, WX5L, N6HR, K8NA, DF4RD, DJ5AV & DX News Letter, EA3BT, EA3AOK, ER1AA, F2CW, G4BUE & DX News Sheet, GM4FDM, IK2XDE, ON5NT, PY1KS, PS7AB, RA1QHJ, SV7CLI, VE3ZZ and ZS5BBO for the following DX information.

3W, VIETNAM. Peter, 3W6EA, has informed several people that he is restricted to the following frequencies (using only a maximum 500 watts): 14160, 14260 and 21160 kHz. His activity has been mainly around 1500 to 1630z, but he has been heard as early as 1245z. QSL to: P.O. Box 121, Ho Chi Minn City, Vietnam.
Meanwhile, the "DX News Sheet" reports that Mirek, VK3DXI, will be active from August 29th through September 4th as 3W6DXI. Activity will be mostly CW. QSL via DL4DBR.

9V, SINGAPORE. "The 59(9) DXReport" states Mirek, VK3DXI, will start his next multi-year assignment here in October and hopes to regain his 9V1XE callsign.

AFRICAN ACTIVITY (5X, 5Z4 and E3). Jacky, F2CW/ZL3CW, is currently in Africa for a 4 month mission. He is based is Kenya where he is expecting a callsign, but it may take several weeks ("If not months!", he states.) Jacky reports to OPDX that he is currently in Uganda for a few weeks. He has already applied for a callsign which normally takes a week (if he is lucky it will be 5X2CW). So look for him to be active soon. Probably the most exciting news is that Jacky will be going to Eritrea soon, but he doesn't know yet if it will be possible to obtain a license there. "I will try!!!", states Jacky. QSLs will be via ZL3CW, Jacky Calvo, PO Box 593, Pukekohe 1800, New Zealand.

BV9P, PRATAS ISLAND. Randy, WX5L, reports that during the New Orleans International DX Convention, Paul, BV4FH, who was a member of the last trip to Pratis Island, explained how difficult it has been to obtain

proper authorization to return to this highly sensitive island. He went on to say that they are very close to getting the "OK" to return sometime between 30 and 60 days. BUT, he needs our help. Paul needs input from the DX community to accompany his final push in a few weeks. He is requesting E-mail's to be sent with a short message indicating our desire and needs for Pratas Island to be activated. If you need it for an all time new one, mention that, if you need it for 5B DXCC, mention that or whatever. Each message received, Paul will make a hardcopy of it and submit it as a package to show evidence of the needs and desires of the DX community to the governing authority. He feels that good representation will be the culmanating ingredient for approval so that the 10 member team can accomplish their goal possibly as soon as October. He did mention as soon as approval is granted, it could happen very fast as they would be flown in on C-130's as soon as the team can be assembled. Let's give Paul the help he needs to make the Pratas Island DXpedition a reality. Pauls E-mail address is: bv4fh@ms2.hinet.net

C2 NAURU. Look for Jack, VK2GJH, who will once again be active from here between August 26th and September 5th as C21JH. Activity will be on 80-6 meters, but mainly on the WARC bands. QSL only direct to: Jack Harden, Box 99, Ryde, NSW 1680, Australia.

C56, THE GAMBIA. Members of the Bavarian Contest Club (BCC) are organizing a DXpedition here in October, 1998, which includes the participation in the CQWW DX SSB Contest. The Team consists of: DF4RD/Dieter, DL5NAM/Chris, DL8UD/Uwe, DL9NDS/Uwe, OE2VEL/Wolf and OE9MON/Karl. They will depart on October 14th, and will stay until October 27th. There will be activity on all bands (including 6 meters, if they get the permission) before and after the Contest on SSB and CW. There is a possibility of participation in the WAG-Contest (October 17-18th). More details will be forthcoming (callsign, QSL info, etc.) as soon as possible. Meanwhile, check out the BCC Web page at: http://www.uni-erlangen.de/~unrz45/BCC

DO YOU NEED ZS3? Edwin, ZS5BBO, reports to OPDX that he has received a number of requests regarding activity from the ZS3 area in South Africa. He states, " There are few hams in this area, let alone serious DXers." Edwin wants to know if there is a serious demand for contacts from this call area, and if so, he will consider going to this area in December, 1998. At this stage this is just a survey, but he would appreciate any feedback regarding this matter. His E-mail address is: zs5bbo@icon.co.za

ER27, MOLDOVA. Now until August 31st, look for the special callsign ER27A to be active in commemoration of "Independence Day" for the Republic of Moldova. QSL via ER1DA: Valery Metaxa, P.O.B. 9537, Kishinev MD-2071, MOLDOVA.

FM, MARTINIQUE. Nuria/EA3AOK and Josep/EA3BT have announced that they will be active from here, October 20-26th, as FM/EA3AOK/P and FM/EA3BT/P. Their activity will be mainly on SSB and RTTY, with some CW, with operations on 80-10 meters, including the WARC bands. They will take part in the CQWW DX SSB Contest with the special callsign TO8B. All the QSLs will go via EA3BT. For more up-to-date details, check out their Web page:

http://www.redestb.es/personal/j_gibert

FT5X, KERGUELEN ISLAND. This will be the last week to work Helios, F6IHY, as FT5XN because he will be leaving the island on August 28th. Activity seems to be around 1100 and 1200z. Check 14165, 14190, 14260 and 21267 kHz. Also, check 10103 kHz around 1400z. QSL via F6PEN.

H40, TEMOTU PROVINCE (Added to DXCC List). If you are not an InterNet Subscriber to the OPDX, you missed the announcement that the ARRL Awards Committee has accepted a recommendation by the ARRL DX Advisory Committee to add the Temotu Province of the Solomon Islands to the DXCC List. The addition will be effective with contacts made beginning 2359z on March 31, 1998, and after. The DXCC Desk will accept QSL cards for Temotu Province (H40) beginning October 1, 1998. QSL cards received before that time will be returned without action. Temotu Province includes the Santa Cruz, Reef, Duff and Vanikolo Island groups.

KH2, GUAM (Top band). It has now been reported that Gus, K4SXT/KH2, and Dave, N2NL/KH2, are now both active on 160 meters from Guam. Both were heard around 1000z, one on 1828 kHz and the other on 1831 kHz. QSL N2NL/KH2 to W2YC.

KH0/KH2 UPCOMING ACTIVITY. The Mariana Islands DX Association members have announced that they will be making an effort to supply as many Guam and Saipan multipliers as possible in the VK/ZL Oceania DX Contests on October 3rd and 4th (SSB), and October 10th and 11th (CW). Activity will be on 10/15/20/40/80 meters on both CW and SSB weekends. Active stations from Guam will be KH2D, N2NL/KH2, NH6D/KH2, K4SXT/KH2, WH2U, KH2JU, N4UQM/KH2 and NH2E. Active stations from Saipan will be WH0AAV, KH0CE, AH0D, NH0F, NH0D and NH0E. QSL info for MIDXA members can be found on the club web pages at http://www.guam.net/pub/midxa/

PROJECT DX TEAM (Italian Island Activity). Members of the A.R.I. Lomazzo (Co), Italy plan to activate four different islands this week. The operators are: I2OGV/Giovanni, I2RFJ/Ivano, IK2JYT/ Giovanni, IK2XDE/Andrea, IK2XDF/Giampaolo and IK2XNW/Luca. Their activity will be on SSB and CW, and if is possible also on RTTY. Look for them to be on: Bacucco Island (IIA RO-04) August 25th; Piallazza Island (IIA FE-01 and IOTA EU-155) August 26-27th; Baron Island (IIA FE-03 and IOTA EU-155) August 28-29th and Scannone di Goro (IIA FE-05) August 30t. QSL all operators via the QSL Manager IK2XDE (Bureau or direct to: Andrea, P.O. Box 3, I-22072 Cermenate (Co), ITALY

QSL INFO AND NEWS.....
Hillar, N6HR, reports that the TF3IRA QSLs for the IARU 98 HF Championship have been received from the printer, and ALL QSOs will be QSLd unsolicited via respective bureaus. "Check out the c-o-l-d Vatnajakoll icebergs coming down from the glacier!", says Hillar. QSLs will go out week of August 24th.

K8NA is now the QSL Manager for Tim, NO7F/KL7, activity from Fox Island (IOTA NA-059), Alaskan island group.

The DXpedition by Nick, RA1QQ/1, from the Arctic Islands (in the European part of Russia) has ended. Nick visited 3 islands: Kildin Island (EU-082), Korga Island (EU-160), and Kharlov Islan (EU-161). Around 3000 QSOs were put in the log (1040 QSOs were made in during the IOTA Contest). Nick was alone in this expedition, and his financial expenses increased. After solving all financial problems, all QSL cards will be printed and sent out.

The QSL Manager for the special event station J47LHA, which was operating during the Lighthouse/Lightship Activity Weekend, is SV7CO: PO BOX 46, 68100 Alexandroupolis, Hellas-Greece.

ADDRESS CHANGE. Padelis, SV5AZ, QSL Manager for J54RDS and SV5RDS (the Dodecanese Radio Amateur Association on Rhodes Island) has changed. His mailing address and his new address is: Padelis Vassiliadis, P.O. Box 329, GR 85100 Rhodos, Greece

AP2TJ via W3HNK. Joe, W3HNK, request PLEASE use a #10 business size SASE or a 6 1/2 x 4 3/4 European size SASE as his card is HUGE!

S0, WESTERN SAHARA (Update). QSL Manager Ghis, ON5NT, reports Mark, ON4WW, will be touring again through the Western Sahara. He will be active again as S07WW from August 25th until September 1st. As this is a working trip for Mark, most of his operation will be during the local evening and night hours. He will give updates on his low band skeds while there. Mark also now holds a 5T5WW callsign and will likely be active from Mauritania while passing through. He will not stay overnight there (5T), so this could be a local daytime operation. The date August 26th was mentioned. QSL via ON5NT.

SPECIAL EVENT. Look for special event station EK88L to be active now until August 31st, and again for one week in December. This is to commemorate the victims of the 1988 earthquake that destroyed the town of Leininakan (now called Gyumri). QSL via IK2DUW.

TZ, MALI. Bob, K4RB, reports to OPDX that he is in Bamako and has just received his TZ6DX license. He plans to be on CW/SSB on 40-10 meters including the WARC bands. He was heard this past weekend on 15 and 17 meters, on CW, 18079 kHz at 1800z and 21010 kHz at 1415z, and on SSB, 21331 kHz at 1900z. QSL via K4DX if a Georgia address, otherwise the old callsign of WA4FVT. Bob states, "Nice to be back on the air after a year off and find all these vastly improved condx!"

USI AND IOTA ALERT. Gregg, VE3ZZ, will be active from Hilton Head Island, S.C. as VE3ZZ/W4 (NA-110 and USI: SC-002S) from August 29th through September 12th. He will be looking particularly for Europe stations on the normal IOTA frequencies. QSL to VE3ZZ via Bureau or direct to: PO Box 1345, Ottawa, Ontario K1P 5R4, CANADA.
Also, just a reminder that Eddy, VE3CUI, will be active from Ocracoke Island (NA-067), North Carolina, USA, for one week, commencing on or about August 23rd. Activity will be mainly on CW, especially on 40 meters on 7040 kHz (on 80-10-meters, the usual IOTA frequencies). His callsign will be VE3XZ/W4. QSL via VE3CUI (bureau).

V3, BELIZE. Just a quick reminder to look for W5JYK, K5KR and W5ZPA to be active this week from Ambergris Caye (NA-073) signing V31YK, V31KR and V31MP (Refer to OPDX.357). Activity will start August 26th and last until the 30th. Look for them on CW/SSB/RTTY with operations on 80-10 meters. QSL via homecalls.

ZW4, BRAZIL. Marcus/PY4SM, Pedro/PY4TF, Arthur/PY4ART and Ailton/PY4ACL will be on the air as ZW4SM from September 4-6th, in celebration of the 176th anniversary of the "Independence of Brazil". They will be operating on the following suggested frequencies:
CW - 3507, 7007, 14007, 21007, 28007 and 50110 kHz
SSB - 3777, 7077, 14177, 21177, 28477 and 50110 kHz
QSL via the Bureau or via PY4SM - P.O. Box 120, Belo Horizonte - MG, 30.123-970, Brazil

1938. TS-450SAT AutoTuner Problem

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-23 00:00:00 UTC
From: Don Lafontaine <lafont02@cn.ca>
Message-ID: <35E09325.36BE7D7A@cn.ca>
Source record: 163896

Hi, I wonder if somebody would have any ideas for me.

The Auto Tuner on my 450 suddenly gave up the ghost.

Here's what I can tell you.

1 - The tune light goes on, and it switches to transmit mode but the tuner does not activate.

2 - I checked for power to the motors, and there is none. The relay on the tuner module appears to work.

3 - I checked all the connection to the module, everything appears to be in order.

4 - I did a hard reset of the CPU, no go.

I'm outta ideas, any techs out there that can help me out?

Thanks in advance,

Don Lafontaine

Ernie, I have a nice Ten Tec Corsair II HF tranceiver for sale. It works 100% and comes with the manual. It was just recently reworked by Ten Tec and sounds great. On a 1 to 10 scale this one is 9.8 Would you be interested in a trade. The value of the radio is around $750 so I would expect $200 cash difference. Same rules as you listed below for the transaction.

I need some help for a friend. He just picked up a FT-73r, and wanted to mod
it so that he could listen to his businesses freq but not x-mit on it. However, the
radio dosen't work much outside of it's designed limits. RX drops off pretty fast. He
says that there's a pot inside that'll widen the radio's RX and TX up. But without
the service manual, figuring out which it is isn't easy. Can anyone help him out?
He dosen't have internet access, nor even a home computer, so I'll relay
messages for him.
P.S., if you think he's doing this to mess around with other freqs, he's most
definately not. He's 67, and he's a Vet who strongly believes in not breaking the
law. I've known him long anough to know that he's straignt. Besides, as a precaution,
he's going to set the Tx freq to something so far out of band that TX power will be 0
watts. With this ht, that's easy.

Yeah, it must really go up your backside when all us "barbarians"
shun your high-tek, high-cost, high-equipment-need so-called
'modes of the future' for a mode that is simple, is easy, and
requires nothing special sans a radio to operate.

But, you Mr. Peabody types still haven't gotten it. Maybe some day.
Doubtful, though.

No body language. No inflection in the voice. Disjointed
communication.

I generally avoid policy-type discussions like this on the Net. They're
awkward, and in this case, they belong in a different newsgroup. [Even
"free speech" has a preferred forum sometimes, and some topics are out
of place in some forums.]

> I am not familiar with the rules and regulations governing the "hobby" on

In a very broad sense, I agree. With skillful semantic haggling,
however, one could make you sound like a real ogre for writing that.
;-)

> But as someone has already said or implied, an individual's motives should

> that I don't believe it. Do you?

Sometimes I do; sometimes I don't. For the most part I disagree with
you here, but the situation may be different on this side of the pond.
Looking at the Amateur Radio Service regulations and the laws and
regulations pertaining to radio as a whole, I find the government's
motives to be reasonably clear and plainly stated. And they're easy to
find nowadays. Much of the regs and the preliminary considerations
(published in the Federal Register) are available on the Net.

> If Governmental motives should change for
> any political reason, due for example to the sexual habits of government

> newspapers, or to the popularity of TV so-called news programs, then we are

> in danger of losing our hobby. What guarantees do we have, with our CB
> associates, against being relegated to and dumped permanently on the
> Internet !

There's a balance to be achieved here that is tough to come by.
Sometimes things change willy-nilly (as you note), but sometimes
much-needed changes seem to plod along. Change here seems to be more
like a pendulum swinging between extremes than something steadily
progressing toward balance. Some say we have to expect that in
democratic systems.

> Whoever controls the World's means of communications also controls the
> Earth.
>
> Regards, Reg, G4FGQ

As per Goebbels, Stalin, and other "great" world figures. Fortunately,
I don't think we're at that point.

Typical thinking of those who wish ham radio to remain their own little private fraternity, complete with Morse hazing ritual. Guess what? Doesn't work that way when your "fraternity" uses publicly-owned radio spectrum. Keep it up and soon neither you nor anyone else will have a place to use your HTs. The bands will have been converted to commercial use, complete with digital technology so the new (PAYING) users will not be bothered by the few remaining hams who will attempt to operate illegally on their new band allocations.

Hi, I am selling my 6 month old FT-2500M radio so I can purshase a
FT-100 (HF-70cm) radio for the car. The radio is in excellent condition.
I will leave my voicemail
at work and return calls in the evening at the Hotel. I will be able to
send out the radio next Saturday. I paid $270 for the radio but there
maybe coupons now etc.
So please make a fair offer for the radio. I will pay shipping etc. I
live in Boston, Massachusetts but will be in Chicago on business next
week.

>Wanted to send thanks to all those that offered useful information towards
my purchase of my first QRP rig. Was looking
>for a 20 meter phone kit.

How many times do I have to read messages from hams that send a
"Thank You" addressed to ALL. When one seeks help and
someone takes the time to respond, the least the receiver of
help can do is send a simple individual reply for thanks. After
all-the respondents to this call for help responded one by one.
I have received up to 75 messages in a call for help and sent
individual thanks to each. It was very time consuming, but it
was the right thing to do.

Would you at your wedding, if you were the groom, get up at the
end of the reception and yell out, "Gee, Thanks everyone for the
gifts?"
If you are a T Y P I C A L ham--absolutely.

It is unlikely you will respond to this if you did not even bother to
respond to someone who H E L P E D you

Burt.

Burt I realize this is one of your typical trolls. I must say that
your logic is ludicrous. Any normal person would be concerned about
the health and property welfare of his immediate family in the face
of a possible natural disaster. This NORMAL concern for ones family
in no possible way implies a lack of concern for ones neighbor,
whether this neighbor is across the street, or across the world.

I'll try again to make my point, Vietnam Dan. Put down the 40-ouncer of Welfare Beer and pay attention:

You made note of the fact that AF2Y was not on the Internet and therefore, you were posting his anti-Herbie propaganda on his behalf. My question is: since AF2Y is not even a participant on USENET, what purpose is there by bringing this ongoing feud onto this newsgroup...other than to cause agitation and harassment, both of which you excel at.

1973. Happy with the new Comet CA-HV antenna

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-23 00:00:00 UTC
From: Ed Kriston <n3wja@toad.net>
Message-ID: <MrYD1.1186$Nk2.14695745@news-read1.qis.net>
Source record: 163959

Just thought I would drop a note with my impressions of the new Comet CA-HV multi band antenna (2,6,10,15 ,40 the 20 meter coil is optional). It does do 2, 6, 10, 15, 20 and 40 meters. Most amazing thing to me is that it was dead on the Novice bands when assembled. Assembly doesn't take much. Runs 2 and 6 meters continuously and any two of the HF bands at the same time. If you are running the 40 meter coil, it needs to go on top (vertical). Performance has been good for me, I spend a lot of time in my vehicle. I am using the Diamond K400C mount on my vehicle at the driver's side of the engine hood. The vehicle has a soft top and sunroof which makes mounting antennas interesting. BTW, both Comet and Diamond suggest heavy duty mounts for their antennas. It is by no means a wimp when it comes to wind load running down the road.
A friend purchased the Diamond MV-3A and had trouble getting it resonant on a usable part of the 6m band. When he called Diamond tech he found out that there was a kit that would make it resonant on 6, which it claims to do, and charged him for it. The other problem for me was that all of the HF band resonator coils were extra, except 10m. If you purchased all the coils, you were looking at almost $200. The Comet comes with those mentioned above and with the 20m coil it would be about $170.
First thought when looking at them is that the MV-3A does 2, 6 and 10 meters out of the box for $84.95, good deal. When you add in the other resonators it doesn't come out that way. The Comet CA-HV with the 2, 6, 10, 15 and 40 sells for around $130 and the 20m coil for around $35. BTW, they do look an awful lot alike. Diamond has a shorter base coil and 10m resonator coil but still needs a heavy duty mount.
I am happy with mine, thought I would pass it on. 73 de N3WJA

1974. Re: TS870s

Unusual problem. Not sure why, but here's your mod:
(not mine, just passed along)

Subject: TS870 MARS/CAP Modification
From: Howard Ryder <W4NTW@ix.netcom.com>

TS870.mod
Here is your chance to prove how adept you are at microsurgery.
This mod will enable the TS-870S to transmit on MARS, CAP and other
frequencies.

1. REMOVE TOP AND BOTTOM COVERS.
2. REMOVE THE TOP SCREW FROM EACH SIDE OF THE FRONT PANEL
ASSEMBLY.
3. CAREFULLY ROTATE THE FRONT PANEL FORWARD TO GAIN ACCESS TO THE
CONTROL BOARD(X53-3560-11 A/4). THIS BOARD IS MOUNTED VERTICALLY
AGAINST THE BODY OF THE TRANSCEIVER. IT IS NOT THE BOARD THAT
IS MOUNTED IN THE FRONT PANEL ASSEMBLY.
4. LOCATE AND REMOVE RESISTOR R244 FROM THE CONTROL BOARD. R244 is below
IC12 ROM and above IC23. There are two chip resistors, one on
top of the other -carefully remove or break the top one..it is easily
fractured -that's R244.
5. REASSEMBLE AND THEN PERFORM THE CPU RESET BY HOLDING THE A=B
BUTTON DEPRESSED AS POWER IS TURNED ON.

IT WORKS!!

You mean unlike yourself?

> I'll bet they have! I would wager that W4NTI

You'd lose, dipshit.

>advised you to take your stinking club foot out of your sperm-laden throat.

You're projecting again, Pee Wee. Those homo LAMES are

>So, prove to us that someone was considerate enough to privately inform you
>not to make such idiotic statements. Tell us, what is the primary purpose of
>cutting an antenna to a resonance length

To produce optimum operation, stupid. The impedences should match, otherwise it degrades the overall performance of the antenna efficiency. or, if the antenna is constructed such that circulating current induced by a passing wave stays in phase with later instances of current induced by the same signal, then the antenna is resonant.

>and why is anyone "stupid" who does not cut an antenna to a resonant length?

Well, if you had a ham license, you wouldn't have to ask a "Technician" these questions. O'Brainless bribed somebody for his licence, obviously. Sure, use a random length antenna for multiband operation, but make sure you use that impedence-matching network. The only disadvantage is you might get too much RF in the shack, which must've happened at yours. Anything else, lardass?
1/2 wave dipole antenna formula 468/F in Mhz.

>now, W4NTI has probably attempted to illuminate Ms. Wiseman's 15 watt dummy
>load light-bulb. Talk about a "green newbie" lacking the common sense to
>shut-up and learn something... that's KC8JBO!]

Says the "know-it-all" Libnet. Who, by the way, doesn't have the balls to post his callsign.

>I'll take you up on your bet, Ms. Wiseman. I'll wager a $10.00 Domino's gift
>certificate that you WILL NOT pass the general class amateur radio license
>exams on or before October 1, 1998. No code waivers allowed due to "Picket
>Fence Epilepsy". We have already heard all about that scam.

Sure, fatass. Here's a question from the exam:

If the free-space far-field strength od a 10 Mhz dipole antenna measures 1.0 mv/meter at a distance of 5 wavelengths, what will the field strength measure at a distance of 10 wavelengths?

Now let's see _your_ answer, fatboy.

> If you win, it will be the best meal you've ever had.

You've obviously never could afford a vacation trip to Europe. Since you're just a minimum -wage pizza delivery boy the only thing you can afford is getting your meals from the workplace, fatso.

> That's a lot of time for a genius like
>you to "get the job done". And there are plenty of VE sessions in your area
>between now and then. I've checked that out. I'd go to higher stakes but I
>am not quite done with my management trainee period at Domino's and can't
>afford to risk more. I'll send the certificate to W4NTI to hold. A $10.00
>McDonald's gift certificate is acceptable as your ante. I eat at work
>everyday so I don't need a Domino's certificate. Just send the gift
>certificate to Dan. Put your money where your mouth is, braggart!

You eat at work everyday? Hahahahahahahahaha, a 350 lb. corpulent dolt can't do any better than a minimum-wage job as a pizza boy. Now, hahahahahahahahaha, that is the height of ambition, to be a pizza shop manager.
Hahahahahahahahahahahahahahahahahahahahahahahahahahahahahahahahahaha
The acne-scarred geek whit trash's idea of success!

>Are you going to cluck-cluck-cluck for us, Ms. Wiseman?

No, But I'm sure you'll gobble, gobble, gobble down your boss' manmeat tonight.

> Or are you going to
>hit the books and code tapes/programs? Please don't tell us you don't
"have
>the time" to study right now. Anyone who sits in a transfixed catatonic
>trance in front of their 14" monitor the way you do has plenty of free time.
>I can tell you, beyond any shadow of a doubt, that will not be taking the
>General class exam anytime soon.

">I can tell you, beyond any shadow of a doubt, that will not be taking the
>General class exam anytime soon."

Bwhahahahahahahaha! You'd better brush up on your English skills, functional
illiterate.

> But I am not delusional enough to show my
>ignorance to the world concerning a "resonant" antenna such as you have done
>in here.

No, you're satisfied to make an ass out of yourself by the use of your poor,
substandard English, pizza boy. A ill-educated pizza boy casting aspersions on
others. What irony!

>"Care to make a wager???"
>To quote a familiar phrase that you have learned to love over the years:
>"BWAAAAAAAAAHAHAHAHAHAHAHAHAHA. Liar, prove it!"
>Okay, Ms. Wiseman. It's Show Time! Let's see if you can "walk the walk" as
>Dan often says. And don't try running up the stakes in an attempt to get me
>to drop out of the wager. I've already told you that $10.00 is all I can
>afford to risk at this time. So show some class for a change. Don't
try to
>wiggle-worm out of a bet you've proposed.

"Show some class.." says the welfare recipient Libnet.

>Anyone else want to take Roger up on the wager he proposed? A guy with a
>butler ought to be able to cover a lot of bets at $10.00 a wack. Who else
>wants some of this hot action? How about you, Cecil! How about you
>Covert62? Or you, Jeffrey? Or you, Jim, way out there in the Pacific?
Or
>you, Dan, W4NTI? If Ms. Wiseman gets enough takers, he'll be eating free for
>a month. He can even barter those certificates for a nice pre-owned HF rig.
>And Dan, how about <you> being Roger's "Elmer" and getting him on HF by
>October 1st, 1998. That would be a nice thing to do for your "back-up" chum.
> Will we hear Roger's voice on 3901 on or before October 1st, 1998? We shall
>see. In the meantime, Ms. Wiseman, I suggest you quit listening to the
>voices you claim are CBRambo amd Topo Giggio on 3901. They're not real.
>They are being generated in your sick mind. They are audio hallucinations, a
>common symptom of schizophrenia. Seek psychiatric treatment and start
>burning the midnight oil over your General Class license manual.

>Go get him, Cecil!

You have to get somebody to _do_what you _cannot, eh?

If you've got adjustable weighting on your keyer, and want to set it to 1:3 or whatever, here is a simple idea that does not require a scope. If you have a PC with soundcard, set up in record mode, record a dit and a dah, and measure the time duration for each off the screen.

Ok, I agree, it isn't *much* of a contact, but they call it a contact,
and *low speed* Morse is used by most of them because that
works better at a low SNR than higher speed Morse.

>"cost someone their life?" Are you referring to a "startle reaction"
>when the officer hears my pleas for help, and is awakened from his nap,
>or he spills some Dunkin' Donut coffee on himself?

Well, I have been at RTAs and other emergencies myself, and it's curious how many times hams turn up asking if they can help because 'they were passing by'.
This kind of behaviour I cannot accept. I think it's legitimate that if life (not property) is in danger, you should be allowed to use any frequency in the spectrum to try and make a call.
I also think it's true, that if you have both a cellphone and a HT, use the cellphone first, then the HT in your licensed bands, and then wherever they can hear you.
I recently myself came across an RTA that happened about 30 seconds earlier, and I called an ambulance on the Red Cross frequency, as the valley we were in had NO cell coverage. I also heard the local Police get a call from someone who just arrived at home reporting the RTA, and when they got there, the ambulance was well on the way.
Had I not made the call, the Police would have had to (via their radio autopatch), and the victim would have lost many precious minutes.

>Good idea! If I witness a robbery, rape, or shooting I'll call the
>police chief at home and ask if I can use their repeater for 10 seconds.

Those situations warrant 'alternative' means, but there are a lot of other less sensitive frequencies, like cab firms, etc. etc.

MEDIA STRUGGLES WITH SHOCKING NEW DETAILS OF WHITE HOUSE AFFAIR

Warning: Contains Graphic Description

In a bizarre daytime sex session, that occurred just off the Oval Office in the White House, President Clinton watched as intern Monica Lewinsky reportedly masturbated with his cigar.

It has been learned that several major news organizations have confirmed the shocking episode and are now struggling to find ways to report the full Monica Lewinsky/Bill Clinton grossout.

Media Bigfeet are trying to reconstruct one sex session that reportedly took place as Yasser Arafat waited in the Rose Garden for his scheduled meeting with the president!

According to multiple sources close to the case, President Clinton allegedly masturbated as Lewinsky performed the sex show with his cigar in a small room off the Oval Office. It is not clear if Clinton or Lewinsky kept the cigar, or if Lewinsky testified on the specifics of the encounter before a federal grand jury this week. Lewinsky's testimony has been described as graphic, and included unusual practices.

The DRUDGE REPORT has now been briefed on these shocking details that have stunned all those who have heard them and investigated them -- details that now threaten to completely disgust and stun the American electorate.

The White House refuses to comment on any DRUDGE REPORT.

>very much off hours.

The band isn't even well loaded during peak hours. Ordinary FM repeater technology, which amateurs pioneered, is no longer the best way to utilize spectrum. We should be looking to trunking and cellular techniques to better utilize the spectrum. And we can do that cheaply thanks to mass market ICs developed for the commercial sector. But we don't because there is no pressure on us to utilize the spectrum more efficiently. We'd either need a lot more amateurs, or we'd need to lose a lot of spectrum, before spectrum pressure would force us to switch to more efficient band loading strategies. Obviously, I'd prefer the former to the latter.

>Keep in mind, though, that even frequencies that aren't actively being
>used still serve a purpose: when an emergency arises, they are
>available. In fact, a big rationale for amateur radio and its

>and use two way radios that are useful in an emergency.

Well the same could be said for any radio service. There's a definite advantage to having radio users thick on the ground so that they are available in case of emergencies. That's a good argument for making amateur radio more attractive and accessible so that more operators will obtain radios and learn how to use them effectively. That would also tend to automatically bring band usage up closer to the levels in the adjoining commercial spectrum and increase the probability

that we can justify holding onto our relatively large allocations. We've
seen some of this happen thanks to the Tech license, but we haven't
yet reached the vigorous level of usage required to force a change
to more efficient techniques.

> Far too many of us operate as if it were 1958 instead of 1998.

>converting everybody over to digital spread-spectrum communications
>I don't think is a good idea, even though we should pursue those
>technologies.

SS is now a consumer technology. The chipsets are now very cheap.
Cost is no longer a legitimate excuse for not vigorously pursuing this
technology. There are some legitimate technical issues involved in
trying to implement SS in a sparse network environment, however.
This is an area where amateurs could make a valuable contribution.

SS can share spectrum with other users without formal coordination.
In fact that's one of its most important strengths. But we don't take
advantage of this because SS is barred from the bands where it
would be most valuable, IE those VHF and HF bands with the most
loading. On virtually empty bands like 70cm and above, there is no
need to go to SS. Ordinary FSK or analog voice techniques suffice.

>Areas where I see potential for improvements are off-hour utilization

>to amateur radio links. That software used to connect the whole of
>the US fairly reliably via off-hour, low-speed links.

Yeah, the packet BBS systems used to do this. But the wired internet
has pretty much obsoleted low speed message forwarding. Few people
are willing to put up with message latencies measured in days anymore.
We need to think about what is a viable usage for radio and what isn't.
For some things, radio is the only logical choice, for some others it is a
viable choice, but for many things it just doesn't serve as well as other
means. For a local/regional area, however, high speed wireless is still a
viable usage for amateur spectrum. That can be faster than the local wired
loop, and works for mobile users too. It requires a wider channel than that
of an analog FM voice channel, however, so it won't fill idle time on the
FM voice repeaters.

Here in Georgia we've had a 56 kb packet network which works on
100 kHz channels for 12 years now. Our coordinating body has assigned
us 5 pairs for this usage on 70cm, and we also utilize the data only 219 MHz
band and a couple of channels on the 222 MHz band. This is great. We can
use things like whiteboard conferencing over the air to hash out technical
ideas. That's much better than trying to describe things via voice or by
ASCII art. And we can have scanned schematic databases available for
web browsing over the radio net. That's handy too. Those things aren't
practical with a low speed net. We could do this via wireline, but it is more
fun to do it via radio, and with our network speed it is a viable usage.

Data and analog voice don't mix well on the same system. That's been
tried with disappointing results. Voice users don't interact well with
protocol modes. Even off peak there are generally at least a few voice
users monitoring the systems for a call. Having a BRRAAAPPP key
the repeater every few seconds really ticks them off. There are some
technical fixes for that, different PL tones for example, but they haven't
worked out very well in practice. If you can think of a clever way to
integrate the two differing usages, you'll have a winner. My cut on it
is that it won't be viable until the voice users are also digital instead
of analog. Then the sharing strategy can be automatic and relatively
transparent to the user.

>Directory services address the problem that people, I think, have a
>difficult time coordinating conversations over the air. One thing
>that makes amateur radio interesting and different from the telephone
>and the Internet is that it is inherently a shared and open medium.
>It's more like conversation around a water cooler, but on the

>I think it would be great if people could indicate where (frequency,
>geographic location) they are available for conversations, what
>interests they have, and whether any particular conversation of two
>people is open for more to join in. Mobile and portable stations
>could submit their information through DTMF and/or morse code to
>particular servers, and all stations could access that information
>either through the air or through the Internet.

This may be a good application for APRS. TAPR offers the MIC-E
which encodes station location in a burst upon PTT activation. Other
info can also be encoded in single line format. This info could be shared
between systems in near realtime by high speed wireless links. But see
the note about analog voice and data sharing the same system. It tends
to really tick the voice users off because it is not transparent to them.
Of course trunking and cellular systems solve this by putting this
administrative overhead on a separate control channel. If we go to
trunked or cellular type systems, we get this capability for free. But
we're unlikely to do that because we don't need to use spectrum
that efficiently due to the present very light loading of our bands.
If we had 10 times as many amateurs, it might start to look viable.

>Just a comprehensive on-line database of nets, individuals,
>frequencies, interests, and times would be a great start, even
>if it isn't updated in real-time.

You may find a good deal of this on existing packet BBS systems. Most of this sort of info should really be handled by a broadcast server paradigm, however. Radio is inherently broadcast, and it makes little sense to have different users download the same information over and over. Just broadcast it and let everyone pick it up and cache it on their local systems. There is packet software available to do this.

Nationally, packet seems to be in the doldrums at the moment. In most areas it is stagnant at a 1970s technical level. Perhaps what we need is a killer app to revive it. So keep thinking, you could come up with the application which would drive packeteers to upgrade their networks to handle it. That could create enough spectrum pressure to cause us to revise all of our operating strategies.

As I noted above, one of our strengths is mobile usage. I've toyed with the idea of a traffic reporting server for use by our mobile operators during rush hour commutes. Here in Georgia we have traffic cams located at many points along our expressways and major thoroughfares. These pictures are available in near realtime (5 second lag) on the internet. It should be possible to arrange for a packet broadcast server to grab these pictures and transmit them on our 56 kb network. With a laptop in the car, a commuter could have the pictures along his route displayed for him with only a short lag. This would allow him to see any backups and take an alternate route if necessary. This might be a killer app for urban areas with lots of traffic congestion.

We only have a handful of amateurs with 56 kb in their cars now, but this might just be the thing to spur more to install such systems. Or perhaps there is another way. Kenwood has a itty bitty SSTV system that can plug into any FM radio. We could grab the pix and translate them to SSTV format and send them via a voice repeater. This isn't as slick and sexy, but it could be easier to get amateurs to accept, and it certainly would keep at least one voice repeater busy.

If you're looking for a challenge, instead of beeping at CO, why not swim the
Florida Straight and deliver your message in person. Hell, there will
probably be a band playing and Fidel will offer you a big fat cigar. Should
be lotsa fun. Let us know how it turns out.

2013. Is CW fun? Depends on what you consider fun!

Well, that really depends on aspect of the hobby you enjoy most, doesn't it? I derive the most enjoyment from *communications* per se, not necessarilly the mode I use to accomplish it. Why would I bother to read these newsgroups, if not for the *communications* aspect of it!

While others enjoy other aspects of ham radio with PACTOR, RTTY, satellite, etc., I haven't developed any interest in it. Frankly, I am *glad* that there are so many different modes of operation available... otherwise, the pileups on 20m would be even worse than they are now (at times). There is a "challenge" built into every mode of operation, if one is paying enough attention to notice them for what they are.

I also enjoy "homebrewing" antennas, should I "put down" the ham who purchases "ready-made" antennas? I think not... Likewise, while code is a mode which _is_ available to me, I long ago lost interest in it and moved on to other aspects of the hobby which proved to be more satisfying *to me*...

As far as I'm concerned, those who *enjoy* CW should be rewarded for their diligence and preseverance! By all means, make CW an "endorsement" to a ham ticket, a "higher privelege" which must be earned. However, it isn't the "be all and end all" of amateur radio.

2015. Yeasu FT-847...Before you buy one read this...

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-23 00:00:00 UTC
From: jmslater <jmslater@mvillage.com>
Message-ID: <6ro92heuk1@client3.news.psi.net>
Source record: 164017

MY FINDINGS USING MY 2 MONTH OLD FT-847
I have had this rig for only a few weeks and there is much to be discovered about it. The menu system is a very foreign approach for me and I have yet to explore all of the capabilities.

I am disappointed that the rig will not allow a dual watch capability...by that I mean being able to hear the traffic on the main band as well as the sub band simultaneously. You have to push the A/B function to hear the sub band and vica versa. There is no way to tell if traffic is occurring on the sub band while listening to the main band. The only way to work around this is to use the Priority function but that introduces an annoying "break" in the main band every five seconds...it is distracting and annoying.
I also DO NOT like the cross band repeat function. So far I have only been able to get the rig to cross-band repeat ONE WAY only! If I use UHF as the input and VHF as the output it does only that...those on the VHF freq. who answer me cannot TX back to me. This rig DOES NOT cross-band repeat from VHF back to UHF. If the FT-847 does cross-band repeat both ways I would sure like Yeasu to explain how! (perhaps my rig is faulty?)

FLASH! FLASH! A Yeasu rep. told me this radio is NOT "bi-directional" in the cross band repeat mode. (their literature never mentioned this!) He said this is done to "aid" satellite users. Eh? I say it is not a true cross-band repeat function as MOST amateurs define it and Yeasu should have been more explicit in their literature on this one! If you want a radio to FULLY cross-band repeat, this is NOT your cup of tea! Stick to a dual band mobile rig of your choice. The FT-847 just does NOT cut it!

The "Full Duplex" function on the Yeasu FT-847 is also a bust unless you are a satellite buff. It is not what I consider to be a true full duplex....if you wish to access this function you MUST put this rig in the Satellite mode first and then program the frequencies over the pre-programmed ones. I have to do a bit more research in this area, BUT without the Dual Watch feature this rig is not what many of us envision as a REAL full duplex. Again, your dual band mobile rig will do much better without the hassles.

I have been pleased that the receive on this radio is very sensitive and in spite of one report that I got that commercial AM signals interfered on the 160 meter bands I have found it to be just great. I have not heard any interference from any commercial or other stations on this rig. The rejection seems to be wonderful and in light of the illegal CB'ers we have in this area I have not had any troubles while using the ten meter bands in the form of "splatter" from the outlaw good buddies.

I have had glowing reports on the audio qualities of this rig when I use it on the VHF/UHF frequencies and that is easily adjusted via the Menu system. My only "bitch" is that when I go to the HF bands that I cannot control the Processor as

can be done with the Yeasu FT920. This rig only allows me to turn the processor on or off with no adjustments in between that I have been able to find. This is a "short sheeted" engineering oversight by Yeasu.

I especially do not like the fact that the stock mic does not have a touch tone pad on it...if you want that you have to order a ttp mic as a $60 add-on. That stinks! Ergo, if you wanted to use this rig to access an auto-patch system on a local repeater you cannot do so with the stock mic. Yeasu should have done better on this one. I expected more from them than this considering the hefty ($1850) price of the radio. Are they so hard up for sales that they could not have included a decent mic with this high dollar rig? After all, it must cost them a whopping $5.00 to include a mic with a touch tone pad! The TTP mics that they use for the mobile rigs are the same as the mic they send with the FT-847 with the big difference being a modular vs. a 9 pin plug. Does Yeasu need income that badly that they did not make their other mics compatible with this rig?

(side bar....my MD-1 desk mic works on the FT-847 tho it was designed for the FT-767....the only difference is that the UP/Down keys do not work...this is a simple wiring change)

I admit that I have much to learn about this rig, but I am NOT convinced that it is the ultimate of rigs. I am just now beginning to have regrets about buying it and I seriously question whether it is worth the purchase price. It does nothing better, it does not outperform and it does not work better than my FT-767 or my FT-8000 mobile rig. It certainly does not hold a candle to the FT-920!

I have also found that memory storage in the 2 mtr and 440 modes does not store the programmed power output level as does the FT-8000 mobile rig. This is a problem when switching from a 2 meter freq. in which you may have only been using 5 watts to a 10 meter freq. where 5 watts is not enough! It is also disconcerting when switching back from HF to VHF to have to constantly readjust the RF Power knob with each change. If Yeasu can allow output power to be programmed in their mobile rigs memories they should also have been able to do the same with the FT-847!

Other drawbacks.....This rig has no SWR meter nor does it have a built-in antenna tuner...not even an inexpensive one which will tune from a standing wave from 3.1 on down such as the predecessors (FT-767, FT-920) have. If you want a tuner you must buy the accessory tuner or already own one as an out board item. This is a MAJOR draw back.

Result: If you want a 2 mtr/440/6mtr/HF rig with all mode capabilities, this is an acceptable unit at best. Is it worth the hefty price? I would say that it is not, in spite of the fact that I purchased it. If this rig were priced a few hundred dollars lower than what it is, it could well be the only rig one would ever need in a shack. Will I keep it? That one is a toss-up at this time. I do not feel that this FT-847 is "the cat's meow".

If I had a wish list with this radio I would first and foremost wish that Yeasu would have engineered this rig with the majority of Hams in mind who do not run satellite ops. Satellite could well be an option, but Yeasu left out some viable options on this rig for "other" users.

1. INCLUDE A TOUCH TONE MIC.

2. Include some sort of internal antenna tuner.

3. Include metering to "see" the standing wave ratio.

4. Incorporate a TRUE cross-band repeat function. (bi-directional)

5. Utilize a "dual watch" feature like radios of similar cost have.

6. Allow for true full duplex without using the Satellite function.

7. Install an internal duplexer to allow 2m/440 ops from the SAME antenna as a menu option. (such as they do with the 6m/HF option)

These are my findings after having this rig for several weeks. Any questions/comments can be addressed to me at any time and I will attempt to answer them for you. My advice on this one is "Buyer Beware!" Sometimes you DON'T get what you pay for!

Are you "My Favourite Martian" with a antenna on each corner of your head? If not, then you have to use a radio receiver, just like everyone else. In case you haven't noticed, they are "electrical equipment".

Of course, you could be one of those people who think the CIA is beaming "voices" (or in your case, Morse) directly into their heads. ;-]

Your ABC TV network interviewed this nut on June 8, 1998 and let him use ABC as his sounding board for his psychotic ramblings. If ABC News didn't stink so badly it wouldn't need to pander to terrorists for ratings.

Maybe I don't have a call anymore because opinionated hams like you don't let the rest of us express our opinions on the radio without ROTTEN QRM. Maybe I know from experience what loser nerds so many of you are.

Why don't YOU turn in your American Communist Party/PRESS ID card ? The Russians gave up on that John Lennon commie peace crap in 1991.

2021. CW Forever

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-23 00:00:00 UTC
From: Jim <ham@nomail.com>
Message-ID: <6rogkdfqm1@holly.prod.itd.earthlink.net>
Source record: 164023

KH2D on Morse Code ......
HISTORY OF CW IN HAM RADIO, THE BRIEF VERSION.
Morse code. CW. Charlie Whiskey, as some of the old guys call it.
For years, ham radio operators
have communicated with each other using Morse code. Dits and
dahs. Simple, but effective, means of
communications.
Morse code has always been one of the testing requirements for
amateur radio licenses. The higher the
class license you wanted, the faster you had to be able to copy
Morse code.
Hams with a beginners license (Novice) were allowed to operate on
a few HF bands in portions
referred to as the 'Novice Bands' after passing a five word per
minute Morse code receiving test.

THE NO CODE TECHNICIAN LICENSE
Then, a few years back, somebody, doesn't really matter who,
decided there was not enough growth in
amateur radio, and that Morse code was keeping people out of the
hobby. They decided we needed a
license class which allowed hams to operate using a microphone on
the HF bands, without taking a
Morse code test, and hence the 'No Code Technician' class license
was invented.
The No Code Technician, did, indeed, start a rush of people
wanting to join the ranks of amateur radio.
No Code Technician class operators were given phone operating on
VHF, phone privileges in the six
meter (50 mhz VHF) band, and with the Novice Enhancement a few
years back, a 'TECH PLUS' (5
wpm code) also got the ten meter (28 mhz HF) bands.
Only two problems with this. One, six meters is a band where you
have to be very, very patient (or
very, very nuts) to operate - it 'opens' very sporadically, and
you may have to listen for three months
before you hear anybody to talk to. Wow, that's exciting, huh ?
Two, ten meters, on the other hand, is
a band where world wide propagation with low power is available -
during the peak of a sunspot cycle.
During the bottom of a sunspot cycle, you may have to wait eight
years before you hear anybody you
can talk to, with the exception of the guy who lives about 3
miles up the road. Even more exciting.....

NOW HERE WE ARE IN 1998
In the 90's, and in the United States, most people are impatient. Somebody along the way coined the
phrase 'THE NOW GENERATION'. I can't really blame anybody for not wanting to buy a radio and
wait eight years to get to talk to somebody with it, eight years is a long time.
Use to be, the people who came into ham radio got there because of either an interest in electronics, or a
fascination with the 'magic' of radio - communications with no wires. Problem with the No Code
Technician license is it didn't seem to attract too many of these kinds of people. It seems to have
attracted a lot of people who aren't really sure why the heck they have a ham license. It seems to have
attracted a lot of Dick and Janes, who wanted to keep in touch with each other with a 'radio' and wanted
to find something for their two kids to become involved in - and it seems to have attracted a bunch of
people from the NOW GENERATION.
Decide which group you belong in, and read on to figure out what to do.

DON'T KNOW WHY YOU HAVE A HAM LICENSE ?
Well, then don't expect me to know why the heck you have one either. Tear it up. Do not pass go.
Don't collect two hundred dollars. Hit the bricks, you're outta here....
Still reading ? Take this simple test. If you answer YES to any of the following questions, you are here
for the wrong reasons too:
1. Do you live on a sailboat and use ham radio for your normal regular communications ?
2. Do you work for a large religious organization and were you encouraged to get a ham license in
conjunction with you missionary work ?
Ham radio is NOT a replacement for an INMARSAT terminal or a commercial radio on a sail boat. If
you think you are going to run into a reef one day and then call somebody on the ham bands to come
and save you, you are a fool. You probably know as much about ham radio as you do about sailing. Do
yourself a favor. Get rid of the radio AND the boat.
Twenty meters is NOT God's replacement for the telephone system. By conducting your church
business on the ham bands you are breaking the rules. Granted, you won't find too many people who
will confront you about it - who wants to take a chance arguing with God - but you will find a few. You
found me. Don't dare bang on my door and explain to me how I should live, when you can't even

follow a few simple rules.

WHERE ARE DICK AND JANE ?
Lost. They thought ham radio was a cheap replacement for a cell phone. Neither Dick nor Jane were ever really interested in electronics, or the 'magic' of radio, or God Forbid, this Morse code stuff. They didn't realize that EVERYBODY on the local repeater could hear them talking about honey do this and honey don't do that. They didn't realize that the two kids would be subjected to the conversations of dirty old men. They didn't realize that everybody with a ham ticket isn't a 'nice guy'.
What should you do if you fit into the Dick and Jane category ?
Proceed directly to the nearest hamfest.
Sell all the handy scratchies (HT's). Tell the two kids that God canceled ham radio. Forget about ham radio. Somebody misdirected you here. You should have never been here in the first place. We are very sorry, please contact your local VE team and see if you can get your $ 6.25 back. Go collect Huggy Bears.

AND WHERE ARE THE NOW GENERATION ?
Angry. The Now Generation of No Code Technicians can be subdivided into two basic groups - a) Angry And Not Interested In Ham Radio Group, and b) Angry But Really Interested In Ham Radio Group.
Why is the Now Generation of No Code Techs ANGRY ? Well, that's easy to explain. Somebody else has something they want, and they can't have any, unless they are willing to expend a little effort to get it, like everybody else who has it did. They don't want it LATER - they want it NOW ! And what, pray tell, IS it that they want - NOW ? They want to operate on HF, on ALL the HF bands and they don't want to use this MORSE CODE stuff, they want to use a MICROPHONE ! So what are they doing about it ? They are bitching, they are whining, they are crying, they are complaining, they are thinking of hundreds of reasons why they a) can't learn Morse code and b) why they shouldn't have to learn Morse code.

GROUP A - ANGRY AND NOT INTERESTED IN HAM RADIO.
You got a No Code Tech License. Well good for you. Any monkey can pass a written test if you give him the answers to all the questions and enough time to study. Interest in electronics ? No ? Interested in the magic of radio ? No ? Oh, you really don't know, huh ...

Well, stop wasting your time crying to
get on HF - if you get there, you'll be as out of place and
confused about what to do as you are on the
VHF repeater. You already wasted money on the HT, don't bother
wasting any more on HF gear
because we got enough used stuff flying around now, and we don't
need you to add to it.
What should you do at this point ? Back up two paragraphs and
read my advice for Dick and Jane. Hit
the bricks. Don't look back. You made a mistake. Don't compound
it. Now's your chance to exit stage
left. Do it.

GROUP B - ANGRY BUT REALLY INTERESTED IN HAM RADIO.
Congratulations ! If you are in this group, you are a lot better
of then the guys in group A. But you still
have a lot of problems. All the old ham guys make fun of you,
right ? They call you terrible names, like
NEWBIE or GEEK or TECHIE, right ? Really hurts your feelings,
because you are really interested in
this ham radio stuff, and you really just want to be 'one of the
guys', right ?
Well, here is my advice for you. First off, if you have a friend
or friends who started in ham radio
when you did, and they fit into group A above, dump them. You
have enough to deal with right now,
you don't need any advice from some loser with an HT that doesn't
have the same interests as you do.
You are different from them. You are really interested in ham
radio. They are excess baggage you don't
need right now.
Second of all, you have to realize a few things. You aren't an
idiot, even though hanging around with
your friends from group A might make you think you are. Being the
NEWBIE, the GEEK, the
TECHIE is all part of the program. Twenty five years ago, when my
friends and I were starting in ham
radio, we were the LIDS, the KIDS, and the SPACE CADETS. But we
lived through it. You will too.
There are two basic things you can do about this Morse code
stuff:
One: You can petition the Federal Communications Commission in
Washington, D.C. to change the
rules so that you can get on HF without taking a code test.
Two: You can do what you have to do to learn Morse code, upgrade
your license and become involved
in a very enjoyable hobby that will go with you wherever you go
the rest of your life.
Those are your ONLY two options. Hanging around with the losers
from group A isn't going to get

you anywhere. Whining, crying, bitching, complaining isn't going to get you anywhere.
You MUST change the way you think. You have been hanging around with a bunch of bozo's so long,
listening to what they say, reading what they write, that you have convinced yourself that you are
STUPID. Too STUPID to learn the Morse code. It's too HARD to learn. You can NEVER learn Morse
code. Baloney. ANYBODY can learn Morse code. Little children have learned it. Handicapped people
have learned it. But before ANYONE can learn it they have to have one thing - the DESIRE to learn it.
You are really interested in ham radio, you have to convince yourself to turn that INTEREST into the
DESIRE it takes to do what you have to do.

YOU'VE DECIDED YOU WANT TO LEARN CODE
Before we get started on the code learning thing, there is something else you have to do that is very
important. Go to your local ham club. Meet all the old farts you hear on the repeater, the ones that call
you GEEK and NEWBIE and TECHIE. Listen to them talking, and find a few that are talking about
HF. From this group, pick the oldest, meanest, nastiest old fart out of the bunch. When the group starts
to thin out, approach this guy and tell him you are a new ham, tell him you are really interested in ham
radio, and tell him you need an Elmer. Nine chances out of ten, he'll volunteer for the job. If he
doesn't, you need to find an old fart who is meaner than he is. If he does, he'll be your most valuable
resource and a constant source of things that will never cease to amaze you.
Back to the code. How do you learn the code ? I don't know. I imagine different things work better for
different people. I can tell you how I learned code, but let me precede the learning advice with
something. When I got interested in ham radio, I wanted a ham license SO BAD I could TASTE it. I
didn't care what I had to do to get one, I knew I was going to do whatever it was. I NEVER for, one
minute, stopped to think about how much of a pain in the ass it was to learn Morse code - I was too
busy learning it. I NEVER, for one minute, tried to figure out how to get around learning Morse code -
I was too busy learning it. I NEVER for one minute thought about whether I liked Morse code or I
didn't like Morse code - I was too busy learning it.
I learned Morse code, to start with, with tapes and street signs. Jammed the tape in the tape player in the

car and listened to it driving back and forth to work every day. When I got to the point where I had the letters memorized, I started reading street signs and sending them to myself inside my head with Morse code. Probably a good thing nobody ever pulled out in front of me while this was going on, but luckily, they didn't.

And then I passed the five word per minute test. I had already purchased the radio, already made the 40 meter dipole, cut for the Novice band, already had it all plugged in, hooked up, and ready to go. Back then, you had to have a piece of paper in your hand before you could key the transmitter - no instant gratification from the FCC list on the Internet, so I waited what seemed like a hundred years, and the license came.

OK, you're thinking, you passed the five words per minute. But then how did you increase your speed to thirteen and then to twenty ? I didn't. The speed increased itself , thru the MAGIC of radio......

Once you have a license, the fastest way to get better at Morse code is very simple. You use it. You get on the radio, and you talk to other people using Morse code. Just like a baby increases his language skills by talking and listening to other people talk. Just like a baby increases his ability to walk by trying to walk.

My first contact with my new ticket was with a lady named Alice, WA4RRR, about 700 miles away. I was so excited I almost fell out of the chair - here I was talking to someone with a piece of wire hanging in a tree !! As a novice I made about 900 contacts using CW, while I was studying the theory for the rest of the written tests I needed to pass. When it was time to take more tests, I didn't have to worry about the Morse tests, they just took care of themselves.

WAS IT REALLY WORTH THE EFFORT ?

For me, there is only one answer to that question. Yes. Learning Morse code wasn't any easier for me than what I imagine it would be for most people. But I didn't let the fact that I had to learn it get in the way. Do I use only CW on the radio today ? No, I use CW, SSB, SSTV, PACKET, RTTY, FM, and whatever else ham radio has available. In the last 14 years, from the island of Guam, I have made CW contacts with over 36,000 other ham stations all over the world. Is CW the BEST mode for making contacts ? I don't know. The high tech guys say that some digital modes are much faster, and much

more efficient than CW. Those are done by machines, CW is done by people. Can you really compare
the efficiency of a computer to a human ? I don't know. But I can tell you this. On the days we go
down to the beach and sling a wire up in a tree, I can make ten contacts using Morse code when the
guys using a microphone can't make one. What's my code speed today ? I'm comfortable at 30 wpm,
can do contest exchanges at 35 to 40 wpm, and can copy call signs at 48 or 50 wpm according to my
computer and a program called PILEUP. Did I ever do anything to build up my code speed ? Yes, I
worked 36,000+ stations on HF using CW.

WHAT IS KH2D's POSTION ON NO CODE HF LICENSES ?
I don't have a position. I think it will probably happen some day. If it does, I won't loose any sleep
over it. If the rules change and a lot of people suddenly wind up on HF, I doubt most of them will be
happy with it because they will have missed out on a lot of information they need to collect along the
way. I think they'll be lost, confused about what to do, and eventually there will be a lot of radios that
don't get turned on anymore. Kind of like being dumped off the bus in the middle of downtown Tokyo
when you don't speak Japanese.....
Go to the zoo. Get a monkey. Take the monkey to the hospital. Dress the monkey in a white coat, put a
stethoscope around his neck. Put a wallet in his pocket full of business cards that say 'DR. MONKEY.
BRAIN SURGEON'. Put the monkey in the operating room. Come back in a week, and see if he has
done any successful brain surgeries. No ? Why not ? Because on his way from the zoo to the hospital,
he didn't gain any of the knowledge or get any of the tools he needs to be successful.
Nobody can predict the future, except those guys with 900 numbers, and I can't talk to them because
900 numbers don't work from Guam.
I think probably I'd feel sorry for the no code HF hams. I know a guy who has had a license for longer
than I have. A tech license. He has the money, the time, the interest, and whatever else it takes to really
enjoy ham radio. He wants to be 'one of the guys' really bad. He feels left out. He feels bitter. He's
constantly coming up with reasons why all the other hams around him should stop what they are doing,
and come back down to his level and do things with him. I watch him trying to convince everyone that
he's having a good time, but if he's fooling anybody, he's only

fooling himself. I have nothing behind
me but found memories and funny stories from my twenty five years
of ham radio. He has twenty five
years of feeling left out and bitterness behind him.
All because he couldn't muster up the desire to do what he needs
to do. Can you ?
73, Jim KH2D

2022. Blithering Idiots....

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-23 00:00:00 UTC
From: jmslater <jmslater@mvillage.com>
Message-ID: <6rok1g$8rj$1@client2.news.psi.net>
Source record: 164024

Blithering Idiots are easily enough found if one knows where to look. The denizens of this news group who post hateful diatribes make for an excellent starting point and are a classic example of inferiority complexive individuals. Certain "postees" are classic studies in substance abuse coupled with deep rooted mental deficiencies brought on by a dysfunctional childhood.
These individuals will almost always feel persecuted/victimized and will blame their tribulations upon others in spite of the fact that they bring their troubles upon themselves through their own foul acts.
Enough is enough....the mentally challenged should post elsewhere....it is NOT needed here.

Hallo Leute, ich habe ein Problem mit meinem Elevations-Rotor G-500A. Das Problem ist folgendes: der Elektromotor har 4 Spulen a 150Wdg und einen Querschnitt von 0.5 wenn ich auf diese Spulen eine Spannung anlege, f�llt die Spannung von rund 30V auf etwa 11V zusammen und aus diesem Grunde kann er nicht drehen. Ich habe die Wicklungen gemessen und die scheinen in Ordnung zu sein ? wer weiss mir einen Rat oder wo ich einen neuen Motor bekommen kann. Danke in voraus Fritz EB3GFN

> front)

This is a Marine transciever (AM mode) low power ~30-40 watts that likely was used on some small boat when the 2mHz AM marine band was still in use, before they moved it to 156 mHz FM. They're no longer good for much except a BC band receiver (most incorporated that since it was so easy to do) or possible conversion to a 160 meter ham AM low power rig. Documentation on these things is VERY hard to come by in my experience. (I have a version that I would convert to 160 if I could find the book).Mine is hybrid solid state with a tube driver and final in the transmitter.
There's was a variety of these rigs made by several manufacturers and they do show up from time to time. Some 160 meter hams use them mobile as many have 12vdc supplies builtin.

Hi Chris,

I have been down there, LOTS of whistlers, but not you if you know what I
mean....:-)

Seriously, what is the CW calling frequency? I thought it was 50.1 but no
one is there.

Christopher Cox

2039. poor service is defined at fho communications of pittsburgh

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-24 00:00:00 UTC
From: foster kartsotis <kartsfp@ch.etn.com>
Message-ID: <01b41e58$30bb90c0$97f294d0@libretto50.grt.ch.etn.com>
Source record: 163791

Hams of Pittsburgh BEWARE!

The ham shop located outside of Pittsburgh, PA known as For Hams Only should
change its name to "for idiots only" as only an idiot would go there twice.

my story starts on Christmas eve 1997. I wanted to make a trade for some ham equipment so I rounded-up my stuff. I took it all in there and got a deal that I thought was fair at the time. Rob, one of the owners, told me
he would order the radio I wanted and fix the hr-2510 all as part of our deal within a week or 2. well, the radio I wanted was a yaesu 8100 dual band and it took him almost 3 months to get one in for me. Every time I called he had a sad story on how yaesu was back-ordered or how UPS lost my
radio. This went on for so long that I figured I almost certainly was ripped-off since this whole deal was on only a handshake, seems rob doesn't
like to put anything down on paper and I didn't make a big deal out of it at
the time. I really don't think I would have ever seen that radio if I hadn't called his business partner at home and asked him to look into it.

my hr-2510 is another story. he told me that there was something really wrong with it. he ordered parts, we waited, he tried to fix it. then he told me that he couldn't fix it and had to send it to uniden to get it repaired. It would be fixed and returned by march 20th. March 20th came and went still there was no call from rob. I heard him on the radio and he
told me he left a message on my tape that my radio had been in. funny, my
answering machine has never malfunctioned before....

So, I went to pick up my radio today and he told me that uniden changes out
the entire board and certifies the radio as completely rebuilt. (again no
supporting paperwork from uniden, no warrantee, etc...) problem is that when
I looked the radio over at home I noticed it wasn't even the same radio I
gave him. the case was scratched-up pretty badly and the front panel and back sticker says hr-2600! Its not even the same radio I brought in! Who

knows where this radio was dug-up and frankly I don't want to know. I called rob and told him that there was some mistake as this is not the same
model I brought in to him. He told me that Uniden probably switched it for
the new 2600 model.

I emailed uniden with the serial number and asked them if there could have
been some kind of mix-up. They said that it came in a 2600 and went out a
repaired 2600 and the serial number matched. When I told this to Rob he said I gave him a 2600 as he didn't have any 2510's in his shop. I should
know what kind of radio I had since I bought it when the 2510 first came out
and had it in every vehicle I owned for the past 12 or so years. Well rob
is going to look into it, he claims, but I haven't heard from him in months.

My advice to anyone in the Pittsburgh area is not to deal with Robert D. Weiss, KE3EE at FHO Communications as he does not keep his word, cannot deliver any promise on time, cannot keep track of customers equipment, and
lies at any opportunity to cover-up his mistakes.

2041. HF MOBILE AMP KIT (RF PARTS)

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-24 00:00:00 UTC
From: FRANK <fdubec@goodnet.com>
Message-ID: <35E1A46B.1950@goodnet.com>
Source record: 163793

I purchased a HF Mobile Amp kit from RF parts a year or two ago and lost
the schematic and kit booklet. I think the kit instructions and printed
circuit board was manufactured by a company in the Phoenix, AZ area
(EDCO or ETCO or ??).
DOES ANYONE KNOW THE NAME OF THE COMPANY OR HAVE A SCHEMATIC?
It has a pair of 2SC2879's in it.

Message-ID: <6rs3n5$7ai$1@news.toolcity.net>
Source record: 163794
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

I'm looking at buying a new vertical HF antenna. I currently have a Cushcraft R-7000 and I've had problems with the traps since I bought it. Cushcraft recently sent me some new traps that were supposed to fix some of the problems but I'm still not happy with the antenna. I'm looking at replacing it and would like some recommendations on what to replace it with. I'd like all bands 10-40 and possibly 80 so I'm looking at the GAP Titan and the Butternut HF9V-X9. Anyone who has experiences with these or a recommendation on other antennas I'd really appreciate your input. Please send replies to keith@toolcity.net Thanks and 73.

A section (http://www.ipass.net/~whitetho/part2.htm) of my web page
reviews early U.S. radio regulation, including amateur information
related to this topic.

U.S. amateur stations and operators weren't required to get licences
until the passage of the "Act to Regulate Radio Communication" on August

13, 1912, which went into force on December 13, 1912. The evolution of the earliest amateur polices is included in three editions of "Regulations Governing Radio Communication". The September 28, 1912 edition (http://www.ipass.net/~whitetho/1912reg.htm), issued before the new law had gone into effect, stated that, for amateur operator licences: "The applicant must be able to transmit and receive in Continental Morse, but no speed rate will be prescribed."

However, this quickly changed, and in both the February 20, 1913 and July 1, 1913 editions (http://www.ipass.net/~whitetho/1913areg.htm and http://www.ipass.net/~whitetho/1913breg.htm) the code requirement for amateur operator licences became: "The applicant must be able to transmit and receive in Continental Morse, at a speed sufficient to enable him to recognize distress calls or the official "keep-out" signals. A speed of at least five words (five letters to the word) must be attained."

The July 27, 1914 edition of "Radio Laws and Regulations of the United States" had identical language with respect to this five-words-per-minute requirement. (http://www.ipass.net/~whitetho/1914reg.htm#R122)

All U.S. amateur stations were shut down during World War One for the period from April, 1917 through October, 1919. And during this interlude the requirement for amateur operators was increased from five to ten-words-per-minute.�The August 1, 1919 issue of the Radio Service Bulletin (http://www.ipass.net/~whitetho/1914amnd.htm) included the following regulation amendment:�"Paragraph 122, page 63, amended December 20, 1918, to read: Amateur, first grade.--The applicant must be able to transmit and receive Continental Morse code at a speed sufficient to enable him to recognize distress calls or the official "keep out" signals. A speed of at least 10 words per minute (5 letters to the word) must be obtained."

The August 15, 1919 edition of "Radio Laws and Regulations of the United States" had identical language with respect to the new ten-words-per-minute requirement. (http://www.ipass.net/~whitetho/1919reg.htm#R122)

I don't know of any other modifications in the amateur operator code requirements for the period through mid-1920s.

>I think you right wingers have been watching too much TV. You are
>starting to believe those clever little TV ads where corporations try to
>convince us that they really care about society. Don't be so naive! In
>case you didn't know, corporations care about only one thing: PROFITS.
>

You forget power, that is important too. But make all businesses
seem as if they are multi million dollar multinationals. There are
a lot of little corporations that are not much more than mom and
pop operations. Many farms are incorporated because of taxes
for example. Often they are victims as well.

>And if dumping toxic waste in your drinking water rather than disposing
>of it the safe way, is cheaper for them, they may dump it in your water.
>Why? Because it means less expense, and more profits for them.
>Especially if they know they may not get caught. So the corporation
>does it, and your family gets cancer. What then?
>

I know farmers that have done the same. Hell, some people even
dump their garbage along the highway. It is human nature not to
want to be forced to do it the right way.

>Government is the only entity that can police, deter, catch and prosecute
>these corporations. Without government regulations over big business,
>we are left with consumer actions (i.e. boycotts) as a remedy. Only
problem >is, consumer actions are all AFTER THE FACT. After people are
killed or >injured, the consumers will learn about the wrongdoing and take
action. >AFTER THE FACT. Government regulations and inspections help to
>PREVENT these things from happening BEFORE THE FACT.
>

The big corporations have million dollar law firms to fight the EPA
and OSHA. Some these agencies go after the little guys who do
not have the lawyers. And usually the little guy isn't causing the
problem.

>Furthermore, only government can fairly run food health inspections in
public
>restaurants. What private business can fairly run food health inspections?
>With the frenzy of corporate mergers, it would only be a matter of time
when
>the private business meant to inspect food health safety standards will be
>affiliated with some major restaurant business/corporation that is supposed

>to be inspected. There will be a conflict of interest. And who then will
fairly
>inspect for food safety?
>

Well, the Federal government does not inspect local restaurants. That
is usually the county or city. You make government sound as if it just
Washington DC. There are many levels of government. Generally
the closer to home the better. Easier to bitch at the mayor than the
president.

Besides, for most government workers it is just a job. They don't
give a rats ass about you. We can't even get the FCC to enforce
the laws on CB or Ham radio. Oh, they love making rules but it
is too blue collar to go tell some CBer to clean up his act. The
Feds want to make rules and laws then get the states to spend
the money on enforcement.

Go down to 3950 Khz, listen to the neo Nazis and other trash
fight on the ham bands. Read the posts on Rec.Radio.Amateur.Misc,
Rec.Shortwave, Rec.Scanner, Alt.Scanner or Rec.Radio.Amateur.Policy
and see how they feel. The FCC will not lift a finger to help. Hams
are one of the few groups that WANT more government involvement.
At the same time the FCC has given them greater power to be self
policing. They even give their own tests for licensing. The government
has stepped back.

If the government is so great, have it clean up the CB mess first!

>Speaking of corporate mergers and monopolies. Who is the only entity
>that can break up corporate monopolies? Government.
>

Perhaps, but the feds are not as interested in the job. What is
a monopoly today has all sorts of competition tommorrow. Or
is out of business.

>So you see, government, because it is elected and accountable to we the
>voters, is the only entity that can fairly keep an eye on the profit driven
>business world.
>

I am not so sure that government is so accountable. Democrats
have been bought off just as fast as Republicans. Even at the local
level, it seems that government leaders are just not listening. Clinton
seems to govern against the will of the people. The only thing he has
done is not screw the economy up. For that people are not bitching
at him.

>P.S. It is politically correct to bad mouth the post office, but what
private
>business will mail a letter from your home, across the country for 32
cents, >generally in a few days? And what private company will do it

without the >possibility of a strike - remember the UPS strike? ONLY THE >GOVERNMENT-RUN U.S. POST OFFICE.

But the Post Office isn't part of the government anymore. It is semi private.

But then the Post Office doesn't even listen to its own workers.
Look at all the workplace violence at the old PO.

To all radio amateurs

SB QST ARL ARLB059
ARLB059 Comm Emergency Declared

Voluntary Communications Emergency Declared

Due to severe flood conditions in Southern Texas, all amateurs are
requested to cooperate by recognizing the existence of a Voluntary
Communications Emergency and therefore relinquishing the use of
frequencies 7285 khz (Emergencies) and 7290 khz (Heath and Welfare)
during the day and 3873 khz (Emergencies) and 3935 khz (Health and
Welfare) during the evening hours. The frequencies are to be
cleared within 3 khz either side of each frequency. The
Communications Emergency is expected to last at least 48 hours.

Save CW <net@net.net> wrote:

>I won't argue that there aren't digital modes which are better than CW, But
>all you need to copy CW is a pencil & paper.

Umm. To copy code off the radio, you need a radio too.

>Now, If other digital modes are
>to replace CW, then I propose that all prospective hams need to own a
>computer and buy a $300 dollar multi-mode TNC before their license can be
>issued. I've never met anyone who could copy RTTY or packet in their head.

Dinosaur thinking. Digital modes are not expensive. Computer equipment
appears all the time on the surplus market and in dumpsters. $300 TNCs are
a symptom of the stagnation in digital modes, but luckily are not required.
A decent sound card and the right software and you are good to go.

Better yet, let's start using chips which are available to amateurs and build
integrated digital radios. Lots of experimentation has been done with DSP
backends to the KK7B R2/T2 radios, lots more could be done.

>If you had to build a transmitter due to an emergency situation, a CW
>transmitter is easiest to build, and can permit worldwide communications even
>in the toughest band conditions. Try that with your pactor.

If you were in an emergency, you would not be building transcievers. If you
had to build one, you'd be dead or someone else would be.

>When CW is eliminated, then CB will increase by nine "new" bands and you'll
>hear "echo boxes" & "roger beeps" on your $1,000 rig as you attempt to work
>your best friend on pactor, and you shut off your rig in frustration.

Big deal. Cope with idiots, everyone else has to.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 24/2330Z AUGUST 1998 BY IPS RADIO AND SPACE SERVICES
FROM THE AUSTRALIAN SPACE FORECAST CENTRE
SUMMARY FOR 24 AUGUST AND FORECAST FOR 25 AUGUST - 27 AUGUST
STATUS INDICATORS SOL:** YELLOW ** MAG:** RED ** ION: ** YELLOW **

1A. SOLAR SUMMARY
Activity 24 Aug: High

Flares Max Fadeout Begin End Freq. Sectors
X1/1B 2212UT Confirmed 2205UT 2240UT all West Pacific

Observed 10.7 cm flux/Equivalent Sunspot Number for 24 Aug: 121/73

GOES satellite data for 23 Aug
Daily Proton Fluence >1 MeV: 6.9E+06
Daily Proton Fluence >10 MeV: 1.8E+05
Daily Electron Fluence >2 MeV: 2.50E+06 (normal)
X-ray background: B4.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
25 Aug 26 Aug 27 Aug
Activity Moderate Low to moderate Low to moderate
Fadeouts Possible None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 25 Aug: 120/72

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth 24 Aug: Quiet

Estimated Indices 24 Aug : A K
Learmonth 8 2222 232-
Fredericksburg 10
Planetary 14

Observed Indices 23 Aug : A K
Fredericksburg 14
Planetary 23 4454 3333

2B. MAGNETIC FORECAST
Date Ap Conditions
25 Aug 20 Active
26 Aug 16 Unsettled to active
27 Aug 20 Active to unsettled with the chance of minor

storm periods.
COMMENT: IPS Geomagnetic Warning 27 was issued on 24 August and
is current for interval 25-26 August. Increased activity possible
25-26 August due to susspected CME 22 August.

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band
Date Low Middle High
24 Aug Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
25 Aug Normal Normal Fair
26 Aug Normal Normal Normal-fair
27 Aug Normal Normal Fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
24 Aug 78

Observed Australian Regional MUFs:
near predicted monthly values

Predicted Monthly T index for August: 83

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
25 Aug 50 10 to 15% below predicted monthly values
26 Aug 65 5 to 10% below predicted monthly values
27 Aug 50 10 to 15% below predicted monthly values
COMMENT: MUF's are only expected to be depressed if the geomagnetic
disturance eventuates.

The recon vehicle just returned, and the mission was successful.
James O'Brien
3910 Hiram-Sudie Road
Hiram GA 30141
Said dwelling appears to be an old one story farm house with very faded red paint. The dwelling appears to have been the victim of a highway widening project several years ago, as it now sits approximately six feet from a very busy two-lane highway. Residents of this dwelling apparently enjoy the sounds of heavy traffic, day and night. Two very long and deep skid marks were observed in front of the dwelling, as if someone left or arrived in a hurry. There is no garage, only a rusty carport shelter. Antennas of every description are on and around the house, verticals, long-wires, etc. At least two antennas appear to have been pulled up in trees by means of rope, where they swing in the wind. A DBS dish was in the back yard. The grounds were very poorly maintained and need of landscaping. Two vehicles were in the rusty carport, one red Ford T-bird and one black T-bird. The black T-bird has a busted out passenger window. Both vehicles appeared to be in poor condition

The recon vehicle just returned, and the mission was successful.
James O'Brien
3910 Hiram-Sudie Road
Hiram GA 30141

Said dwelling appears to be an old one story farm house with very faded red paint. The dwelling appears to have been the victim of a highway widening project several years ago, as it now sits approximately six feet from a very busy two-lane highway. Residents of this dwelling apparently enjoy the sounds of heavy traffic, day and night. Two very long and deep skid marks were observed in front of the dwelling, as if someone left or arrived in a hurry. There is no garage, only a rusty carport shelter. Antennas of every description are on and around the house, verticals, long-wires, etc. At least two antennas appear to have been pulled up in trees by means of rope, where they swing in the wind. A DBS dish was in the back yard. The grounds were very poorly maintained and need of landscaping. Two vehicles were in the rusty carport, one red Ford T-bird and one black T-bird. The black T-bird has a busted out passenger window. Both vehicles appeared to be in poor condition

Just more junk with alot of bells 'n whistles from the company that sent me a
new rig with a dead battery back up and 2 KHz off frequency.

When will you guys wake up and say screw Yaesu with their multifeatured junk
and start buying Kenwood and Icom only and continue the thinking that
prevailed in the period 1988-1992.

Or you can keep bitching that your 847s aren't up to snuff, the volume
control needs a factory mod to turn it down, the CAT is CRAP and your
FT1000MPs need 15 mods because they've been sitting in a warehouse since
1996.....

Perhaps because they have no lives, no wives, ignore their relatives in order
to be on the radio all day, they feel guilty and that is how they compensate
for their antisocial tendencies.

2084. Need information on old radios

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-24 00:00:00 UTC
From: john.w.little@cpmx.saic.com
Message-ID: <6rr8te$5o0$1@nnrp1.dejanews.com>
Source record: 163849

I picked up the following radios from a pawn shop and the owner had no information on any of them. For the most part theres little info on the net. If you have any info on the following it will be appreciated:

1. Pearce-Simpson Islander 80 transceiver (has freqs in 2Mhz range listed on front)
2. EGI Courier Fleet 30b (old CB apparently with some mods)

both radios work although I haven't tried to transmit on the pearce-simpson. I do know that it will receive on both the AM broadcast band as well as shortwave. FYI I paid $60 for those two radios, a heatkit wideband receiver and a cobra 29LTD Classic CB that was unused and sealed in the box. TIA.

John

The proven and effective techniques continue to be used over the ages. We still make sounds, created by exhaling air across our vocal cords, to communicate with those in close proximity just like our cave-dwelling ancestors. Pretty ancient method, eh? Don't you feel embarrassed emulating an ape?

>>No matter what freq'y you choose for phone or pactor, you're also on a
>>CW freq'y; for that reason alone you should know the code.

>No matter where you operate in the data segment, you're on a frequency
>(note I know how to spell the word) where PACTOR may be used too. For
>that reason alone, you should be equipped to operate that mode. Are you,
>Jeff? I didn't think so.

"Data segment"? That's a relatively new term for what what was formerly the CW segment. Once PACTOR anchors itself to become one of the top two modes on HF and knowledge of it becomes ITU-mandated, and it is allowed to be used on any HF freq'y, then we can ask everyone to purchase equipment for that mode. But I just can't see the ITU requiring all the world's hams to own a computer.* (Many of my South Pacific ham buddies are still asking what freq'y the Internet is on.)

Just as we're permitted to spell "cannot" as "can't" I choose to spell "frequency" as "freq'y." You had no trouble understanding it.

Don't ("do not") be too quick to congratulate yourself on your spelling - remember "LASER"? It's an acronym.

Jeff KH2PZ

*News item: Fewer college freshmen are choosing computer science as a major course of study; they're opting for the traditional majors (business, psychology, liberal arts).

Glen and Tom's responses where very informative, very UNLIKE your drool you no-name whimp. Glen outlined very well why SPEED CW should NOT be a large requirement or even a consideration. I guess the ARRL is dead on, they are not asking for CW to be removed, just the requirement for CW to be put into proper perspective. (i.e. its importance lessened) I can live with that.

Now stop cross posting into the Satellite group please.

And "if" you would have read my original message, I mentioned that if you want to do the COP thing then take the classes and become trained. I never have downed the "trained" person/HAM who wants to volunteer his time. The underlinging thing here is "TRAINING"..... The problem is most of the HAMs "don't" want to do the training, just want to get involved. Must be an ego thing.

Most of the HAMs I know sit through a 4 hour video and talk session on storm spotting and now they think they are experts. That is one of the reasons that we expect more than one report of a tornado before we confirm it to the weather bureau. If you want to get involved get the "Training". I sure that the members of the sheriff's posse have the training to be out there helping.

I am a HAM and also a reserve deputy sheriff. The process for certification to become a deputy is to do 560 hours of classroom and physical training, pass the state police officers test and when accepted to a department work with a training officer before being able to ride alone. Also to keep certification you need to satisfy a minium 20 hours of training every year. Of the 24 reserves on the sheriff's department I am on only 3 have HAM licenses. There being about over 1,000 Hams in the area I am not surprised that there are not more. They all wantabee but don't want to go through the "training".

Again what I am saying if you want to be a COP then get the training and
volunteer. Don't go out and get a radio that is capable of getting on the
police frequencies and a look alike police car so that you want everyone
to think you are a police officer.

Mr. Doug Leach, VP for the Radio Amateurs of Canada, did a detailed study of the regulatory history of Morse code. His research took him to two sources confirming that up until the early 1920's, the testing speed was five words per minute. He found the copy of the regulations that specified this speed, and the subsequent admendments which increased that speed to 10 words per minute. This five word per minute testing program was confirmed in a publication of the history of the amateur radio station located at Queen's University in Kingston, Ontario.

He undertook to make a similar study in the US at about the same period, but according to Leach, the regulatory documents are very spotty and often are non-existant because the regulatory body at that time was not the FCC but another agency or department and there was very little documentation preserved from the former regulatory agencies.

In summation, there is no hard evidence that would support Coffman's viewpoint. However, it could be extrapolated that it is unlikely that the US requirements were quite similar to the Canadian requirements, in consideration of a mutal concern of mitigating interference from the amateur service to other users of the radio frequency spectrum.

I am getting down to the short strokes on a large ham radio tower in Marlboro, MA at our repeater site. I have a permit for 180 feet of tower and have been working the issues on tower design etc. Looks like it will be a free standing structure.

Problem is I need a drilling contractor who can drill the holes for the legs of the tower. Anyone know any contractors who could handle some large holes 30 feet deep?

Huh? You sound like a real *first class* asshole!

Assuming the Communications Act of 1934 is still in effect, an emergency transmission takes priority over your police or sheriff department's "rules & regulations."

You are the jerk with an ego. Why would a citizen, who *wants* to save a life have to sit through 560 hours of classroom and physical training? I don't plan on capturing the armed suspect -- just reporting it so the *real* police (and not a RESERVE deputy) like you, so they can apprehend the suspect.

After reading your message I would call you if my cat were standed in a tree!

You appear to be a troll, as well as an idiot.

>
>Actually I am only about 65 pounds overweight.It's because I have big BONES

And three chins, four spare tires, and have gotten fired on every job you've
ever lied your way into, fatass. Why didn't you answer the question?

>for my size frame. Want my phone number now? I told you I am not taking the
>General Exam anytime soon so how would I know the answer. Maybe Dan will
>send me the answer real quick and I can pretend I knew all along. At least I
>am able to admit that I don't know much about radio yet.

OR anything else, evidently.

> What is your excuse? You've been driving the shortwave world crazy for three
>years at least with your Ms. Genius bullshit.

Well, fu#$nuts, I started listening to sw in 1965. I went into the USAF, had
soime schooling in radio there, got out in 1977. Was on 11-meters for a short
while, and sat for a commercial radiotelephone licence. All thios while you
were skill fellating mommy.

>> You've obviously never could afford a vacation trip to Europe. Since you're
>> just a minimum -wage pizza delivery boy the only thing you can afford is
>> getting your meals from the workplace, fatso.
>>
>
>I don't need to go to Europe. My great grandparents left there for a good
>reason.

I _knew_this loser hasn't even been outside of his town of Dunghole.

>Ever heard of Ellis Island you racist shithead?

Ever heard of punctuation, you illiterate bastard?

>And I am not a delivery boy, fuckface. I am a management trainee.

Testy little flunky, aren't you, fatboy?

> Pretty soon I will be
>assistant manager at one of our shops.

ASSistant manager is right, in more ways than one, slob.
I'll bet your coworkers puts a "Wide Load" sign on your back when you're not
looking, two ton.

>And you will still be doing nothing as a total leech. Air Force for 14 years?
>You lying sack of shit.

Get your facts straight, moron. I've _never_said I was in the AF for 14 years,
dimwit.
So it appears that YOU are the liar.

> That is as close to Europe as you have ever been.
>Listen shitwad, my family has been in the food
>preparation and hospitality business for over SIX generations.

Yeah, a whole family of fat , grubby, short order cooks and dishwashers.

>What have you or your family ever done. You say you went to college?
Bullshit.

Refute it with facts to back that up.

>You say
>you were in the Air Force? Bullshit. Grad School? Bullshit. Job
now?
>Bullshit. Career? Bullshit. You are nothing more than a whining little
>momma's boy with nothing better to do than fuck with people on the internet.

PKB, fatass. You better watch it you'll choke on a sandwich, Mama Cass!

>12,000 idiotic posts prove that. You know what? You are JEALOUS of the fact
>that I am a management trainee at Domino's.

Oh, stop, I can't laugh anymore.....<lots of gut-wrenching laughter>

> All that bullshit college you
>claim and experience you claim and you don't even have a job.

Bwhahahahahahahahahahahahahahahahahahahahahahahahahahahahahahahaha!
ROTFLMAO!!!

You'd better check the U.S. Copyright database before you run your mouth,
although your mouth is usually either filled with food or your manager's
manmeat.

>> Now, hahahahahahahahaha,
>> that is the height of ambition, to be a pizza shop manager.
>> Hahahahahahahahahahahahahahahahahahahahahahahahahahahahahahahaha
>> The acne-scarred geek whit trash's idea of success!
>
>Keep laughing cluck-cluck. But I have a job and I have a chance to be
>promoted.
Hahahahahahahahahahahahahahahahahahahahahahahahahahahahahahahaha
To what? Chief Pizza dough roller, doughboy?

I make more than minimm wage but I admit it is not a lot more. How
>much d.... As I said, my family has been in the
>food business for a long time.

You're repeating yourself, fat tub of lard.
So, what's your opinion of your fellatio abilities?

>We're good at it. I am good at it.

I thought so.

> I am proud to be a management trainee at Domino's.

Just like you were proud at the 3,000 other jobs you have LOST.

> Let's hear the some more bullshit about your musical career.
> I rally enjoyed reading that fiction till I
>checked it out. No membership. No BMI. No ASCAP. Nothing.

How do you "rally enjoy" something? Hahahahahahahahahahahahahahahahahaha!
Check the copyright database, if you can tear yourself away from the jumbo bags
of Doritos.

>Are you backing out of the wager, Ms. Wiseman?

You couldn't pay up, fatso, all your "money" has to go for food.

>> No, But I'm sure you'll gobble, gobble, gobble down your boss' manmeat
>tonight.
>>
>
>I am going to be gobble, gobble, gobbling a Sicilian Deep Dong Penis and some
>bread sticks from old customers that I rolled with my own two hands
> Better hit the books or just back out now and admit you
>don't have 10 bucks. Come one, surely you can pinch another 10 bucks from
>Momma Wiseman's purse. You've been doing that all your life.
> How does it
>feel to be middle aged and alone with Momma?

Bwhahahahahahahahahahaha..You still haven't gotten laid. You couldn't get laid
in a cheap whorehouse with a platinum Visa card. Your'e that FAT and UGLY. No

woman would want a roll in the hay with the Pillsbury Doughboy. Oh, and btw, I don't _have_to steal_money, which is more along your avocation, pizza boy.

> I'd rather be a Management>Trainee than in that situation. At least I have a nice >work environment and lots of good people to keep me company. I'll bet you wish >you could have the fun we have.

No, I'm not into homosexual sex.

> Ever wonder what REALLY goes on those pizza's to make them so
>good?

Please, the thought of your greasy, unwashed hands preparing pizzas right after scrubbing the toilets is distasteful enough.

>My English is not substandard for my level of education.
> It is average for my level of education.

Perhaps, since you've got the highest education in your family.

>However, yours is highly deficient for someone making
>a claim that he attended "grad school".

What would a high school dropout know about grad school?

And I was not ill educated. I never
>missed a day of school due to sickness until the 11th grade which was my last
>grade in formal education.

HAHAHAH

> So, have you passed your GED yet or is that
>another bet you won't take, Ms. Cluck-Cluck?

Stupid, I don't have to. I know your intelligence level is comparable to an brain-dead corpse, but I finished High School and received a diploma. I did wait and go back to college later, and recieved a B.A. I did attend grad school, unlike you, flunky.

>> You have to get somebody to _do_what you _cannot, eh?
>
>I take that to mean you are backing out on<...>
>I...BWAAAAAHAHAHAHAHAHAHA. The boys over in alt.flame are rolling already >on this one. Their pet punch boy, Ms. Cluck-Cluck, who couldn't find $10 in his >mother's purse. Now get out of my sight <click>

No, fatboy, perhaps the lard has gotten into your brain cell. You need to get others in on this because _You_ can't hold their own. Maybe on a couple of large pizzas, consuming one by yourself, but with debate, you're a beached whale.

and
> sounds great. On a 1 to 10 scale this one is 9.8 Would you be interested
in
> a trade. The value of the radio is around $750 ... William Lee

William:

I bought my Ten Tec Corsair II sevarla months ago for just over $400.
and then saw them posted for less than that with filters and the matching
power supply (mine had neither), has something happened that has escalated
the used value by over $300.?

I would have loved to have gotten $750. in trade value out of mine! I
heard that collectors inflation is puffing prices, but I didn't know the
Corsair II had become a collectable. :-(

Check out the Special Features section of the new W8MMQ web site! We feature different amateur radio articles, relating to various topics.

Currently, the topic is "Free Speech", and how it relates to amateur radio. Please feel free to comment on the subject. There will be a site with all of the comments that visitors to the page have submitted.

And, if you have an article you would like to submit, please do so! I will review it, and consider it for the Special Features section!

Check out the site at http://www.qsl.net/w8mmq/ and choose the Special Features section on the second page. Thanks!

In this group, either a callsign or a name is generally considered good practice and ettiquette, especially if you make unfounded, innapropriate, potentially offensive, or controversial remarks.

Got my new service connected, and my "grown-up" newsreaders all working satisfactorily, complete with a lot of nice features I didn't have on aol like killfiles. So, without further adieu.....

PLONK

You lose again, and for the last and final time from my standpoint.

Your MNMANIAC name is not plonked, because you usually behave yourself when you use that name. Also you are not blocked on my email. But I won't be troubled by posts from your CB Rambo name or your LIBNET name.

Isn't UseNet Great?

Said dwelling appears to be an old one story farm house with very
faded red paint. The dwelling appears to have been the victim of a
highway widening project several years ago, as it now sits approximately
six feet from a very busy two-lane highway. Residents of this dwelling
apparently enjoy the sounds of heavy traffic, day and night. Two very
long and deep skid marks were observed in front of the dwelling, as if
someone left or arrived in a hurry. There is no garage, only a rusty
carport shelter. Antennas of every description are on and around the
house, verticals, long-wires, etc. At least two antennas appear to
have been pulled up in trees by means of rope, where they swing in the
wind. A DBS dish was in the back yard. The grounds were very poorly
maintained and need of landscaping. Two vehicles were in the rusty
carport, one red Ford T-bird and one black T-bird. The black T-bird has

a busted out passenger window. Both vehicles appeared to be in poor condition

Grab one new for the close-out price of $150. Maxon has, quite unfortunately, discontinued the 210+3 - in favour of a unit that is NOT as capable for serious GMRS operations.

Those who use them will not be parting with them for much less than a new one...they were the first honest-to-goodness serious GMRS HT to be made abailable for less than $500. bucks that was worthwhile...You can purchase three 210+3s for the price of a single Icom U-16, for example - and not have as easy to use HT than the 210+3.

- Clint Bradford

2150. Can I operate a handheld in an airport?

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-25 00:00:00 UTC
From: someone@domain.com
Message-ID: <35e252a4.6506334@news.isat.com>
Source record: 163687

I know that I am not allowed to operate a ham radio in an commercial airplane. But I can't remember what the rules say about operating on airport grounds or in a terminal building? Can I use my 5 watt 2-meter/70-cm handheld in the terminal building while waiting for my plane? It sure would be a neat way to kill some time. I see people using cell phones there.

It's legal, but my experience has been that airport terminals seem to be
very good RF insulators, I think the cell phones work because there are
usually recieve sites close by.

Huh? I haven't a clue as to what this guy is going on about. Our bands overcrowded!?!?!?
Try 2m ,1.5, and 70 cm in the NY/NJ metroplex. You can go for days without hearing a single QSO . This had better change pretty damn quick, or all of us will be on the outside looking in on what used to be OUR bands , and the cellular, pcs, and beeper
comglomerates will be looking out at us, grinning like a fucking cheshire cat, and giving us the finger...

I am a volunteer fire department member as well as an EMT and a fire policeman. In my training, both as an EMT and fire police, I have always been told that, IN AN EMERGENCY, any means of communication is acceptable, whether it be a ham radio, a police handheld or otherwise. (No, I am not a licensed ham.)

Jim,
Very well put. All of my operating is on
CW and it will be the ONLY place to be if HF
access is gained by the no code types. There is
already enough rude behavior taking place on ssb,
and judging by some of the comments here, it won't
get any better. Maybe a no coder will become interested
in CW but then they will complain that the DX operator
is going too fast (can't recognize their own call) in a
CW pileup (if DX'ing) or the operator is going too fast
if contesting or maybe the other operator is going too
fast if in a casual qso. Hell, anybody can talk.
See you on the bands.

BZZZZTT!! Wrong answer, but you're invited to come back later and play
"I'm An Idiot!"

The trunking systems were built and designed for EFFICIENCY. Many
repeaters are required for the systems to work properly, and many have
been disasters!

Another fantastic feature is the ability to monitor and track those
officers who enjoy sitting in donut shops all night, or taking naps.
They can see if your car is moving.

But, try again!

>which such a licensing speed gave full privileges.

Amateur licensing started in the US in 1912. From 1912 to 1913, no code test at all was required. From 1913 to 1917, a code test of 5 WPM, or a statement certifying the applicant could receive Morse (if the applicant resided more than 50 miles from an examing point), was required for a license. When amateurs were allowed back on the air after WWI, a code test of 10 WPM was instituted.

The code test regulation spelled out the reason for the code test. It was to be able to recognize a distress signal or a cease and desist interference signal. In the early spark days, commercial and military operators were forced to send slowly due to equipment limitations. With the advent of more "modern" equipment, commercial and military operating speeds increased, so the amateur test speed was increased too, though no real justification for that was given since there was nothing to stop the commercial or military operator from slowing to 5 WPM to send a cease and desist signal to an interfering amateur. (Of course this legitimate original reason for Morse speed testing is moot today since commercial and military operators no longer use Morse, either at all, or at least not on spectrum shared with amateurs.)

Later, a series of graduated speed tests were instituted with the stated purpose of restricting phone, RTTY, and even ATV(!) activity (see _200 Meters and Down_). This Disincentive Licensing program was urged by the ARRL, who maintained that phone, RTTY, and even ATV activity was undesirable because it promoted socializing between amateurs on the air. Therefore such activity should be discouraged by requiring those wanting to use phone/RTTY/ATV to pass a faster Morse test. (Interestingly, the author of _200 Meters and Down_ stated that in 1936 amateur radio technology was perfected and any possible advances were far in the distant future. Where have we heard that same argument lately?)

It was also claimed that HF phone could only support a maximum of 16,000 amateurs, so access to phone had to be restricted, and faster Morse tests were to be that restriction. Of course that idea was all wet, as we know today. They neglected to account for technological advances which today allow more than 365,000 US amateurs to use HF phone. That same desire to misuse Morse testing as a disincentive to access to operating modes other than Morse persists today among a certain subset of amateurs.

Therein lies the "stake thru the heart" of the PCA claims
and handwringing. As well as a justification for totally
dropping Morse testing. There is NO justification for NOT
using Morse, just as there is NO legitimate justification
for Morse TESTING.

Hello. I'm interested in finding an old QSL card of the station K3CQX. His location was Silver Spring, MD. If you have one, I will offer a reward for it. This is what I know about him:

-He had a General class license
-He had a DX-100, SX-99, 40m Diapole, 20m Diapole, 10m/15m beams
-He mainly opperated CW, but sometimes AM voice
-He lived in Silver Spring, MD near Montgomery Blair High School
-His name ws Tony, or Antony
-His call was K3CQX (stayed the same, he never upgraded)
-He was in high school/college at the time

This is all very true. In an emergency, all bets are off. You nay use whatever means are at hand and necessary to send a distress or emergency message.

There are a few wrinkles in this concept though... I am thinking of a case in CA a few years back... QST printed notice of this and I think a couple of updates. It seems that a ham had his HT programmed for a couple of local law enforcement channels, and got into some jam off in the bush... Maybe it was a broken leg, I don't remember. Anyway, I guess he called on a ham freq. or two, and then tried a police freq.. Well, a bunch of people got their noses out of joint over this, and I will not take sides on whether he was right or wrong to do this, but the feds messed with this guy rather badly, and it was touch and go on whether he would have to pay some bucks and maybe lose his license. The position of the FCC seems to have been that programming his rig for police frequencies in the first place constituted intent to use those freqs at a later date. I think they did take his HT. Maybe somebody remembers that article better than I do and can refresh our memories. Anyway, I think the assumption should be that you will get hassled badly for operating on public safety systems without authorization, emergency or not, and if the emergency warrants you accepting the fact that you will get hassled, then of course you will use those freqs. If your emergency involves life and death, obviously a fine and losing your license are pretty small potatoes, and you will use the freq. since it is the lesser of two evils. If the emergency is something like you ran out of gas on the highway, consider the gravity of the situation you are in versus the gravity of the situation you might be in if you use an unauthorized freq.. Weigh one against the other. Because whether you consider it an emergency or not, somebody else might not, and especially if Uncle Charley points out that you had privileges on other usable freqs, you COULD INDEED find yourself in a bad situation. So, assume the worst will come out of your emergency transmission, weigh it against the emergency, and do what you gotta do knowing and anticipating the possible consequences both to yourself and to legal users of the system and the people who depend on them.

"That's all I got to say about THAT."

Dear YL's and OM's,
a friend of mine will go to DU/..... (Guinea) next year
and will be QRV from there over a longer period. Now
he's looking for any information and experience reports
about small, mobile SW-Transceiver like IC-706, DX-70 etc.
I would appreciate it very much, if you can send me any
experience reports (good and bad), I 'll QSP to him.
txn in advance, vy 73, Franz, DD3FMA

Excuse me!! You need to read a little better. Did you flunk English comp.
No where did it say anything about trunking. I will say it again "agencies
are going digital encripted transmissions" to keep no nothings like yourself
off of these systems.

Think you need to go back to basic English class and get a life.

>The trunking systems were built and designed for EFFICIENCY. Many

Unfortunately hams think they can do anything just because they have a
"ham" license. Now ask the FCC and they will tell you that it does not mean
that you can transmit on a communications system that you do not have
authority or a license. Re-read part 97.403 and ask an FCC field engineer.

Ahh, yes, more ass kissing by the Nawth of the Sowth in times of need. Why is it that when New England got shelled by Hurricanes Gloria and Bob, that WE didn't get frequencies set aside for US ? The storm hasn't even hit NC yet and they've comandeered a little under a dozen HF frequencies for their LOCAL traffic !

Furthermore, everytime these people have a gust of wind they get federal tax dollars to aid them, but the Nawth always GETS DENIED when our governors apply.

Either they whine better in the Sowth or they better learn some better construction techniques soon.

A Rotten way of Radio Relaying, that's what it is. Equal rights for all, special privilege for none.

It's not somehing I've ever seen, though I don't use packet. The RF
connector would imply that it's got a radio built in. But "packet" is not
just radio, so it may be some network interface and the RF connector is
for feeding the network cable. The type of connector might be a help.

You might want to ask the question in rec.radio.amateur.digital.misc
where there might be someone who knows about it, either because they've
used it in ham radio or have come in contact with it in a professional
capacity.

When describing something, it helps to provide as much detail as possible.
Where did you find the units? Is there a manufacturer's name on it? is
there a date code? I guess the connectors aren't labelled. Have you
opened them up? What numbers are on the IC's, the large ones in
particular. These details may not help you figure out exactly what the
unit is, but the more detail you provide, the more likely that someone
can tell you whether or not it has an amateur use.

2195. Cross-band repeat with TM-V7A

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-25 00:00:00 UTC
From: Bruce Barnes <bruce.barnes@unocal.com>
Message-ID: <6rv2b6$daj@news.unocal.com>
Source record: 163732

Anyone really know how to set up the Kenwood TM-V7A for Cross-band repeat?
I think the instructions in the manual are wrong. It says to select the two
frequencies on the two bands, then hit the Cont Sel button. This enables
the Control feature. The instructions then say to hold one of the frequency
selection knobs while turning on the radio. This only sets up a one way
cross band function.

Like I said, I think the manual is wrong.

Thanks in advance,
Bruce

Hi,

Now we are agree that saving lives is more important than the law.
Anybody care to tell me how I can transmit on the Police frequencies?
According to PerCon, my local frequency is 460.2325. I can receive
their conversation, but they cannot hear me on my hand held portable
radio.

What's the offset on their UHF freq? Tone?

thanks

ARRL Bulletin 60 ARLB060
From ARRL Headquarters
Newington CT August 25, 1998
To all radio amateurs

SB QST ARL ARLB060
ARLB060 Hurricane and storm Bulletin

The National Hurricane Center reports that a hurricane warning remains in effect from Murells Inlet, South Carolina, to the North Carolina/Virginia border. As of 1500 UTC, Tuesday, August 25, 1998, Hurricane Bonnie was located near latitude 29.5 N, longitude 75.2 W, moving north-northwest at 16 mph.

More than a quarter of a million residents and visitors have been ordered to leave North Carolina's Outer Banks.

The Hurricane Watch Net will operate on 14.325 MHz. All stations should remember this is a directed net. Do not transmit until invited to do so by the net control station. Hurricane Watch Net members will provide ground level meteorological reports to the National Hurricane Center on 14.325 MHz.

ARRL section officials in the affected areas have announced the following net frequencies in anticipation of possible emergency-related traffic. South Carolina: 3.915 MHz; North Carolina: 3.923 MHz (7.232 MHz alternate); Virginia: 3.910 MHz (7.260 MHz alternate), with health-and-welfare traffic on 3.947 MHz (7.240 MHz alternate).

North Carolina Section Manager Reed Whitten, AB4W, reports that North Carolina's Amateur Radio Emergency Service (ARES) has been asked to activate. An Amateur Radio station is being set up at the National Guard Armory in Kinston to provide backup communication for the state Division of Emergency Management. An amateur station at the state EOC in Raleigh, North Carolina, will be staffed within the next few days.

Regarding using Ham radio to call on police freqs:
I recall a case in Ct maybe 15 years ago when a ham, also a radio news broacaster found someone in distress (drowning I believe) and placed an emergency call on the police freq. I believe as a result the person was saved (I may be wrong about) but then the feds prosecuted him for illegal transmission.

DOn't recall if he was convicted.

Bob Hagen

You Don't. Unless your a Police officer or emergency official you are not allowed to transmit on their freq... You can get arrested and in trouble. It is not illegal to listen but it is to transmit on the freq... that is not registered to you. Sorry but that is life

This is very good and accurate advice. I'm going thru the same thing myself, that is I'm new at CW and want to get on QRP and learn how to operate with CW. I was going to build a QRP xcvr kit from Ten Tec too. Luckily I found out early on that in order to work QRP one has to pretty good at CW and also be very familiar with the bands and their characteristics. There was no way I felt I would be able to compete, so I changed my mind and bought a previously owned Ten Tec Triton IV instead. The Triton is what I am learning with - at abt 100 watts there are all kinds of contacts and experience to be had. Some of it is even as bad as I am with CW :) But the point is I'm getting lots of good experience at 100 watts. When I get good enough, I can crank the drive down on my Triton to 5 watts and try QRP. The more contacts the faster you learn. I'm not pushing used Ten Tec equipment, there are lots of alternatives, as anyone on these newgroups knows. But I do recommend you practice and learn at 100 watts and get all the experience you can, then move on to QRP. Anyway, its something to think about...

This certainly was a "strange" exchange of mis-information. Item one,
the police/commercial user's will ALL be using a PL (private line), tone
guard, CTCSS or whatever you want to call it. That mean's unless you
know the subaudible tone, you can't be heard through the system.

In any real emergency any agency/citizen can use whatever means is
at their disposal to summon help. That in itself does not give joe
or jane ham authorization to use a police radio frequency. I think a
good case of common sense would rule the day here.

Does anyone know of a better belt clip for the Q7A. The stock one has to be the worst one I have ever seen.There must be something better. It makes the radio almost twice as thick. Surely one could be made from spring steel. I hear they came up with a better one for the Yaesu VX-1R.

Dear Eli,

Welcome to Amateur Radio!

I don't have the particular TenTec kit you have, but I have built two of their 6meter to 20 meter transverters, and I can say that the information given you by the other posters is very accurate.

Furthermore, if you haven't assembled the kit yet, you will find TenTec's quality to be every bit as solid as their "big gear".

I especially recommned that you get a decent straight key until you get fast enough for a bug or keyer. Nye-Viking has a nice one in the HRO and AES catologs, and is an item you'll always enjoy having, even if it get's relegated to "showpiece" status later in your ham career!

Hope to work you on the air sometime!

I don't think there are any regs against using a HT on the ground, in the terminal. I can't imagine it being illegal, provided your tranciever operates without excessive spurs (as all unmodified FCC Type-approved trancievers are). I've used a scanner in terminals numerous times, and a HT a few times. - Besides, busy airports are crawling with people using portable radios of every variety- police, fire, ramp personell, terminal security, airport personell, taxi cab drivers, delivery personell... etc.

> --
> Alan
> WA4SCA

Look for rubber grommetts. They can be low on the firewall sometiems..
and high on the firewall sometimes. Most cars (especially japanese cars)
have nice convenient grommet-covered firewall holes. Sometimes they are
easier to find from under the dash... sometimes they are easier to find
from under the hood. A lot of times, you have to pull the carpet way
down, and trim the rubber covered matting.

If you can't find a good grommet, you can go through the existing wireing
harness/bulkhead. Many cars make it easy to punch through that rubber
grommet.

If you have an automatic, many cars have the hole for the clutch there
already, and covered by a plate. That is a very convenient place to
drill.

A lot of times you can't see the hole you need... but you can find it by
feeling around down below things in the firewall, or under the dash.

As a last resort... drill it. I've drilled many cars without a problem.
But I have heard the rediculous stories of other people who used to
install mobile electonics such as:

-cell phone trunk unit- drill thru gas tank
-cell phone mount- drill thru transmission, drill thru a 1/4" dia. $1400
fuel line in a brand new Jag., drill through wiring harness (unpredictable
results)
-Going through the firewall- puncturing the brake system, getting wrapped
up with stuff.
Simple advice that even people who do this for a living dont follow-----
look what you are drilling thru first, and don't let the drill just punch

violently free when you get thru. It's better to use an adjustable speed drill... or even better- a unibit. The unibit is an excellent tool for this task. Be sure to use a grommet so the wires don't short out due to friction against the metal hole.

Good luck

thekat@san.rr.org (Bud) wrote:

>>according to the Communications Act of 1934, you may use ANY MEANS
>>possible to save life or property.

Without respect to anyone's personal opinion, the Communications Act specifies that in a dire emergency (and that is defined as an immediate danger to life and property - the classical use of "MAYDAY" or sending an SOS in CW) the normal rules are suspended so that radio equipment may be used to obtain help.

>>The Communications Act of 1934 overides *any* local or state law.

True. Be prepared to defend that posture in court if you DO use something you normally shouldn't despite your intentions or immediacy of need.

>You obviously have 'selective memory'. The FCC says you can NOT use a
>radio system that you are not licensed to use...

Under normal circumstances- unless you are in immediate danger of losing your life or property.

>... If you have a Ham license,
>you can use ANY _Ham_freq, even one you do NOT have privileges for, but as
>a Ham, you can NOT use a Police or Fire Department radio system and expect
>to not have SOMEthing done, at the least having your radio confiscated. If
>you fight THAT, you'll probably face other charges.

The charges you'd face are those of posessing equipment that has been illegally modified to transmit out of band (by the Commission) and/ or interfering with the duties of an official (by the local entity). NOT breaking part 97. The rules do not specify what frequencies and modes you can and cannot use.

The premise is that you SHOULD NOT have equipment capable of transmitting on these frequencies unless you have written authorization from the licensee, and then you must stay on the channels allowed on the license. Even so, a modified ham radio is not type accepted for use outside of CAP and MARS and should never be used "out of band" where it is illegal. Now here's a controversial parallel: let's say you buy a semi-automatic rifle, which is legal where you are. For whatever reason you modify it into an automatic, it's illegal. Similar (with a different impact, of course).

I can't underscore this enough - - It is still NOT A GOOD IDEA to go where you are not expected (even if you are a volunteer with a type accepted radio, like a GM300, etc.)!!!

Get local people together to listen to certain ham frequencies (146.52, 52.525, 446.0, etc.), 2182 kHz HF maritime calling/ distress, 121.5 aviation distress or 156.8 MHz maritime VHF calling/ distress, start a program with police or park rangers, like REACT so that you have a partnership where they know what you do and can call on you if they need your help (that happens sometimes) and you know who to call directly (NOT on the radio!) if you hear a distress message, but don't go where you are not expected unless you are alone and are most certain you will die if you can't get help (that's why this exemption exists- not to call in disabled vehicles or suspicious persons, etc.)!!! Many hams have tested the Communications Act of 1934 and many local/ state judges believe they are empowered to administer this law. You'll lose your equipment and, if your lawyer is not skilled at communications law (who is except an ARRL volunteer counsel or a "wireless communications raider"?), you may be locked up for a while until you appeal in Federal court.

There was an unfortunate case in NJ where a young man who is a ham was suspected of interfering with police operations on their frequency. While he ultimately proved this was not the case in court, his reputation was drawn through the mud, he was deprived of his equipment, he ran up a LARGE amount of legal fees and he probably has a damaged view of his local authorities because of a misunderstanding.

All I can say is, "Think before you talk." Proving you are right will cost you time, money and create a lot of undue animosity.

Steve (KA2AYR)

BTW: What do you all think about a system where a VHF or UHF ham radio can be placed in a PSAP, be the responsibility of a licensed amateur and is normally muted and disabled but opens up and allows a dispatcher to communicate if someone dials 9-1-1 on their keypad? Such thing could be sponsored by the local amateur club and this SHOULD allow direct access to emergency communications without ever making an issue of coming up on unauthorized frequencies???

Hi all,

I'm using a MFJ 1278 tnc for VHF aprs. My HF rig is a FT-747. I've got them situated as far as possible apart on my desk, but still I'm getting quite a lot of intereference from the TNC. If anyone has any situations that might help me, I'd appreciate it!!

73,
Rick

T T S S T T

I don't believe that's correct. =:o

The prosign 73 is correctly pronounced "seventy-three."

2218. WTB: Programming hardware for Yaesu/Vertex portable

Hi All,

I have just spent over an hour making at least a half dozen calls across the country. You'd think that in that amount of time i'd be able to find a company willing to sell me the VPL-1D programming kit for the FTH series portables and the VXR series repeaters. Most of the companies that I spoke with said that they can sell this kit to adresses in their own state or export only. I have been unable to speak with the Yaesu rep. that covers Utah(based in Denver, go figure?).

I have 12 of the FTH-2009 radios and I need the programming cable and software. Anybody have pinouots for the cable? Can anybody help me out?

After today, I am of the belief that Yaesu software is harder to obtain than Motorola RSS.

Thanks in advance!!

Dan Dialogue

You will have a hard time providing a citation of the law or regulation under which you could be charged for merely POSSESSING such equipment. There is no such law in the USA, and legal problems could only occur if possession of such equipment was supporting evidence in a case charging illegal usage.

Every ham rig that can be modified for MARS/CAP is capable of illegally transmitting on non-ARS, -MARS, or -CAP frequencies. Can the Radio Posse round up all the hams with MARS/CAP mods and claim they own an illegally modified radio?? Can a mis-guided ham who, using a radio legally modified for MARS, transmits on a public safety frequency then be charged under some law for simple possession of an illegally modified radio? NO, because there are NO such laws, save against those engaged in the MANUFACTURE of such equipment under certain circumstances.

Why did you make this claim???

> The premise is that you SHOULD NOT have equipment capable of
> transmitting on these frequencies...

Whose premise, since there is no law prohibiting this??

The capabilities that I choose to enable or add on to my personal-use radio equipment is my concern alone. However, I agree it would be gross stupidity to ever, ever use such equipment on frequencies where it is not welcome. I think it is evident that the ham who did so in San Diego County, CA, did so needlessly, almost as if he were waiting for an excuse to try it out. And public safety frequencies are not the place for over-enthusiatic radio operators to crowd and confuse with their "emergency" reports of highway fenderbenders et al.

OTOH, a poll of equipment used by MANY MANY public safety volunteer organizations (fire departments, rescue squads, etc.) would reveal a large amount of ham equipment modified for use on public safety channels.
Let's hope no one starts a self-righteous crusade against this until it is shown that a problem is actually resulting from such "gray-area" usage.

Regards,
Mike-M

To all who wants to know it !

As we are awear of, Nostradamus predicted that in the year 1999 in the 6th month
his highness Mr. Death should come down in the service of peace !

I put my head on the block and states this one :

June 1999 will a tremendous solar flare occure, with both x- and gammarays far beyond
levels yet measured on earth.
Something that will make the blow that wiped out electricity early 90ties look like
sparkling from a ignition-coil !

The sun is just "warming up" now......

Well, just going by the math, if the formula for Rout is correct (Rout = Sqr(Vcc - Vcesat) / (2 x Po) = 101 Ohms), then assigning 0 to Vcesat (best case) results in:

Sqr(5) / (2 x Po) = 101 or Po = Sqr(5) / (202) = .0111 W = 11 mW

Is this close to what you're actually getting?

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 25/2330Z AUGUST 1998 BY IPS RADIO AND SPACE SERVICES
FROM THE AUSTRALIAN SPACE FORECAST CENTRE
SUMMARY FOR 25 AUGUST AND FORECAST FOR 26 AUGUST - 28 AUGUST
STATUS INDICATORS SOL:** YELLOW ** MAG:** RED ** ION: ** RED **

1A. SOLAR SUMMARY
Activity 25 Aug: Low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number for 25 Aug: 122/75

GOES satellite data for 24 Aug
Daily Proton Fluence >1 MeV: 5.7E+06
Daily Proton Fluence >10 MeV: 1.5E+05
Daily Electron Fluence >2 MeV: 2.60E+07 (normal)
X-ray background: B4.1
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
26 Aug 27 Aug 28 Aug
Activity Moderate Moderate Moderate
Fadeouts Possible Possible Possible

Forecast 10.7 cm flux/Equivalent Sunspot Number for 26 Aug: 120/72

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth 25 Aug: Quiet to unsettled

Estimated Indices 25 Aug : A K
Learmonth 8 3322 212-
Fredericksburg 8
Planetary 10

Observed Indices 24 Aug : A K
Fredericksburg 9
Planetary 11 1332 3323

2B. MAGNETIC FORECAST
Date Ap Conditions
26 Aug 35 Initially unsettled, then storm levels expected
after 1300UT.
27 Aug 55 Storm levels
28 Aug 20 Active to unsettled levels.

COMMENT: IPS Geomagnetic Warning 29 was issued on 25 August and
is current for interval 26-28 August. Storm activity expected
26-28 August due to X1 flare at 2214 on 24 August. Culgoora radio
spectrograph data indicates two shocks may be associated with
this event.

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band
Date Low Middle High
25 Aug Normal Normal Poor-Normal
PCA Event : Began 0100UT 25 August, still in progress

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
26 Aug Normal Normal Poor
27 Aug Poor Poor Poor
28 Aug Normal Fair Poor

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
25 Aug 80

Observed Australian Regional MUFs:
near predicted monthly values

Predicted Monthly T index for August: 83

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
26 Aug 80 near predicted monthly values
27 Aug 40 30 to 40% below predicted monthly values
28 Aug 50 15 to 20% below predicted monthly values
COMMENT: IPS HF Communications Warning 51 was issued on 25 August
and is current for interval 26-28 August.

<john.w.little@cpmx.saic.com> wrote:
>1. Pearce-Simpson Islander 80 transceiver (has freqs in 2Mhz range listed on
>front)

Prior to the mid-70s, coastal maritime communications were conducted
in the 2-3 MHz band using amplitude modulation. Privately-owned boats
and commercial ships all shared the various channels in that range.
2182 kHz was the calling and distress freq'y, monitored 24/7 by the
U.S. Coast Guard and all other shore stations. Two silent periods
per hour on that freq'y had to be observed by all operators: minutes :00
to :03 and minutes :30 to :33; during these two periods all routine
transmissions world-wide were supposed to cease; this insured that any
vessel in distress would have a clear channel with hundreds of ears
listening. These two 3-minute periods were outlined in red on ship-board
clocks. Other channels existed for ship-to-ship, ship-to-shore comms,
including channels for working the marine telephone operator.

That band become practically useless - too many ships, fishing boats,
and pleasure craft all using AM in a band in which skip conditions are
a nightly occurrence. (In Monterey CA we'd hear the drunks in the Mexican
fishing fleet singing to each other night after night on 2182 kHz; they'd
use their Auto Alarms as toys.) Thus, the ITU members agreed that
1. AM would be phased out in favor of SSB (about a five years process
in which shore stations went from AM (DSB with full carrier) to DSB with
reduced carrier, then finally to SSB),
2. A new VHF-FM band would be created for true coast comms (no skip
[except during tropo ducting, of course!]).

The transceiver you bought can easily be used either on the 160m
or 80m amateur bands. It's illegal to use on the 2-3 MHz maritime
band since only SSB is permitted down there now.

Announcing:

."Hamfest INDIA '98".

To be held in Bangalore, South India.

Bangalore, high tech and ham capitol of India, is proud to host this hamfest in the
75th Year of Amateur Radio in India.

1500 hams are expected to attend this three day event. All foreign hams are
welcome and encouraged to attend.

2nd Oct. 2pm Registration.
3rd Oct. 10am Doors open, technical meetings, exhibits, etc.
lunch and dinner included.
4th Oct. Planning meeting and closing of hamfest after lunch.

Activities during the hamfest will include exhibition stalls where
manufacturers in electronics and other related products will
display their wares.

The registration fee is Rs.200/- This is about $5 U.S./

If any one needs assistance booking hotels,
sightseeing trips, etc., we can help.

For more information visit our web site at:

http://www.angelfire.com/in/hamfestindia98/

or contact:

- VU2LU, Ramesh, vu2lu@hotmail.com (India)
- WA5VPW, Jim, jpfin@worldnet.att.net (United States)

73 and hope to see you in Bangalore in October!!

Possibly he doesn't have any.

Friends... or brain cells... take your pick. So he would not know.

Why not do what I did, Dan? PLONK ol' Drew into the killfile.

2241. ALERT: Solar Proton Event Alert at > 10 MeV

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-25 00:00:00 UTC
From: oler@holly.cc.uleth.ca
Message-ID: <6rt95a$7034@mars.online.uleth.ca>
Source record: 163834
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.misc

/\

SATELLITE PROTON EVENT ALERT

ISSUED: 00:10 UTC, 25 AUGUST

/\

A > 10 MeV PROTON EVENT IS IN PROGRESS

ATTENTION:

Solar proton densities exceeded the event threshold of 10 pfu at
greater
than 10 MeV at 23:55 UTC on 24 August. This event followed the eruption of
a
large class X1.1 solar flare from solar active Region 8307 at 22:12 UTC.
Protons at greater than 100 MeV began arriving near 22:40 UTC on 24
August.
Densities at greater than 100 MeV have been climbing since then.
Currently,
protons at greater than 100 MeV are increasing to near 3 pfu and protons
at
greater than 10 MeV are increasing above 20 pfu.

Polar cap absorption levels are also beginning to show signs of
increasing. We expect PCA to become strongly enhanced and very likely
reach
event levels of at least 2 dB over daylit paths during the next several
hours. Radio communicators using ionospheric propagation are alerted to
expect significant degradation in polar and high latitude signal path
propagation over the next several hours, lasting potentially through much
of
25 August and possibly part of 26 August.

Peak proton densities at greater than 100 MeV are expected to max out
near 3 pfu. The peak at greater than 100 MeV should be observed within the
next hour.

Peak proton densities at greater than 10 MeV are expected to continue
to
climb for several more hours and reach a peak density in the neighborhood
of
30 to 100 pfu. Thereafter, a slow decline is anticipated over the next 48
hours.

For a potential terrestrial impact assessment, consult our Major
Solar
Flare Alert, to be issued within the next couple of hours after sufficient
data has been analyzed.

** End of Alert **

FYI. Los Angeles Sheriff has maintained a repeater system on 2 meters, 220 and I think 440 for a number of years staffed with a ham to relay highway traffic and other emergency calls to the sheriffs radio room next door. It is all part of the RACES effort in LA County. Nest best thing to a PSAP.

My local club maintains a 220, 440, 1296 phone patch with dial up access to the local PSAP but yes, you do need to know what freq, tone and procedure.

My personal preferrence is my unactivated cell phone. Got it for free when a buddy went digital and by Calif. state law all cell phones, active or not, must dial 911 for free. All it costs me is the juice to keep it charged. <G>

If you don't have permission, and you can't figure out how, leave it
alone,
even if you had the info, you don't key up on a pd freq. to test it!
you could interfering with a life or death situation.

I have avoided this by bringing the wires through the floor, hiding the wires at a spot not easily seen such as near the side wall or under the seat and then under the carpet. you may require a few extra feet but unless you are running exceptional power this won't be a problem.

N8BLK >>I am working on installing a rig in a '96 Honda Coupe. However, I am

All hobbies have their jargon and ours has been picked up over the years. And like the English language it's always changing. There are always language cops around that don't like Q codes on voice ect. but they certainly don't hurt all that much and hams have been doing it for 50+ years. So do your own thing and don't worry about being politically correct, after all it is just a hobby......

Scott Dickson wrote The topic was whether or not
>certain operating practices were proper, such as the use of the "Q"
>signs on phone, and following one's callsign with "for ID". It became
>evident that each person had a particular 'pet peeve' regarding
>operating practices.

From ARRL Headquarters
Newington CT August 26, 1998
To all radio amateurs

SB QST ARL ARLB063
ARLB063 Directors, vice directors face competition

Two ARRL directors and five ARRL vice directors face competition this fall for their seats on the ARRL Board of Directors. The contests are in the Central, New England, Northwestern, Rocky Mountain, and West Gulf divisions.

* In the Central Division, for two-year terms: The candidates for director are incumbent Edmond A. Metzger, W9PRN, of Springfield, Illinois; Richard David Klatzco Jr, N9TQA, of Lincolnwood, Illinois; and Henry B. Ruh, KB9FO, of Crown Point, Indiana. Running for vice director are incumbent Howard S. Huntington, K9KM, of Hawthorn Woods, Illinois; and Mike Hoshiko, W9CJW, of Edwardsville, Illinois.

* In the New England Division, for a two-year term: The candidates for vice director are incumbent Michael Raisbeck, K1TWF, of Chelmsford, Massachusetts; and Andrea T. Parker, K1WLX, of Jeffersonville, Vermont.

* In the Northwestern Division, for a two-year term: Running for vice director are incumbent Greg Milnes, W7AGQ, of Hillsboro, Oregon; and Mary E. Lewis, W7QGP, of Seattle, Washington.

* In the Rocky Mountain Division, for a three-year term: The candidates for vice director are current Director Marshall Quiat, AG0X, of Denver, Colorado; and Marvin C. Zitting, W7MR, of Salt Lake City, Utah.

* In the West Gulf Division, for three-year terms: The candidates for director are incumbent Jim Haynie, W5JBP, of Dallas, Texas; and Lawrence S. Higgins, W5UQ, of San Antonio, Texas. Running for vice director are incumbent Barney J. Boone, KJ5AE, of Dallas, Texas; and current Oklahoma Section Manager Coy C. Day, N5OK, of Union City, Oklahoma.

Ballots will be distributed no later than October 1, 1998, to ARRL full members in the affected divisions on record as of September 10, 1998. Ballots must be returned by November 20, 1998.

Several candidates for director and vice director faced no opposition, and the Election Committee has declared them elected:

* In the Hudson Division, reelected for two-year terms: Director Frank Fallon, N2FF, of East Williston, New York, and Vice Director J. P. Kleinhaus, W2XX, of Cortlandt Manor, New York.

* In the New England Division, reelected for a two-year term: Director Tom Frenaye, K1KI, of West Suffield, Connecticut.

* In the Northwestern Division, reelected for a two-year term: Director Mary Lou Brown, NM7N, of Anacortes, Washington.

* In the Roanoke Division, reelected for two-year terms: Director John Kanode, N4MM, of Boyce, Virginia, and Vice Director Dennis Bodson, W4PWF, of Arlington, Virginia.

* In the Rocky Mountain Division, elected for a three-year term as Director: Walt Stinson, W0CP, of Denver, Colorado (Stinson is the current Vice Director).

* In the Southwestern Division, reelected for three-year terms: Director Fried Heyn, WA6WZO, and Vice Director Art Goddard, W6XD, both of Costa Mesa, California.

Terms of office for successful candidates begin January 1, 1999.

SB QST ARL ARLB062
ARLB062 Bonnie strikes North Carolina; Virginia awaits its turn

Virginia ARES/RACES has initiated a Level III activation in preparation for Hurricane Bonnie. Virginia State RACES Officer and ARES SEC Frank Mackey, K4EC, reports that many local emergency operation centers have been staffed and many shelters are open in anticipation of evacuations.

The Virginia Department of Emergency Services communication supervisor has asked RACES station W4ZA at the state EOC to activate at 4 PM Eastern Time. The Virginia Emergency Net Alpha frequency will be 3.910 MHz (7.260 MHz alternate). The Virginia Emergency Digital net will be on 145.73 MHz. The Virginia Area A Tactical net (Williamsburg repeater) will be on 146.76 (-600 kHz).

Mackey says Virginia ARES will support the American Red Cross Headquarters Disaster Operations Center. Virginia ARES members are monitoring North Carolina emergency nets and passing pertinent information to the Red Cross via the Internet.

Hurricane Bonnie struck the Wilmington, North Carolina, area Wednesday afternoon. High winds have caused damage to schools in New Hanover County and to a hospital in Brunswick County. Widespread power outages are reported. The New Hanover County EOC was reported to be without commercial power and operating from emergency power.

ARLB061 ARES teams deployed for Hurricane

ZCZC AG61
QST de W1AW
ARRL Bulletin 61 ARLB061
From ARRL Headquarters
Newington CT August 26, 1998
To all radio amateurs

SB QST ARL ARLB061
ARLB061 ARES teams deployed for Hurricane

Amateur Radio Emergency Service teams are deployed in coastal Carolina regions as the massive Hurricane Bonnie approaches and Hurricane Danielle gains strength farther out in the Atlantic. Tropical storm-force wind and rain lashed the Atlantic coast early Wednesday as the edge the hurricane reached the US mainland. More than a half million residents and visitors in the Carolinas have been ordered to move inland. Mobile home owners in 44 North Carolina counties have been asked to evacuate.

The National Weather Service hurricane warnings now extend from Chincoteague, Virginia, to Edisto Beach, South Carolina, some 50 miles south of Charleston. The NWS says Bonnie took a more northerly path overnight and now is expected to make landfall between Morehead City and Wilmington, North Carolina, by Wednesday afternoon.

North Carolina Section Manager Reed Whitten, AB4W, says shelters for evacuees are expected to be along the I-95 corridor, well inland. ''Our goal is to have at least one ham in every shelter,'' he said. Hams deployed at shelters will provide communication support and backup, handle outgoing health and welfare traffic, and reassure people in the shelter that they ''that they have not lost all communication.'' Hams working in shelters are advised to be very visible in the shelters for that reason.

Hams are also staffing emergency operations centers in the wake of ARES activations.

The Hurricane Watch Net operates on 14.325 MHz. This is a directed net. Stations should not transmit until invited to do so by the net control station. Hurricane Watch Net members provide ground level meteorological reports to the National Hurricane Center.

ARRL section officials in the affected areas have announced the following regional HF net frequencies to handle emergency-related traffic:

South Carolina: 3.915 MHz

North Carolina: 3.923 MHz (7.232 MHz alternate)

Virginia: 3.910 MHz (7.260 MHz alternate), with health-and-welfare traffic on 3.947 MHz (7.240 MHz alternate).

Message-ID: <6s1hh5$q37@bgtnsc01.worldnet.att.net>
Source record: 163588

Gary is almost right.
The use of most telegraphy codes and abbreviations goes
back to the days of land-line telegraphy, more than 100 years ago. Companies
like Western Union did indeed charge by the word (a word being 6 characters,
including spaces and punctuation).
Their means of communication, a single wire with multiple drops,
really limited bandwidth - well - a bandwidth of unity) so brevity
was an importantant factor, hence the development of standard, agreed upon
abreviations and codes.
(PS, the traveling salesman was charged 3 words for "best regards",
even tho WU would send it as "73").
(PS2) In WU literature of the day it was called "seventy-three"
(PS3) According to my ARRL handbooks of yore, they always
stressed this was a telegraphy code, and on phone it should be
pronounced as "Best Regards".
(PS4) What do you mean: "Still commercially usefull"? Geez!
With more than 50,000 ocean going vessels it still the most reliable means
of communication. Let's not get carried away with hi-tech
solutions most of the world still can't afford.
73, Ted

How would you ensure 24/7 staffing? Eventually, someone would have to be paid to cover certain slots. Why not just have the ham club put up a repeater with an autopatch on it?

Incorrect. The FCC considers possession of a linear amplifier in anything other than a ham station to be PRESUMPTIVE EVIDENCE of intent to use it. They can confiscate it and file pertinent charges on that basis alone.

I don't think there are any such presumptions for other types of radio equipment that might be "unauthorized", but it would only take a tiny rewrite of relevant rules or laws to make it so. Then it WOULD BE illegal to POSSESS an unlicensed transmitter (or more accurately, a transmitter for which you have no license to operate it).

I'm confused as to what statement you disagree with. It is quite true that many volunteer ambulance personnel and firefighters in my own area are carrying modified Icom IC-02ATs and similar radios that are modified to transmit on the local fire and EMS channels. It's cheaper to do that than it is to get the agencies to issue type accepted portable radios to all members.

I have two problems with the above situation. 1) The agencies probably don't have a clue as to the regulations governing radio. The technicians that are modifying the ham rigs are hams themselves and usually get compensated (paid) for doing the mods by the individual member who owns the radio. If the agencies would prohibit the use of such radios by their members, it MIGHT put a dent in the practice. But, 2) Not every vollie must have his/her own personal transceiver to carry when off-duty. First, we have to convince these volunteer agencies of that basic truth. I believe that this is part of the reason for the proliferation of new "spectrum efficient" radio systems - too many people have radio transmitters, and they don't all need them. Now we're just making more room for them, instead of limiting access to the radio spectrum to licensed individuals and agencies.

2258. Decoding NWS S.A.M.E broadcasts

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-26 00:00:00 UTC
From: fordbick@usa.net
Message-ID: <6s1nnmuha1@nnrp1.dejanews.com>
Source record: 163593

I am trying to find software that can decode the new "Specific Area Message Encoding" alerts issued by the National Weather Service using the sound card on a PC. It appears to be a standard AFSK signal based upon the following info from the FCC technical paper:

Section 11.31 EAS protocol.

(a) The EAS uses a four part message for an emergency activation of the EAS. The four parts are; Preamble and EAS Header Codes, audio Attention Signal, message, and, Preamble and EAS End Of Message Codes.
(1) The Preamble and EAS Codes must use Audio Frequency Shift Keying at a rate of 520.83 bits per second to transmit the codes. Mark frequency is 2083.3 Hz and space frequency is 1562.5 Hz. Mark and space time must be 1.92 milliseconds. Characters are ASCII seven bit characters as defined in ANSI X3.4-1977 ending with an eighth null bit (either 1 or 0) to constitute a full eight-bit byte.

This would allow one to take a standard old weather radio and turn it into a new SAME radio capable of recording events, logging events, issuing alarms, etc.

Has anyone run across this sort of software???

Thanks.....J. Fordbick fordbick@usa.net

Actually Hell is wrong.

The FCC regs clearly state, that in an emergency concerning
a threath of life, any means of establishing communication is legal. That
means out-of-band, or excessive power, or anything else you deem necessary.

Now having said that,
if you do something like this, you better have a darn good reason
to explain your actions (and you WILL have to), including proving a lack of
other available means of communication.

As a secondary consideration, many states prohibit mobile
instalations of equipment capable of receiving police/ps
frequencies, let alone transmitting on them. I'm not sure of the
legality of these laws, but I would play it safe.

A hurricane is no more than a named storm. Why do hams and broadcasters on radio and TV obsess on them ? We get storms with 75 mph winds here sewveral times a year during different seasons. I bet if Bill attacked St. Kitts for their role in supporting terrorism or Argentina for their role in supplying McDonald's they would forget about Bonnie.

I can't get a damn forecast for AFTER we all die in Bonnie to plan my week because the NWS is tied up and overloaded.

Don't get me wrong it is a potentially dangerous weather event, but there are many.

What I see as possibly the biggest hurdle to this kind of development (which I find interesting too) is one of perception, the increasingly widespread notion that only professional electronics folks can do worthwhile electronic design; that only aerospace professionals can do anything original with satellites (since this thread keeps getting cross-posted to rec.radio.amateur.space...). And so on.

A complete and utter crock, of course. But ham radio sometimes seems to be more a hobby of mythology than of technology...

First of all, if we're seeing someone getting shot, raped, or robbed, we are most likely near a phone. BTW: Other people constitute one of the means of normal communication, so if there was someone else around when you transmitted on a public safety frequency, you can be fined and jailed.

I also *didn't* say we shouldn't, I only said it will probably get us into a lot of trouble. Even though we WERE saving a life, being fined and jailed (and having equipment confiscated) is not as worthy to my cause of helping as finding a real telephone or someone who can get to one.

2263. Operating Procedures versus habits

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-26 00:00:00 UTC
From: KD5CAS@iamerica.net
Message-ID: <35e45a09.83371282@news.iamerica.net>
Source record: 163598

A few days ago on a local 2 meter repeater, I took part in an interesting discussion about amateur operating procedures versus the 'common operating practices or habits'. The topic was whether or not certain operating practices were proper, such as the use of the "Q" signs on phone, and following one's callsign with "for ID". It became evident that each person had a particular 'pet peeve' regarding operating practices.

The discussion ended with most agreeing that the majority of hams have learned or picked up operating practices that they hear on the air. My experience in amateur radio (since August 1997) is not extensive. Most of the operating practices that I have learned have come from 'on the band' experience. Yet in the last year, I have never had another ham correct me, either in public or private, concerning an improper operating practice. Yet I know that I have done some of the things that we discussed on the repeater that day.

So, the point is this:
If the more experienced hams do not ELMER the less experienced hams in all aspects of the hobby, what can be expected? I believe that without true ELMERing, the newer hams will learn to fend for themselves, even if it means they learn (or form) improper habits concerning operating practices on their own.

Personally, I can accept being corrected if I make a mistake in operating practice. My parents called correction "discipline" That's right, DISCIPLINE. Through DISCIPLINE, mom and dad taught me to always say "Yes ma'am" and "No sir". Now, I'm not saying that we should punish those who make a mistake. I am saying that mistakes uncorrected become habits.

Dad always said experience was the best teacher. I would appreciate, even expect and welcome, a more experienced ham to correct me when I make a mistake.

What do you think?

Can you point to the rules that state this ??

If you are referring to PART 97, this has been restated by the FCC to only apply to hams and the transmission has to be in the ham bands. It is not a blanket statement ment for anyone and on any frequency other than the ham bands and for hams.

2265. Re: Operating Procedures versus habits

Message-ID: <6s1mo8$qhk@bgtnsc01.worldnet.att.net>
Source record: 163600

Hi Scott:
I'm sorry to agree:
Many of us who've (Is that a real word?) been in the hobby a long
time have stopped being Elmers. When I started, if I made a mistake,
or even a casual faux-pax, I would be reminded by my elders.
Even tho that could be annoying, it did keep the concept
of a "fraternity" alive.
But things have changed, in society as a whole. Nowadays,
anything goes. Reminders of tradition usually are interpreted
as an intrusion upon individuality. Skills are minimized, knowledge
is interpreted as a sign of "weirdness".
So too many of the OT's are in hiding, only talk amongst themselves.
And I'm really sorry about that. A great part of our hobby is the
history, the progression, and the development of the technology.
And only us old guys can convey the wonderment of what it meant
to us.
Don't give up hope, there still are real Elmers.
(Just maybe not in the places you would expect)

Maybe in the USA - the FCC regulations hardly apply elsewhere!

In any case, with the sheer number of mobile phones around nowadays, how
many people would NEED to use police frequencies directly?! Come on now,
be realistic!

No they don't. Please quote what you have in mind. BTW Sec. 97.403
doesn't say that, but maybe you've something else in mind.

Excessive power, yes. Out of sub-band for your mode, yes. Out of
sub-band for your class, yes. Impropers signal purity, yes.
Unauthorized external RF Amplifier, yes. But out of the amateur
bands for your ITU region, no.

> As a secondary consideration, many states prohibit mobile
> instalations of equipment capable of receiving police/ps
> frequencies, let alone transmitting on them. I'm not sure of the
> legality of these laws, but I would play it safe.

Yes, those local laws are legal and enforceable and the fact that the
alleged offender holds an FCC amateur radio license will be no
defense. The license is only a defense against a Commission action
for breach of the Part 97 rules, as is stated in 97.403.

The fact that life or property were truly saved, or at least that a
good faith attempt to save them was made, can be offered in
mitigation of penalties, but not as a defense against the offense.
It's very much the same situation as when a motorist claims that an
emergency requires him to break a motor vehicle traffic law such as
speeding, running a red light or driving without license or insurance.

I fail to see the relevance. I am speaking of the word "encrypted", which JC loves to spell as "encripted", which, in turn, is incorrect.

"D Stark" <nf2g@ggw.org> wrote:

>How would you ensure 24/7 staffing? Eventually, someone would have to
>be paid to cover certain slots.

The proposal is valid for certain types of PSAPs which already ARE staffed 24/7 with thoroughly trained communications personnel. This is not a proposal to put a radio on the corner of a desk in a police station and letting whoever is near it answer, like many departments did with CBs in the '70s.

Most communities now have a communications center like this. Please see http://www.apcointl.org or http://www.nena.org for information about public safety communications. After 17 years as an EMT, then Paramedic and firefighter, my profession now is public safety communications and the field has evolved into a very elaborate mesh of training, equipment and technology. You may be surprised to see what's happening in it.

>Why not just have the ham club put up
>a repeater with an autopatch on it?

Because I, or any other ham, as an itenerant user would not have normal access to the patch. We go back to depending on a select few to bring up the patch or act as intermediaries in gathering info. This is grossly inefficient - and - what if no one's around (that happened to me while I was trying to report an MVA last Sunday on the Garden State Pwy!)???

Next, the patch may time out before the public safety dispatcher has an opportunity to receive complete information or while the dispatcher is instructing the amateur caller on lifesaving procedures (emergency medical dispatch pre-arrival instructions).

We now can make the caller the FIRST RESPONDER if they are physically able and willing to follow simple instructions even if they don't know CPR or first aid. More people are surviving as a result of this where they would have died without intervention.

Direct communications with a trained public safety telecommunicator/ dispatcher at a PSAP - ONLY for the purposes of reporting an emergency - is a much better way to go. I believe it would be a tremendous increase in the value of amateur radio on the whole (and may save a few lives). Maybe something to try on an evaluation basis?!

I have submitted a draft PRM for such possible operation to the League for criticism/ comments. If you'd like to see it, I'll email it to you. Should be interesting. I admit this idea is not a conventional solution as we have seen in the past. It requires a little thinking outside of the box to see the potential.

Ken's remarks were so good they need to be reposted.

SAVE CW = SAVE HAM RADIO!!!!

In article <6rl7gg$o5m@news-central.tiac.net>, ken_freeland@yahoo.com (Ken Freeland) wrote:

The honest thruth is that the ARRL board members who voted for the proposal put forth
by the ARRL are totally clueless. We need to find out who they are and have them
removed from the board and preferably from Amateur Radio altogether. They're an
embarrassment to the League and to the ARS in general. Noone knowlegable about Amateur
Radio would dare put their name on such a proposal. They couldn't, with clear
conscience, vote for such a proposal. It's clear that those that voted for it are
shills for the equipment manufacturers. All they care about is numbers. They simply
want to sell more radios.

Rather than making themselves look like a bunch of horses asses, like the board
members of the League did, the fcc put forth a much more reasonable proposal.
Unfortunately their proposal creates problems and doesn't really solve any, it's just
less offensive than the Leagues proposal.

If you want to make any changes to the license classes, the whole structure needs to
be rethought out. You can't just drop a couple of classes.

Bascially what needs to happen is the Novice license should stay but it needs to be a
better entry level license. The full tech and codeless tech are an embarrassment and
serve no useful purpose and should be eliminated.

The novice license should offer hf/vhf/uhf privileges. For those that want the hf
privs they can take the cw test, for those that just want some vhf/uhf privs, they
don't have to take the code.

5wpm is too slow to be enjoyable to operate. Therefore the novice code test should be
at least 15wpm. 20wpm isn't unreasonable. The theory test should be several hundred
questions and cover all modes that the licensee is authorized to use.

HF spectrum shoul be as follows...

1950 - 2000 khz ssb/cw 200w
3950 - 4000 khz ssb 200w
3600 - 3615 khz cw 200w
10.14 - 10.15 mhz cw 200w
28.8 - 28.9 mhz ssb 200w
28.1 - 28.150 mhz cw 200w

vhf spectrum should be .....

50 - 54 all modes 25 w

222 - 225 all modes 25w

902 - 928 all modes 25w

The novice and code free novice would take the place of the current novice, tech, and
tech plus licenses.

We can let the current lazy bastards (techs, tech-minuses), keep their current privs
because I can't stand to listen to them cry if they're taken away.

General class cw should be minimum 20wpm.

Extra should go up to 30wpm.

Theory tests should be strengthened as well.

Remember there is nothing to be gained by lowering standards, you want to get better,
not slide back.

>limiting access to the radio spectrum to licensed individuals and
>agencies.

Well, that's not entirely the root of the issue. First, we have very old technology that is intact and, since it produces revenue, will not be replaced with more spectrum efficient technology. Instead of making way for the new by compulsory elimination of inefficient technology (like IMTS telephone or analog air-to-ground telephone), we glom more spectrum space.

Next, we don't regionalize well. Every kingdom wants its own system and we use 135 discrete frequencies when we could put in a county-wide trunking system with 20 channels to efficiently provide many many more virtual channels and enhanced features for each user. Again, we go grabbing more space instead of commonly solving radio issues.

Then, I remember (you probably do, too) when radio spectrum was considered a natural resource, not the solution to the general budget deficit. Now, high rollers are seeking exclusive use of radio spectrum for their speculative ventures and they'll pay the bucks for it, giving us (public safety and ARS) the elbow. Some of the things the ARS has lost frequencies to have NEVER made it near profitability. Listen to 220 - 222 MHz! Instead of regrouping to handle crowding, the spectrum is still assigned to ACSB trunking and conventional technology and is a graveyard in most parts of the country.

It has become the primary mandate of the FCC to administer auctions and not perform enforcement on nearly the scale it should be! (that answers another comment above about the FCC, too). At an emergency management conference two years ago in Missouri, an employee of the Commission toyed with the concept that Congress may elect to "sell" public safety frequencies to a private concern and users would have to pay their radio bill to stay on the air!!! Imagine that!!!

Personally, I won't go into a fire without: 1) an SCBA & turnout gear, 2) a flashlight, 3) a "Halligan" or an axe and 4) my OWN radio. I don't have to talk on it, but It's a safety thing with me.

Steve

Welcome to the Auxiliary Communications Service Newsletter, developed by the ACS Training Unit of the State of California Governor's Office of Emergency Services. Please visit our ACS Home Page at http://acs.oes.ca.gov

The purpose of this weekly newsletter is to bring those of us in emergency communications closer together by sharing common ideas, and by introducing new technology into the emergency services community. All individuals with an interest in emergency communications, disaster preparedness or helping the community at large are encouraged to participate here in an open forum.

You will find a virtual community here, with representatives from many different organizations with the same common goal: emergency response. We encourage everyone, from whatever organization you represent (or just yourself!) to bring us your ideas, suggestions, concerns, manuals, handbooks, or opinions so that we may share them with the group. To those of you who have just joined us, welcome aboard! Newsletter Members: <681>
.....

>From the Editor's Desk:
Several of you have called or written asking what information we could share on Hurricane Bonnie. So, we are sending this Special Report out to you, and packing it with Bonnie material for you to review. We will update you as we get additional information. Our regular Newsletter will follow on Monday, August 31st. Dave Larton - Editor

WASHINGTON August 26, 1998 11:00 a.m. EDT -
The first winds of Hurricane Bonnie are hitting the North Carolina coast - with an anticipated landfall around Wilmington - and the Federal Emergency Management Agency (FEMA) and state and local officials and voluntary organizations are working to be ready for the expected flooding, high winds and storm surge. The slightly slowing hurricane is now expected to come onshore by early to mid-afternoon with hurricane force winds lasting in some areas as long as 12 hours or more. Storm surge in some areas may be as high as 9 to 11 feet. North Carolina has enacted a mandatory evacuation of 19 counties; South Carolina has evacuated two counties.

"We're ready to go. We're just waiting on the hurricane," said FEMA Director James Lee Witt. "This is a very serious situation. We are working with state and local officials to be as ready as possible."

FEMA has fully activated its Emergency Support Team in FEMA headquarters, in Washington, D.C. as of 7 a.m. this morning. All Emergency Support Functions (ESFs) are now activated.

Meanwhile, Southern Texas is still recovering from significant flooding from Tropical Storm Charley, and Hurricane Danielle, now a Category 2 storm, is continuing to move west-northwest in the Caribbean in a path that is likely to take it north of the U.S. Virgin Islands and Puerto Rico.

.....
From: Scott Herring <redcross1@GEOCITIES.COM>

Hi Everyone,

Since it looks like we're looking at getting a double shot of hurricanes, I figured I would post this information.

There is a mailing list sponsored by Lowe's Home Improvement Stores and FEMA. This list sends out emails concerning all new information about developing storms, as well as activities caused by existing storms. They just added another server to take the extra traffic that was being generated by Bonnie and Charlie.

Here's the website to register for the list.
http://www.storm98.com/email/

Be Safe.

FEMA Web site Experiences Extremely Use
Washington, Aug 26, 1998 -- The number of people seeking updates on the progress of Hurricane Bonnie have resulted in a daily tenfold increase in accesses to the FEMA Web site. Over the course of Hurricane Bonnie's approach, the site has had nearly 2 million accesses/day. Consequently, the resources available to connect to the server are strained, causing delays in getting to the FEMA Web site.

The site continues to be updated with new information from a variety of reliable government sources. These include the National Hurricane Center, FEMA Regional Offices and the experts at FEMA Headquarters.

Internet users are urged to have patience in this time of emergency. By pausing and trying the "Refresh" or "Reload" button on the browser screen or by try the Web address after few minutes, users will eventually connect. FEMA apologizes for any inconvenience this extremely heavy traffic has caused.

.....
From: Mark Foster <mfoster@shore.net>

After traveling around the net over the last couple of days to look at the various hurricane list out there, I've decided an update is definitely in order.

I just got off the phone with one of the pilots at the 53 WRS and interviewed him regarding the frequencies they are using for comms during their missions. Here is the scope.

The 53 WRS uses the "Teal" callsign when they are on their hurricane hunter missions. When they are on an airlift mission they use "Hobby." The Swan and Gull callsigns are NO longer used.

Yes, they do use UHF milsat for DATA ONLY comms (no voice). I doubt it would be worth the time or energy to attempt to monitor since the Vortex and Recco messages sent via this data circuit are widely available on the net within minutes after they clear the aircraft.

>From the HH website:
"A key part of the WRS is its ability to send data instantaneously via military satellite directly to the forecasters at the National Hurricane Center in Miami, or to another transceiver at Keesler Air Force Base, or a portable station which moves with the Hurricane Hunters wherever they go to chase the storms. The weather officer can also send written messages to the

forecasters and staff on the ground, providing details of the storm and coordinating the mission."

They use primarily three HF nets for comms in addition to their normal VHF/UHF civilian/milair stuff.

GHFS: According to Colonel Peterson they use this when they need to talk to Miami or Keesler, etc. Look for them on the primary GHFS frequencies of 4724, 6712, 6739, 8968, 8992, 11175, 13200, 15016, and 17976 kHz. If the comms last any length of time or traffic is heavy they could move to a GHFS discrete, so listen for that frequency to be passed by the GHFS ground station.

MWARA: Used by the pilots for air traffic control purposes. Depending on where the storm is will determine which MWARA will be used the the HH folks. You will primary catch them on the NAT or CAR freq families and when they are working the East Pacific storms look for them on the CEP family of freqs. According to the colonel they are using St. Croix in the Virgin Islands for a forward base in the Atlantic and Hickam as a forward base in the Pacific.

For an excellent list of HF MWARA channels a visit to WUN's Tony Orr website is a must. The URL is http://patriot.net/~jetset/hf.html.

The third HF net that Col Peterson said they use, but rarely is the US Air MARS phone patch net. Some of the freqs that have been reported include: 7633.5 and 13927 kHz.

Bob Wyman and Allan Stern have been providing excellent coverage of the VHF/UHF freqs being used down their way and those freqs have also been confirmed by Col Peterson.

As for the Air2Air that Bob asked about I think the 304.8 is it. However, you might also want to check the following: 381.0, 283.7, 349.4 and 385.9 MHz. One of these could prove productive.
Those of you within Keelser UHF range should watch the 53WRS CP freq of 349.4 MHz for comms. That freq was in use the last time I was down that way.

Be sure to visit the 53 WRS website which has lots of great information at:

http://www.hurricanehunters.com

Have a great time out there and good hunting.

Cross-posted to: sci.astro,sci.astro.amateur,rec.radio.shortwave,rec.radio.amateur.misc

/\

LOW LATITUDE LATITUDE AURORAL ACTIVITY WATCH□

WATCH ISSUED: 23:35 UTC, 25 AUGUST

/\

VALID BEGINNING AT: 06:00 UTC ON 26 AUGUST
VALID UNTIL: 19:00 UTC ON 28 AUGUST

HIGH RISK PERIOD: 26 - 27 AUG (UTC days)
MODERATE RISK PERIOD: 28 AUG

PREDICTED ACTIVITY INDICES: 80, 60, 22, 12 (26 AUG - 29 AUG)
(INPUT INTO THE PREDICTIVE AURORA SOFTWARE *)

POTENTIAL MAGNITUDE OF MIDDLE LATITUDE AURORAL ACTIVITY: HIGH TO VERY
HIGH

POTENTIAL DURATION OF THIS ACTIVITY: MAIN BELT = 24 TO 36 HOURS
MINOR BELT = 48 HOURS

ESTIMATED OPTIMUM OBSERVING CONDITIONS: NEAR LOCAL MIDNIGHT

EXPECTED LUNAR INTERFERENCE: NIL NEAR AND AFTER LOCAL MIDNIGHT

OVERALL OPPORTUNITY FOR OBSERVATIONS FROM MIDDLE LATITUDES: GOOD TO VERY
GOOD

AURORAL ACTIVITY MAY BE OBSERVED APPROXIMATELY NORTH OF A LINE FROM...

NORTHERN CALIFORNIA TO NORTHERN UTAH TO NORTHERN COLORADO TO
NORTHERN
KANSAS TO MISSOURI TO KENTUCKY AND POSSIBLY NORTHERN TENNESSEE TO
NORTH CAROLINA.

ACTIVITY MAY ALSO BE OBSERVED APPROXIMATELY NORTH OF A LINE FROM...

CENTRAL FRANCE TO SOUTHERN GERMANY TO NORTHERN CZECHOSLOVAKIA TO
CENTRAL POLAND TO NOTHERN RUSSIA INCLUDING ALL OF GREAT BRITAIN,
ALL
OF IRELAND, ALL OF NORWAY, ALL OF SWEDEN AND ALL OF FINLAND.
OBSERVATIONS OF STRONG ACTIVITY WILL ALSO BE POSSIBLE FROM NEW
ZEALAND AND EXTREME SOUTHERN AUSTRALIA.

SYNOPSIS...

A major coronal mass ejection is thought to be in-transit to the
Earth
following yesterdays major class X1.1/3B proton flare. The arrival of
this
disturbance is expected anytime between 06:00 UTC on 26 August and 24:00
UTC
on 26 August, with a preference between 12:00 and 18:00 UTC on 26 August.
Auroral activity is expected to rapidly reach major to severe storm levels
immediately to a few hours after the arrival of the shock front associated
with the coronal mass ejection. If conditions are as favorable as we
expect
them to become, visible auroral actiivty (at times very intense) could
become
visible as far south as northern California, Colorado, Kansas and North
Carolina (see above). This is expected to be the strongest auroral storm
so
far this solar cycle. Whether it will reach that expectation remains to be
seen, but the potential certainly exists.

Observers in North America should therefore watch closely for
activity
during the extreme pre-dawn hours of 26 August and during the evening of
26/27 August. The main phase of this disturbance could approach 24 hours
in
duration, providing most of the Earth's middle latitude regions with a
good
opportunity to observe activity.

The moon will also be out of the sky near and after local midnight,
which will provide optimum dark-sky conditions for observing this event.
As a
result, auroral activity may be observed much farther south than would
otherwise be possible.

This watch will remain in effect until 19:00 UTC on 28 August. It
will then be updated or allowed to expire.

Near real-time POLAR spacecraft auroral imagery is available at:
http://solar.uleth.ca/solar
in the Aurora section (or see the side panel).

PLEASE REPORT OBSERVATIONS OF AURORAL ACTIVITY TO:
http://solar.uleth.ca/solar/www/auroras.html

** End of Watch **

2302. WARNING: Potential Satellite Anomaly Warning Issued

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-26 00:00:00 UTC
From: oler@holly.cc.uleth.ca
Message-ID: <6s07pj$70310@mars.online.uleth.ca>
Source record: 163637
Cross-posted to: sci.astro,sci.astro.amateur,rec.radio.shortwave,rec.radio.amateur.misc

/\

POTENTIAL SATELLITE ANOMALY WARNING

ISSUED: 23:10 UTC, 25 AUGUST

/\

SATELLITE OPERATORS or SATELLITE USERS requiring real-time space environment conditions should investigate the software at:☐

http://solar.uleth.ca/solar/www/swarm.html

CURRENT CONDITIONS:

Energetic protons at greater than 10 MeV are currently running at about 170 pfu. Protons have been slowly increasing since 14:00 UTC following the initial decay that proceeded yesterdays major X1.1/3B proton flare. This increase is thought to be due to the closing proximity of the associated large coronal mass ejection to the Earth.

Energetic electrons at greater than 2 MeV are also enhanced, most likely above 1,000 pfu. It is difficult to tell the precise flux levels since the incoming energetic protons contaminate the electron sensors. The electron enhancement began a few days ago following the arrival of a coronal hole related solar wind stream.

These conditions may support some surface-charging and possibly some deep-dielectric charging related satellite anomalies.

OUTLOOK:

Of greatest concern at the present time is the anticipated impact of the large coronal mass ejection associated with yesterdays major X-class proton solar flare. The arrival of this disturbance is expected to be strong, with potentially hazardous conditions for spacecraft.

The disturbance is expected to have a fairly strong shocked front. The☐ increased solar wind pressure may be sufficient to temporarily drive the magnetopause inward within geosynchronous orbit. As a result, geosynchronous satellites may experience a magnetopause crossing into the more turbulent magnetosheath. Operators should be aware of this increased risk from approximately 06:00 UTC on 26 August through 06:00 UTC on 27 August. Magnetopause crossings are most probable during the noon-sector transit of geosynchronous satellites.

The anticipated disturbance is expected to result in a major to severe geomagnetic storm. Geomagnetic K-indices of between 6 and 9 wlil be possible with this event. As a result, surface charging anomalies may affect many geosynchronous and high-inclination orbiting spacecraft, particularly when the spacecraft are in the midnight to sunrise sector. Subsequent discharges may result in electrical upsets.

Low altitude spacecraft, particularly those with perigees below about 500 km, could experience large increases in atmospheric drag resulting from enhanced atmospheric density and upper-atmospheric heating. This effect will commence roughly six hours after the geomagnetic storm begins and should last approximately twelve hours after the storm ends.

Satellite communications through the auroral zone may experience strong phase and amplitude scintillation. 30 MHz to 30 GHz Spacetrack radars operating through the auroral ovals may also experience anomalies such as unusual signal refraction and/or retardation that may result in ranging and/or pointing errors.

These conditions should begin abating on 28 August.

A current historical analysis of trends of energetic electron fluence at greater than 2 MeV at geosynchronous altitudes follows:

ENERGETIC ELECTRON FLUENCE 60-DAY HISTORY AT GREATER THAN 2 MEV
Valid: 24 August 1998

MINOR STORM : 20 % HIGH LATITUDES : SEVERE
ACTIVE OR LESS : 5 % POLAR LATITUDES : SEVERE
-------------------------------- --------------------------------
PROBABLE SI ASSOCIATION : 90% ESTIMATED GLOBAL IMPACT: MAJOR TO SEVERE

ESTIMATED FORECAST PEAK PLANETARY 24-HOUR A-INDEX DURING STORM: 80 - 120
---- ---------------

COMMENTS:

A significant interplanetary disturbance is thought to be in transit
toward the Earth. The large coronal mass ejection associated with yesterdays
large X1.1/3B proton flare is expected to impact the Earth sometime between
approximately 12:00 and 24:00 UTC on 26 August. There is a moderate risk for
extended periods of severe geomagnetic storming associated with this event.
K-indices could easily reach 8 and 9 during the storm.

A strong ionospheric storm is expected to follow the onset of strong
geomagnetic storming. Polar latitude, high latitude, middle latitude and some
lower latitudes could experience strong depressions in maximum usable
frequencies. High and polar latitude paths are expected to be rendered
essentially useless during the period (they are currently near-useless as the
polar cap absorption activity from the incoming energetic protons continues).

The disturbance should begin weakening later on 27 August and
particularly on 28 August.

Data from Culgoora during the major flare suggests there may be an
additional shock imbedded within the main shocked disturbance. As a result,
there may be two separate intervals of strong activity.

** End of Warning **
```

2305. KC8JBO and KK7HO getogether??

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-26 00:00:00 UTC
From: n0vfp@qsl.net
Message-ID: <6s071k$7cp$1@nnrp1.dejanews.com>
Source record: 163640

This was posted on the message board.

: : : : Does anyone have any wav files of the west coast jammers preferably from the lasvegas area that they can send.

: : : GIVE IT A BREAK FRG. I HAVEN'T JAMMED THE DAMN NET. I HAVE ON OCCASION EXPRESSED MY OPINION ON CERTAIN THINGS BUT MUSIC, TAPE PLAYING ETC. I DON'T DO. : : : THERE ARE PLENTY OF TAPES OF THE NET JAMMING OUR QSO'S_YOU WANT THOSE?? : : Boy that sparked a little anger : : But Timmy will say he didnt post this either : : All that was mentioned was I wanted jamming wav files from the lasvegas area if the shoe fit's there tim ol'boy then wear it.

: Fuck you_I am really tired of your shit. Go ahead
: Continue if you like, my attorney gets all the libelous lies and accusations via e-mail. You SOBs are about to find out.

Go buy yourself a case of crying towels, Timmy--either that or grow up and act like a MAN, for God's sake. Everyone's had enough of your foul language and whining both here and on 3950, so put a sock in it. Radio is supposed to be a hobby, not your life! What's the real story here, Tim? Is your life so empty that you have nothing to do but post crap on the Net day after day about how everybody picks on you? Gee, wish I could file suit against all the people who've said things about me that I didn't like, but I have more sense than that. Your attorney must be a real shyster. Seems to me you're just another radio crybaby (and I've know a few) making your story up as you go along. You, along with many other radio crybabies, act like idiots on the amateur bands and Citizen's Band, and then you get hostile and defensive when people poke a bit of fun at you on the Net. Hey, settle down, Tim, it's just words that are flying, not bullets!! Maybe you and KC8JBO should get together in rec.radio.amateur.misc and discuss your delusions with one another--now THAT conversation would make an interesting thread.Meantime, I suggest you cool off a bit, or YOU may be the next amateur op. who has "quiet hours" imposed on them by the FCC, eh? 'Nuff said--I'm out and "just listening."

You know, that sounds like a good idea, Tim and Roger would have alot in common.

In LA the police and sheriff and county fire do not use standard 450mhz uhf frequencies. They use TV channels 14-17, which when used for public service have only 3mhz for repeater input. Standard 450-470mhz systems use 5mhz offsets.

Does anyone know any details about the hostage/suicide situation that occurred in Gakona, Alaska last Thursday at about the same time as the Oregon school shooting, which was mentioned only once on CNN during the day? I have been unable to find any news stories on this, even in the Alaska newspapers online. Gakona is only a few miles from the HAARP facility. --SW)
>
What Goes Up Must Come Down Military Applications of Advanced TeslaTechnology
by Missy Mcdonald

Chicken Little was right when she said "the sky is falling." But unless you're gifted with some sort of X-ray vision, you can't see the torrential "rain" of microscopic particles freefalling through our atmosphere. A little known government funded experiment called HAARP (High Frequency Active Auroral Research Project), would like to take the free out of freefalling. Where is HAARP being implemented? Just what is HAARP and what's it capable of?

The project is taking place on a remote slope in Gakona, Alaska. I might add that similar facilities can be found worldwide. It's been strategically aligned with one of the earth's geomagnetic lines of force, and sits atop an underground reservoir consisting of millions of cubic feet of natural gas.

HAARP's apparatus includes 48 antenna elements arranged in 8 rows of 6 columns. It's basically a very large transmitter built to beam unprecedented amounts of energy into the ionosphere (see figure) thus "supercharging" it. HAARP can be described as having a "butterfly" effect. A comparatively small amount of energy beamed in one place, amplifies in the upper atmosphere, and unleashes greater energy somewhere else. This makes HAARP an especially interesting prospect for the military even though it's highly unpredictable.

The military has big plans for the many different functions this project qualifies for. One such function being defense weaponry. In U.S. Patent #4,686,605 (one of twelve HAARP related patents) it states that by transmitting a multitude of electromagnetic waves at varying frequencies,

over a given region "this can cause confusion of or interference with or even complete disruption of guidance systems employed by even the most sophisticated of airplanes and missiles." Also achieved would be communication breakdown as well as loss of power and it has the ability to disable electrical systems.

Many leading edge scientists describe global weather as not only air pressure and thermal systems, but also as an electrical system. In the book Angels Don't Play This HAARP, authors Dr. Nick Begich and Jeane Manning found that "As far back as 1958, the Chief White House Advisor on weather modification, Capt. Howard T. Orville said the DOD (Department of Defense) was studying ways to manipulate the charges of the earth and sky and so affect the weather' by using an electronic beam to ionize or deionize the atmosphere over a given area" (70).

Tomography is another application. By creating a radiation shower with ELF's (extra low frequencies) around 10-20 Hertz (pulses per second) the military is able to locate underground structures such as shelters, nuclear facilities, even oil and mineral deposits.

Hand in hand with HAARP's mapping ability was a project called Prime Argus that investigated ways of not only detecting earthquakes, but causing them as well, by creating an imbalance in a certain region's magnetic field. This particular project was funded by DARPA (Defense Advanced Research Projects Agency), which has since changed it's acronym to just ARPA. Hmmm. Some of these weapons violate international agreements. A separate violation began as a precursor to HAARP in Wisconsin during the 1970's. Project Sanguine caused major disputes between the residents, scientists, and politicians. The U.S. Navy wanted to utilize close to 40% of the state with antenna apparatus that would cover 6,200 miles! All in order to broadcast ELF waves to a fleet of nuclear submarines. After much debate the project was finally dumped.

By way of comparasion, the HAARP would be using the ionosphere as one big, round, multi-purpose antenna. ELF (extra low frequency) waves are many miles long and are the most sluggish of the frequency spectrum. Their range is below 1000 Hertz, the same range as the brain-wave patterns of all animals including humans. The body's cells and organs, like every other living thing on the planet, have their own electromagnetic fields. These fields interact with the earth's natural electromagnetic field. ELF's external pulsating waves alter the way calcium ions bind to cells, creating an array of chemical changes, altering health and mental abilities. The U.S. Naval Medical Research Center discovered that the potency of a naturally occuring chemical in the body can be increased by "harmonizing" with that chemical's frequency. HAARP could quite possibly re-route chemical reactions in our bodies and have detrimental effects on overall health.

Brainwave patterns are highly receptive to ELFs. Brainwaves can be pushed into new patterns by external stimulation. This causes brain chemistry change which in turn causes change in brain outputs in the form of thoughts, emotions, or physical condition. Frequency, power level, and

wave form are key components for manipulating brain activity. The HAARP radiated energy pulses, and wave forms cited in the contract documents, are within the ranges most cited by research scientists as those responsible for controlling and manipulating the mind and body. An article in Military Review revealed a "new mental battlefield" emerging from technology utilizing telepathic weapon systems that interfere with the brains electrical functioning. The potential for abuse here is staggering!

HAARP records indicate when the project reaches it's peak, ELF waves can be used to affect entire regional populations. The projected date for a fully operational HAARP is set for 1998. Given the unpredictability of HAARP and other like facilities, certain questionable incidents may have connections. For instance Robert Cooke reported in New York Newsday "Quick mysterious bursts of energy that mimic bursts of radio waves from atomic explosions are being detected by a prototype sattelite"(15). Scientists don't know where they're originating from but that they're extraordinarily strong and brief.

At the Chicago Air Route Traffic Control Center in September, 1994, a computer failure caused nationwide flight delays due not only to lost radar but lost radio communications as well. The National Air Traffic Control Association contends most of the airspace they cover was out for 7 minutes, while some areas were out for 45 minutes. The facility has several back-up systems, on-site generators for power failures and was built to withstand a nuclear attack; all it took to foul it up was one electrician who made a bad connection -- he took the blame anyway. Also circumstancially suspect is the first day the HAARP facility was powered up (on record that is) happened to coincide with last summer's massive power outages in the Western U.S. However, without independent monitoring keeping track, no official connections can be made. Of course, with all the big money and powers involved, a "watchdog" group would likely turn into "lapdog" while business continued as usual. For more in-depth information I suggest reading the book "Angels Don't Play This HAARP" (Advances In Tesla Technology), written by Jeane Manning and Dr. Nick Begich. ----------

ARTICLE 660 - X - RAY EQUIPMENT

A. General

660-1. Scope. This article covers all X-ray equipment operating at any frequency or voltage for industrial or other nonmedical or nondental use.

(FPN) See Atricle 517 for medical and dental X-ray.

Nothing in this article shall be constued as specifying safeguards against the useful beam or stray X-ray radiation.

(FPN No. 1): Radiation safety and performance requirements of several classes of X-ray equipment are regulated under Public Law 90-602 and are enforced by the Department of Health and Human Services.

(FPN No. 2); In addition, information and radiation protection by the National Council on Radiation Protection and Measurements is published as Reports of the National Council on Radiation Protection and Measurement.These reports are obtainable from the NCRP Publications, 7910, Bethesda, MD 20814.

660-2. Definitions.

Long-Time Rating: A rating based on an operating interval of 5 minutes or longer.

Mobile: X-ray equipment mounted on a permanent base with wheels and/or casters for moving while completely assembled.

Momentary Rating: A rating based on an operating interval that does not exceed 5 seconds.

Portable: X-ray equipment designed to be hand carried.

Transportable: X-ray equipment to be installed in a vehicle or that may be readily disassembled for transport in a vehicle.

KF4ODD> THERE IS MORE, INCLUDING ARTICLE 880 OF THE NATIONAL FIRE PROTECTION ASSOCIATION AND NATIONAL ELECTRIC CODES WHICH MAY BE ADOPTED INTO LOCAL LAWS.

Yeah, it was for this reason that I assumed it was okay. But,
I wasn't able to pick up anything except for a couple of airport
weather beacons, runway weather announcments (voice), and an
occassional airplane, all on AM extended-RX.

Does anyone in South East Queensland have an old 2m 70cm transciever
that they don't want?
I am after one, even if it is 20 years old, so long as it works and
dosent need a low voltage power socket. A price i'm after is about $200
Aus max.

Thanks
Lachlan

Bullshit. It is NOT all mode. It does not include the hard to find
module which is required to work FM.

Hi !

Who is working with a YAESU FL 7000 amplifier and
can give me information about it?
Power? QSK?
Is it good or is it junk?
I have the FT1000MP and want to buy a linear for this nice rig.
The new VL 1000 is much too expensive so i thought of the FL 7000.

Any info is appreciated

At this point I was agreeing with you but the above statement is totally wrong and there is a law against using ham radio equipment on the public safety frequencies. If the equipment is not type accepted or approved by the FCC then it is illegal to use it on those frequencies.

HMG and Dan. Most new systems are going trunk and do not use CTCSS or PL.
They now use a system number and a connect tone. To be able to program an 800
trunked radio you need both to be able to follow the trunking and also to talk
back. To have the system key you need to get it from the system administrator
and I doubt that any ham would get that key from them. Also ham HTs will not
go on trunk so the only way for someone to have a radio for trunking is to but
one from Motorola or GE/Ericsson or used. Many of our local systems are
trunked and unless you get these keys you will not have access to them. It is
not like the old days where you can figure out what PL tone they are using and
program it into your ham ht and be able to access their system.

Hams have used radios since the late 1800's . . . ! (Yes, it was CW, but
that is still a full-blown radio.)

I believe FM came into wider use in the mid-50's, but I can't be sure. AM
was mainly used back then for public safety, radio, etc, however [W]FM was
used for television audio.

For $1 at a flea market, I bought a new cell phone leather case that fits the q7 perfectly. The case has its own belt clip and the radio slips in and out of the case fine (without the standard belt clip connected). It also really protects the radio. I cannot use the radio while in the case, but that does not bother me. It comes out easy enough when I want it to. $30 for the ICOM does bother me.

Not me! Not outside my home counties where I know enough LEOs to make reporting a crime safe. I reported a couple gang bangers hiding behind a Dumpster to LA cops obviously looking for somebody. Got a trumped-up traffic ticket as thanks. Was later told this was SOP to assure they could ID me! I'd be afraid they'd frame some worse crime on me!

Emergency? Away from home, I'd call 911 from a pay phone once I was far enough away to avoid responding police units.

Attacked by criminals? I grew up So. of LA (Compton), got straight "A"s in my LE courses, weigh 240, NRA firearms (pistol)instructor, martial arts, etc. With all due respect to the real pro's out there, what's the average donut dunker gonna do for me except get himself hurt? Better off calling a HAM. (S)he won't shoot me by mistake! Or arrest me for defending myself. {:o)

That's not entirely true. The 25KHz calibrator has a dual flip-flop
used to divide the 100MHz xtal signal down to 25KHz. ;-)

Not that software or mods help much ;-)

Perhaps a bit of historical context will be useful in settling this issue.
In days of yore, when the telegraph was still a commercially useful
means of communications, telegraph companies charged by the
word. As is usual, parsimonious companies sought to reduce the
charges they paid to send telegrams to and from their outside
salesmen. To do this, they developed commercial codebooks.
These codebooks contained numbered lists of phrases commonly
used in correspondence. Number 73 on one such list was the
formalism "Best Regards".

So instead of signing a message

"Best Regards
Jonathan F Whistlewhite"

a thrifty commercial traveler would sign his message

"73
John"

and over the course of a year save his employer a considerable
sum in telegraphic expense. Thus there is your answer, 73 is
counted as one word, so it should be pronounced as a single
number, seventy three, rather than as two separate numbers,
seven and three.

It should be noted, however, that since both "Best Regards"
and 73 are empty formalisms, no information content is lost
if the traveler simply signs his messages "John", and thus
halves his employer's costs yet again. Eventually, companies
came to realize this, and commercial codebooks fell out of
use for conveying such contentless expressions.

Former Amateur Radio Operator Burt Fisher, wrote a letter to the editor of broadcast oriented Radio World Magazine which was published in the May 27, 1998 issue.

A scathing attack on hams everywhere, Mr. Fisher tried to paint a picture of a bunch of doddering old-timers hanging on to spectrum which should be auctioned off to the highest bidder. He went on to say that we have no purpose and cellphones, etc were far better for emergencies and so on.

The August 19, 1998 issue contains two FULL tabloid pages of no less than eight
replies to Burt's letter. ALL the commenters condemn Mr. Fisher's unabashed attack on Amateur Radio, and feature detailed comments and fact filled retorts to every "issue" Mr. fisher spoke of. Noteworthy is the fact that RW rarely prints so many letters from readers on one specific topic!

So, if any of you regular readers had any doubt's about Mr. Fisher's sanity or motivation, please refer to the RW editorial pages and find out what hams in the broadcast industry think of him.

This "man" is a black mark on the fraternity and has taken his writing crimes "public" and been shot in the shorts for it.

No, I am 100% correct, and YOU are ignorant.

LOOK AT THIS:
==========
From the FAF - Frequently Asked Frequencies
on ftp://oak.oakland.edu/pub/hamradio/docs/misc/scanner.faf

Paired Frequencies

Base/Rptr mobile i/p offset

152-152 MHz 157-158 MHz +5.26 MHz (Taxi)
+5.26/+6.46 (Mobile Phone)
160-162 156-157 -4.6 (Marine VHF)
217-218 219-220 +2 (Marine AMTS)
220-221 221-222 +1
422-425 427-430 +5 (Great Lakes border)
450-465 455-470 +5 (10 MHz segments)
470-509 473-512 +3 (6 MHz segments)
851-896 806-851 -45
935-940 896-901 -39
==========
Los Angeles uses TV channels 14 - 17 for their repeaters, and the ch14-17
range has 3.0 MHz offsets.

BTW: It's "Hells AngEL".

Hmm, in all my years of grade school, we had spelling tests every week in English class. Never did we have a "Spelling Class". Spelling is CERTAINLY basic English.

BTW: You spelled it incorrectly at least THREE TIMES.

>And I guess that when you cannot say anything usefull critique the spelling.

No, I did say something useful -- I am letting you know that it was created for efficiency and security, NOT so others' radios are disabled from transmitting on digital frequencies (with which non-digital radios CAN interfere).

Message-ID: <1998082616573500.MAA12427@ladder03.news.aol.com>
Source record: 163680

Talking out of his rectal oriface <6rvf8s$bo3$1@nnrp1.dejanews.com>,
mastertrenchtick@hotmail.com, man without a clue, babbles:

>You know Ms. Cluck-Cluck, I owe you an apology. You did go to school.
As a
>matter of fact, you went to school with a cousin of mine. Get out your high
>school yearbook! Not from your senior year! I sure hope you have a yearbook
>for the class of '61. Find Sharon Dotson. Sharon is my 2nd Cousin. She is
>my mother's first cousin. Isn't that interesting. We even went to visit out
>there one summer. Rains all the time in that stinking place.

Wrong again, "sherlock!" Wrong state, now you've only got 48 more to guess
which one is the correct one. Sharon Dotson, never heard of her. "out there" is
where you continually inhabit.

> You were a
>wise man to get the hell out of there. No, I won't tell anyone where:
>
>E _ _ a High School is located. That is your private business.

Knock yourself out. Tell them where it is located. The high school I went to
has 10 letters in it's name. You're just eat up that I won't tell you where I
went to school, aren't you? Bah! The fact is, a high school dropout like you
couldn't have any credibility anywhere or anytime.

>However, I do have to give you a light tap-tap on your delicate posterior

Homosexual tendencies, there fatass?

> for
>knocking 10 years off of your age. Class of '62 doesn't make you 43, Ms.
>Cluck-Cluck.

Yeah, since 1) I didn't graduate from high school in 1962, 2) I was born in the
mid-1950's and 3) You are one ignorant bastard. A light tap-tap with your
tongue on my posterior is more your style.

> Well, Michigan sure is a long way from E _ _ _ and I think you
>were wise to make the trip.

I wouldn't know, I've never been to Michigan. Try harder, you might get a clue
a couple of eons from now.

>You know, Ms. Cluck-Cluck, they have some damned
>good rock bands in the Rochester Hills area. I have a cousin who lives up
>there.

Suuuuure you do. I'll even bet he's an inbred, just like you!

>He says there was once a Chinese fellow named Leong Jin Tai who lived
>around there. He was a hell of a guitarist and he loved to quote "The Tao".
>He did a little repo work on the side for a great big company that wants all
>their customers to make their payments on time. Ever hear of that guy, Ms.
>Cluck-Cluck?

Nope. But keep speculating, it's always fun to watch a dog chase it's tail.

> By the way, ever keep in touch with family? You know, like C _
>_ _ _ _ _ e, Class of '67? Nice looking girl, back then. I hope she didn't
>get fat.

You mean like that mamma of yours? The fat whore.

>Naw, you never heard of any of this. And there's more, Ms. Cluck-Cluck.
>There's a whole lot more. So, do you want to tango, Ms. Cluck-Cluck? Maybe
>we should consider "chilling out", as the kids like to say. You would be
>surprised what:
>
>P _ _ _ _ a

Bwhahahahahahahahahahahahahahahahahaha. Pizza flunky, you're gonna burn those pizzas if you don't pay more attention. You love to speculate and think you have the correct information. Too bad you can't produce, because like everything else you've done in your life, you've failed.

>has to say about all this. She says you have been behaving very much in
>character for a naughty Ms. Cluck-Cluck. She is one talkative lady. I find
>myself strangely attracted to her. I'm sure you felt the same way at one
>time, not too many years ago.

Bwhahahahahahahahahahahahahaha.. You've amassed quite a bit of wrong information there, fat flunky boy.

>I can tell you this much, Ms. Cluck-Cluck. I will never divulge or threaten
>to divulge any private information about you or your family. You really do
>have a right to your privacy. But next time you threaten someone in that way
>(and I have many postings of yours that do just that) you should remember
>that all of us want the Right to Privacy. Yes, I have quite a package of
>info here, Ms. Cluck-Cluck. But it is all in the public domain and I still
>won't hack you up with it, no matter what you do or say.

Go right ahead, the info is all lies. Oh, and how have I supposedly threatened you, pussy?

> And if the shoe was
>on the other foot, you would be tearing me a new rectal Oris face. And you
>know it.

Stupid, that's exactly what I have been doing, pizza boy manager suckup.

> So you can keep flaming and going bonkers. But don't ever kid
>yourself into thinking you are the invisible "man". We all are people with
>lives and family away from this screwball playpen called the Internet.

Knock yourself out, all the info you have is wrong. The only family that will have anything to do with you are those other flunkies at the pizza shop.

>So think about all this the next time you are making threats about writing to
>someone's employer and sending remarks to this organization or that. You
>have said a lot of things that might not go down so well with your employer.

Damn, flunky boy, who do you think I passed your gems of babbling incoherency onto. They summized that you are either one low self-esteemed little vagrant, or mentally challenged. I'd say Domino's would be very interested in how one of it's employees is presenting himself to the public. Oh, well, there's another job you've gotten fired from.

>You have a glass house, too, Ms. Cluck-Cluck. Now straighten up and fly
>right. Maybe you will pass that test by October 1st. Tell you what, I'll
>send you the $10 gift certificate, no wager required, if you pass. I think
>it might be a riot listening to you on the radio if you display the same
>traits you have displayed in here. How about a certificate for a free order
>of bread sticks to go with any large, two-topping pizza, you purchase at
>Domino's? I can send you one of those right now, just for being a nice,
>tame, domesticated Ms. Cluck-Cluck. Doesn't that sound fair.

You'd better hope I don't take you up on the informing your employers as to your behavior and representing their company in such a negative manner. Pray, flunky, pray.

>Good Luck, Ms. Cluck-Cluck.
>
>P.S. OHHHHHH those atrocious grades at S _ _ _ _ _ _ U. ! I was right about
>Freshman Composition, Ms. Cluck-Cluck. Shame, Shame!

Bwhahahahahahahahahahahahahahaha. Grades are not in the public domain, you lying sack of shit. You have to obtain permission to get them, so I know you're a liar, pizza flunky boy. Of course, one would expect complaints from somebody who has trouble reading and writing, and expects the adbridged version because they're too illiterate to read. How did you ever fill out that job application form? Did they have to read it to you and write down your mumbling answers? Hey, I heard that once, you went on a 14-day diet and all you lost was two weeks!

Hi,
I am having a little trouble designing a 100mW transmitter. Could someone
please consider the following and advise me of any error ?

The specs are :
Vcc = 5V, F = 300mHz, Po = 100mW, Rsource = 50, Rload = 50.
Device = MRF559
Cout = 2pF, Zin = 6.5 - j20 (extrapolated from specs given at 400mHz)

Rout = Sqr(Vcc - Vcesat) / (2 x Po) = 101 Ohms

Output match is L-Match from 101 to 50 Ohms.
Values for match : Par C = 5.2pF, Series L = 26nH.
Par C adjusted to account for 2pF Cout = 3.2pF.
Coupling to load via 1nF cap.

1uH RFC from collector to Vcc.

Base Bias = 1uH RFC to ground.

Input match is L-Match from 50 to 6.5 Ohms
par C at source = 27pF , Series L = 19.2nH (after absorbing -j20).

Coupling to source via 1nF cap.

Please email response to

d.huisman@niwa.cri.nz

Regards
Dave Huisman

2357. Re: Early U.S. Amateur code proficiency requirements

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-26 00:00:00 UTC
From: "Robert G. Schaffrath, N2JTX" <rschaffrath@acm.org>
Message-ID: <35E36C08.7CC5@acm.org>
Source record: 163773
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

Interesting article on the evolution of morse code speed requirements.
I
have a copy of the ARRL's 1934 edition of the "Radio Amateur's
Handbook".
In the appendix they have published what was later to become FCC Part
97.
It is interesting to read sections 403 and 404 of rules which cover
license classes and testing requirement. These were drafted by the FRC
(the FCC's predecessor):

403. There shall be but one main class of amateur operator's license
to be known as "amateur class" but each such license shall be
limited
in scope by the signature of the examining officer opposite the
particular class or classes of privileges which apply, as follows:

Class A. Unlimited privileges

Class B. Unimited Radiotelegraph privileges. Limited in
the operation of radiotelephone amateur stations
to the following bands of frequencies: 1800 to 2000
kilocycles; 28,000 to 28,500 kilocycles; 56,000 to
60,000 kilocycles; 400,000 to 401,000 kilocycles.

Class C. Same as Class B privileges, except that the Commission
may require the licensee to appear at an examining point
for a supervisory written examination and practical code
test during the license term. Failing to appear for
examination when directed to do so, or failing to pass the
supervisor examination, the license help will be cancelled
and the holder will not be issued another license of the
Class C privileges.

404. The scope of exminations for amateur operators' licenses shall
be based on the class of privileges the applicant desires, as
follows:

Class A. To be eligible for examination for the Class A amateur
operator's privileges, the applicant must have been a
licensed amateur operator for at least one year and must
personally appear at one of the Commission's examining
offices, and take the supervisory written examination and
code test. (See Rules 2 (2) a, 30 and 408.) Examinations
will be conducted at Washington, D.C., on Thursday of each
week, and at each radio district office of the Commission

on the days designated by the Inspector-in-Charge of such
offices. In addition, examinations will be held quarterly
in the examining cities listed in Rule 30 on the dates to
be
designated by the Inspector-in-Charge of the radio
district
in which the examining city is situated. The examination
will include the following:

(a) Applicant's ability to send and receive in plain
language messages in the Continental Morse Code
(5 characters to the word) at a speed of not less
than 10 words per minute.
(b) Technical knowledge of amateur radio apparatus, both
telegraph and telephone.
(c) Knowledge of the provisions of the Communications Act
of 1934, subsequent acts, treatiesm and rules and
regulations of the Federal Communications Commission,
affecting amateur licenses.

Class B. The requirements for the Class B amateur operator's
privileges
are similar to those of Class A, except that no experience
is required and the questions on radiotelephone apparatus
are
not so comprehensive in scope.

Class C. The requirements for the Class C amateur operator's
privileges
shall be the same as for the Class B except the
examination
will be given by mail. To be eligible for this class of
privileges, an applicant must reside more than 125 miles
(airline) from Washington, D.C., a radio district office
of
the Commission, or an examining city. (See Rules 2 (2) b,
30, and 408.)

What the ARRL is proposing is similar especially with the names Class A,
Class B and Class C although with different privileges.

2361. FS: ADI rigs, amplifier, TNC, 220 HT

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-26 00:00:00 UTC
From: ke6qmj@hotmail.com
Message-ID: <6rvv9oucv1@nnrp1.dejanews.com>
Source record: 163777

I have the following items for sale:

ADI AR-146 -- 2 Meter mobile, 50 watts out, encode and decode built-in. Radio is in good condition and has been well taken care of. Asking $140 plus shipping.

ADI AT-600 -- Dualband 2M/440 HT. A great radio! Lots of bells and whistles! Includes 5-watt battery and wall charger. Asking $245 plus shipping.

Kantronics KPC-2 TNC -- Currently set up to operate with the AR-146 (all cables for connection to AR-146 included if needed). Asking $50 plus shipping.

Palomar "Skipper 300" Amplifier (110 Volts) -- 12/10 Meter amplifier. Does about 500 Watts out with 10-12 watts in -- perfect for a RCI-2950 or HR-2600. The tubes work, but are somewhat on the weak side -- it takes about 30 minutes of warm up to get full output. Asking $100 plus shipping.

Icom IC-3SAT, 220 MHz HT -- Nice, small 220 handheld with internal NiCad battery. Asking $350.

E-mail <ke6qmj@hotmail.com> if intrested.

>There is no such law in the USA, and legal problems could only occur if
>possession of such equipment was supporting evidence in a case charging
>illegal usage.

That's why you don't use it if you expect to stay out of trouble. Know
what I mean?

>Why did you make this claim???

Because I might have stopped some "buff" from ending up in tomorrow's
paper. That's all.

>> The premise is that you SHOULD NOT have equipment capable of
>> transmitting on these frequencies...

>Whose premise, since there is no law prohibiting this??

It only becomes illegal if you use the equipment outside of the range
it was type accepted for. It's a POTENTIAL problem. Adding that diode
doesn't make you a criminal. Once you use it out of band, you still
aren't a criminal, per se (unless you jam something) but you have
something that is not allowed to have made that transmission.

Of course, there is no "radio police" so the only problem is when the
equipment is taken by someone who believes they are. Generally, the
only reason to confiscate such a radio is based on not being type
accepted.

>The capabilities that I choose to enable or add on to my personal-use
>radio equipment is my concern alone.
>However, I agree it would be gross
>stupidity to ever, ever use such equipment on frequencies where it is
>not welcome. I think it is evident that the ham who did so in San Diego

>excuse to try it out. And public safety frequencies are not the place
>for over-enthusiatic radio operators to crowd and confuse with their
>"emergency" reports of highway fenderbenders et al.

Maybe we need to do something about making amateur radio more accessible to PSAPs? This could be bad, too, because there would be people cruising up & down reporting all of the disabled on the shoulder over it.

>OTOH, a poll of equipment used by MANY MANY public safety volunteer >organizations (fire departments, rescue squads, etc.) would reveal a >large amount of ham equipment modified for use on public safety >channels.

That's their perogative, although it says something about the price and availability of "commercial" equipment.

>Let's hope no one starts a self-righteous crusade against this until it >is shown that a problem is actually resulting from such "gray-area" >usage.

Generally, there is no problem in the gray zone. As a ham, myself, I think the biggest problem is with illicit 10 meter operation and in some metropolitan areas (like NYC) various radio dealers sell two meter radios to taxi fleets and other enterprises.

As a public safety provider, I would be understanding to a point, especially if this resulted in a save- but I couldn't vouch for my non-ham colleagues! I have zero-tolerance for abuse.

Every once in a while this issue pops up and there are a lot of "What if"s and a lot of misinformation about what can and can't happen - especially with the R&Rs. And, like now, it's discussed into the ground. I really don't care how an individual uses their equipment - that's up to them! It would be a shame if people who didn't think twice about any consequences of their actions get into trouble, even if it was because of overzealous enforcement thinking the R&Rs are within the scope of local authority.

Take care Mike,

Steve

>machine at the airport? Will it cause the memory chip to have problems.

The hand-carry baggage X-ray hasn't hurt my Yaesu FT-50R. Of course,
maybe the laptop PC was shielding the HT. (Does anyone know if the X-ray
machine fires downwards or upwards? If upwards, then the laptop is
shielding. If downwards, then the HT gets the X-ray.)

The checked baggage X-ray (which is more powerful) hasn't hurt my Yaesu
FT-8500 with the Mr. Potato-Head mike. But then again, the radio has a
metal case. But the mike doesn't, and it works OK after air-flights.

Source record: 163784

I agree here, I have owned a IC-Q7A for about two months now, and I
really like this little rig as a scanner as well as a good HT. But I would
also like to see a better clip for it. The only thing that I like about the
factory clip is it keeps the HT out from your side. Which on a big guy
like me keeps the HT antenna from poking you. The fix for that is a new
flexi antenna I know, but I would like to know if there are other clips, and
or if anyone is gonna work on any for the radio.

Cross-posted to: sci.astro,sci.astro.amateur,rec.radio.shortwave,rec.radio.amateur.misc

/\

MIDDLE LATITUDE AURORAL ACTIVITY WARNING

WATCH UPGRADED TO A WARNING. ISSUED: 23:15 UTC, 25 AUGUST

/\

VALID BEGINNING AT: 06:00 UTC ON 26 AUGUST
VALID UNTIL: 19:00 UTC ON 28 AUGUST

HIGH RISK PERIOD: 26 - 27 AUG (UTC days)
MODERATE RISK PERIOD: 28 AUG

PREDICTED ACTIVITY INDICES: 80, 60, 22, 12 (26 AUG - 29 AUG)
(INPUT INTO THE PREDICTIVE AURORA SOFTWARE *)

POTENTIAL MAGNITUDE OF MIDDLE LATITUDE AURORAL ACTIVITY: HIGH TO VERY
HIGH

POTENTIAL DURATION OF THIS ACTIVITY: MAIN BELT = 24 TO 36 HOURS
MINOR BELT = 48 HOURS

ESTIMATED OPTIMUM OBSERVING CONDITIONS: NEAR LOCAL MIDNIGHT

EXPECTED LUNAR INTERFERENCE: NIL NEAR AND AFTER LOCAL MIDNIGHT

OVERALL OPPORTUNITY FOR OBSERVATIONS FROM MIDDLE LATITUDES: GOOD TO VERY
GOOD

AURORAL ACTIVITY MAY BE OBSERVED APPROXIMATELY NORTH OF A LINE FROM...

NORTHERN CALIFORNIA TO NORTHERN UTAH TO NORTHERN COLORADO TO
NORTHERN
KANSAS TO MISSOURI TO KENTUCKY AND POSSIBLY NORTHERN TENNESSEE TO
NORTH CAROLINA.

ACTIVITY MAY ALSO BE OBSERVED APPROXIMATELY NORTH OF A LINE FROM...

CENTRAL FRANCE TO SOUTHERN GERMANY TO NORTHERN CZECHOSLOVAKIA TO
CENTRAL POLAND TO NOTHERN RUSSIA INCLUDING ALL OF GREAT BRITAIN,
ALL
OF IRELAND, ALL OF NORWAY, ALL OF SWEDEN AND ALL OF FINLAND.
OBSERVATIONS OF STRONG ACTIVITY WILL ALSO BE POSSIBLE FROM NEW
ZEALAND AND EXTREME SOUTHERN AUSTRALIA.

NOTE: Serious observers interested in real-time conditions are encouraged
to investigate the SWARM software at:

http://solar.uleth.ca/solar/www/swarm.html

SYNOPSIS...

A major coronal mass ejection is thought to be in-transit to the
Earth
following yesterdays major class X1.1/3B proton flare. The arrival of
this
disturbance is expected anytime between 06:00 UTC on 26 August and 24:00
UTC
on 26 August, with a preference between 12:00 and 18:00 UTC on 26 August.
Auroral activity is expected to rapidly reach major to severe storm levels
immediately to a few hours after the arrival of the shock front associated
with the coronal mass ejection. If conditions are as favorable as we
expect
them to become, visible auroral actiivty (at times very intense) could
become
visible as far south as northern California, Colorado, Kansas and North
Carolina (see above). This is expected to be the strongest auroral storm
so
far this solar cycle. Whether it will reach that expectation remains to be
seen, but the potential certainly exists.

Observers in North America should therefore watch closely for
activity
during the extreme pre-dawn hours of 26 August and during the evening of
26/27 August. The main phase of this disturbance could approach 24 hours
in
duration, providing most of the Earth's middle latitude regions with a
good
opportunity to observe activity.

The moon will also be out of the sky near and after local midnight,
which will provide optimum dark-sky conditions for observing this event.
As a
result, auroral activity may be observed much farther south than would
otherwise be possible. A low latitude auroral activity watch is also being
issued to support this event.

This warning will remain in effect until 19:00 UTC on 28 August. It
will then be updated or allowed to expire.

Near real-time POLAR spacecraft auroral imagery is available at:
http://solar.uleth.ca/solar
in the Aurora section (or see the side panel).

PLEASE REPORT OBSERVATIONS OF AURORAL ACTIVITY TO:
http://solar.uleth.ca/solar/www/auroras.html

** End of Warning **

> and there is a law against using ham radio equipment on the public safety
> frequencies. If the equipment is not type accepted or approved by the FCC
> then it is illegal to use it on those frequencies.

Actually, my statement is TOTALLY TRUE. I think what you mean is that the usage described is improper, and technically, I agree. It is NOT legal to use equipment on the PS frequencies that is not FCC approved or accepted for that use. The legal issues notwithstanding, modified ham equipment IS in very common use within MANY volunteer public service agencies. I was describing fact, not law.

While this "apology" seems to be from this reprobate I know that it is not likely so. To begin with, it is too well written and contains none of the grammatical errors which are the hallmark of covert62. This "apology" was obviously authored by a person who was sober and in full control of his/her faculties....this is not something for which covert62 is so widely renowned. Even if this missive did by some odd twist of fate come from covert62, I would not accept his apology unless it was accompanied by a certification from a bona fide mental institution attesting that he had been genuinely rehabilitated. (make that TWO certifications...I always require a second opinion!).
It is because of people such as covert62 that mental health facilities are constantly over booked.......but, hey! They enjoy job security, do they not? After all, maybe covert62
could take up basket weaving and be a contributing member of society.

2379. How to reset PLL on HTX-202

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-27 00:00:00 UTC
From: jpoulin@honk.org
Message-ID: <6s3nh1$83m$1@nnrp1.dejanews.com>
Source record: 163490

I would really like to get to the bottom of an onging
problem with the HTX-202 Radios, that many people are
experiencing.

The error "ER2" normaly displays when the PLL curcuit
becomes unlocked.

Now my HTX-202 displays ER2 in receive mode. The minute
I turn on the radio BANG! .. ER2

I called Radio Shack, and they said to bring it in for
servicing, however the service centre in eastern Canada is
backlogged, and I dont want to wait.

Does anyone know how to reset the PLL curcuit on this
radio ?

I have tried the CPU reset (Function-CLR) during POWER-UP
but it did not help.

I would much rather do a quick fix, rather than sending
it to RS.

Any help would be greatly appreciated.

I know about the part in PART 97. As I stated this has been redefined by the FCC to pertain ONLY to the ham bands. I was asking about a Blanket ruling that pertains to other frequencies. I don't think there will be one to be found. The FCC seems to have tried to make it clear that people are NOT to use just any radio to transmitt even under emergency conditions.

Scott,

Well said. Elmering is an aspect of the hobby/service that is not being given adequate attention.

Today, many folks get into amateur radio by reading a book or attending a class, perhaps over a weekend. As Hams, we first learn of their existence by talking with them over the air. As you've pointed out, the new Hams learn 'operating procedures' by imitating the other Hams they listen to or talk with, or, bring along habits from other radio services/experiences.

Equipment-wise, getting on amateur radio is easier than ever. Several decades ago, it took some different skills: stringing up HF antennas, dipping finals, peaking loading circuits -- operating was much akin to driving a standard transmission car. Now, we have a lot of automation. Society is much more mobile.

I don't have an answer to the Elmering problem; however, I would encourage every club to wrestle with this issue and implement some form of managed Elmering.

'Habits' of the scale that you're referring to will take a generation or more to undo. Consider drivers who run red lights! Various levels of enforcement are being attempted, but, I haven't seen any change. That, too, will take time. But, I should add that whatever words are spoken or transmitted via whatever means, if they are understood by the receiver, I don't mind if they're Q-signals, abbreviations, etc. On Networks, the appropriate rules and disciplines should be observed. If 10-signals are inappropriate, then don't use them. Plain language on most nets is the rule, because it's more than a one-on-one contact.

Accents and slang can sometimes cause problems. Plain language to one person may not be 'plain language' to another. I've listened to some voice traffic nets in which the participants couldn't seem to understand each other until one person used a spoken Q-signal and the other fellow finally understood. As Hams, we enjoy versatility which enables us to get the job done.

I enjoyed the way you phrased the discussion of 'pet peeves' on your local repeater. Some don't like spoken Q-signals; others don't like 10-codes; some dispise slang; some folks refuse to talk with others from different parts of the country or the world. There's nothing in Part 97 that restricts any of the above. But, as Hams, it behooves us to standardize in order to make our communications effective. We can't just say "Oh I read about those ITU Phonetics, but, you can use any

kinda words, just so they begin with the correct letter!" The standards aren't there to satisfy some beaurocrats ego; they're proven over time and various conditions.

There are a number of 'good operating practices' which have been published for years, and, experience has shown to be effective. I think that most new Hams, at least those without Elmers who know about these practices, do not learn about such practices/techniques. Daily conversations on repeaters or HF seldom require the need for strict discipline -- just a basic following of the rules (i.e., IDing). It's when these new Hams are thrust into a situation requiring discipline, that communications becomes a Tower of Babel. That's when discipline, or standardization, becomes a powerful tool.

Scott, thanks for opening this discussion. Hopefully others will follow with their comments.

Nor is it the way that they have ever interpreted it. 97.403
only waives Part 97 rules, not the rules of any other radio
service. When operating in another radio service, which
you would be if you operated on a police frequency, you
are subject to the rules for that radio service, amateur
rules, including 97.403, don't apply.

TED:
If you will READ completely the single rule 97.403 you quoted, it says:
"No provision of these rules prevents the use by an amateur station of any means of radiocommunication at its disposal to provide essential communications needs in connection with ... when normal communication systems are not available." Be sure you have a current version of Part 97, as the wording of this one changed in recent years. I just grabbed this one from the FCC web page.
Note the fourth and fifth words, "these rules". They refer to Part 97 Subpart E, which is entitled "Providing Emergency Communications", not to all of 47CFR. Other US Governmental rules, such as 47CFR2, which includes a requirement for radio type acceptance, and 47CFR90, which establishes eligibility requirements for public safety and other license applicants STILL DO APPLY! So does the remainder of Part 97, including the amateur frequency band definitions. Also note the last phrase of your quoted section, then read 97.401a and b which define the specific conditions under which such operations may be undertaken. It does NOT alow for the "I'm too far away from a pay-phone" or "My cellular phone was out of range" excuses.

Who is this KC8JBO?? Roger Wiseman. This loser doesn't even have an HF license yet. He is in the same boat as a lot of other hams. SO, WHAT DOES EVEN KNOW ABOUT THE LIBERTY NET?

If you have a problem with the Liberty Net, or anything else on amateur radio, just IGNORE IT!! Don't listen if you get so pissed.

I need some help for a friend. He just picked up a FT-73r, and wanted to mod it so that he could listen to his businesses freq but not x-mit on it. However, the radio dosen't work much outside of it's designed limits. RX drops off pretty fast. He says that there's a pot inside that'll widen the radio's RX and TX up. But without the service manual, figuring out which it is isn't easy. Can anyone help him out? He dosen't have internet access, nor even a home computer, so I'll relay messages for him.
P.S., if you think he's doing this to mess around with other freqs, he's most definately not. He's 67, and he's a Vet who strongly believes in not breaking the law. I've known him long anough to know that he's straignt. Besides, as a precaution, he's going to set the Tx freq to something so far out of band that TX power will be 0 watts. With this ht, that's easy.

I replaced my Q7 belt clip with a piece of coat hanger wire.
I bent it to a shape similar to clips on other radios with a "lip" at
the bottom to easily slide on the belt. The wire curves about 200
degrees at the top and inserts into the Q7's opening from the top down,
the opposite of the ICOM factory clip but similar to other clips.
The raw ends of the wire are each bent outward, about 1/16", and the
rough edges filed down.
The little ears go under the Q7 opening to hold it in place, and since
I made it to "spring" outward against the sides of the opening, it stays snug.
If added safety is desired, a small piece of rubber pushed in the space
between the wires will prevent any removal of the wires. Use heat shrink
tubing (real small diameter!) if you prefer to have the clip match the radio
color. Best part is that you can make this any length you want.
I made mine long, to go nearly to the bottom of the radio.

James:

I've just recently noticed the same exact error message on MY '202. But...

It only occurs when I'm using the radio's battery. Bought a new battery and that's when it started occurring.

Now, curiously, when I run it from my vehicle's battery, it works like a champ. OK, so I can believe that there's something not quite right with the new battery..

Have you tried running it from something other than your radio's battery?

Hmmm.... the PLL error is almost certainly because the PLL can't lock-up,
and this in turn is almost certainly because the VCO is aging and/or
failing. You may be able to repair this by re-aligning the VCO, however
the voltage-sensitivity is worse. I can't remember if the VCO on the
'202 has an individual voltage regulator; if so, that may be failing,
otherwise, the new battery just doesn't supply enough voltage to the
VCO - have you verified that the battery has the correct terminal voltage
after charging it?

O.K., this can be argued for eternity. Question is how can you legally test to see if the mod works and is receivable by others? You can't do it unless there is a life threatening situation and you are unable contact anyone on any other freq.

Boy I sure do miss the "fake" lib net. He at least could communicate.
This "new" libnet is so stupid he would make a rock look smart.
No matter what you say to him/it, he just does not understand. All
he think's about is bringing up more jammers, telling lies about anyone
he does not like, and then acting like the complete fool he is. I
actually feel sorry for him. In case you can't figgure it out, let me
help a bit. My retraction was "FROM THE PUBLISHER". I never said it
was a lie, you did.

Hey Scott,

It certainly is refreshing to see a new ham actually interested in learning about the "proper way of using ham radio". In the old days the newer ham's were indeed "elmered" by the older hams. This is the way it should be. Unfortunatly today, with the prevailing attitude in society as a whole, that we new guy's know it all. Most of us have just given up. When we try and correct someone, normally we get cussed at and called names. It even happen's right here on this NG. I can't even recommend you listen to the older hams. We are just as bad in many cases. All I can say is this....think about' ham radio as the world's largest party line. Think of it as a party of strangers in a big room. Don't say anything you would be ashamed of in mixed company, and take a listen to the traffic nets on 75. They normally act decently.

Good luck

I need some club info if someone can please help. I have been a member for a few years now. I am a USA member. I am vacationing and need to renew my number for the AT group but have no information where I am at. Can someone e-mail me TOTAL cost for RENEWAL AND DIRECTORY and include price for AIR mail which is how I want it to be sent.

I would appreciate it very much as the renewal is soon to come to an end. MANY thanks and happy DXing.

2416. Mounting of 2m Ant on a CJ-5 Jeep ??

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-27 00:00:00 UTC
From: James Nipper <jnipper@southeast.net>
Message-ID: <35E5DD98.5800@southeast.net>
Source record: 163527

I would like to mount a 2m antenna on my Jeep CJ-5. This is a small jeep, with a soft, rag-top. There is no way to mount an antenna on "top " of the jeep. I had hoped to figure out some way to mount it on the rear mount which holds the spare tire, but have not found a standard way to do it.

I could place a mount on the back bumper, but the entire antenna would be "blocked" by the vehicle.

Any ideas on this one ???

Thanks in advance for any ideas or suggestions..

2417. Upcoming Gordon West Class in Socal

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-27 00:00:00 UTC
From: "Julian M. Frost" <jfrost@odaiko.ss.uci.edu>
Message-ID: <Pine.LNX.3.96.980827153358.4428B-100000@odaiko.ss.uci.edu>
Source record: 163528

Gordon West Radio School Presents:

A
General 13-wpm Morse Code
And Theory Review Class

October 10th & 11th 1998 (San Diego, CA)

General 13-wpm Morse Code and Theory Review Class - 10/10/98 and 10/11/98
==========

Location: West Marine, San Diego, CA.

This class is for mariners that want to upgrade to the General Class license, but like many people, find the 13wpm Morse Code requirement their biggest stumbling block! Make 1998 your year to upgrade. Don't let the Code hold you back any longer, the Worldwide HF bands are waiting for you. In fun, stress-free way, your instructor will take you from a shaky 8-wpm all the way up to 13-wpm, or higher, in preparation for your exam on Sunday afternoon! Techniques in passing the CW exam will be taught, and there will be multiple demonstrations showing just how easy it is for YOU to pass the 13-wpm, or even the 20-wpm code exam! Theory review sessions are held throughout the two days to help make passing the written exam even easier. Students that pre-register will receive the Gordon West "General Class" textbook, Gordo's exclusive CW tapes, and a special pre-study package. The class fee includes sixteen hours of tuition, beverages and lunch on both days and a barbecue on Saturday evening. General Class students join Gordo and his No-Code Technician class for an operating session and workshop dedicated to installing, using and maintaining ham radio equipment aboard yachts and powerboats.

--==--

Weekend courses include:
o Beverages, snacks and lunches
o Saturday night "Operating Session" with Gordon West
o Home study package consisting of CW tapes, book and
computer software
o Audio tapes for home study
o Sample test preparation exams, just like the real thing
o Multiple code test-passing opportunities

Only Prerequisite: All students must be able to copy code at 8-WPM prior to coming to class.

For full details on either of the classes described above, please call Gordon West at (714) 549-5000 between 10am and 4pm, Monday through Friday.

Jim:

On my CJ-7 (same as your's but a bit longer, as I understand it), I placed a magmount on the hood for 2 meters, a Hustler ball mount (with a foldover mast for HF) on the left rear quarter, and another Hustler ball/spring mount on the front bumper.

Looked pretty strange, but, hey, it worked well.

>"f"? Yep. Ms. "That was a typo" really doesn't know a typo from a spelling
>error.

Sure, it's quite obvious that it's a spelling error..

That's living proof that KC8JBO failed Freshman Composites at S E _ _
>_ L E University. That was an obvious typo "plant" to prove a point, MORON.

Suuuure it was, Severe Learning Disabled toilet cleaner. Sure it was.

>The Mt. Killamanjarmo point on the tippy-top of your head isn't functioning

You mean "Mt. Kilimanjaro," don't you, dunce. Thought so.

>too well. Any fool would have picked that out as a typo even if they didn't
>see it was an obvious "plant". So run with it a little further, Guppy.

The only "plant life" in here is you, illiterate moron. Sure it was a typo,
sure it was. You sure do have more than your share of them, functional

illiterate.

><quote>BWAAAAAAAAHAHAHAHAHAHAHA</quote>
>
>You lose again as always.

No, and your boss might not want to lose his Domino's franchise over an idiot like yourself. Many thousands of dollars vs. a minimum-wage suckboy, I think you can figure out what his best interest would be. Well, maybe not.

>You ADD won't allow you to pick up on any
>subtlety.

"You ADD,?" hahahahahahahahahahahahahahahahahahahahahahahahahahahahahahaha
Your are about as "subtle" as an elephant in an expensive china shop. And since you physically resemble the elephant, it's surprising there is anything left in your pizza shop, flunky boy.

> And I am using that fact to clean up the newsgroup "streets" with
>you.

Bwhahahahahahahahahahahahahahahahahahahahahahahahahahahahahahahahahaha
A fatassed, deformed troglydyke <spelling intentional, fool) who got kicked out of school and can't do any better than a minimum-wage job can barely exist, much less clean up a newsgroup. I'm not the one who got stung so bad they had to call me up and cuss me out, little one. Did the big, bad, KC8JBO hurt you wittle feelings? You'll get over it, or die with it. It's immaterial to me what you do. The lack of education of the flunky pizza tosser is quite obvious.

> Go back to school and finish that BA.

Stupid, I already have a Bachelor of Arts. It's so sad you're in your twenties and you're still trying to complete high school. So, so sad.

> I'll have my GED before you get
>a General License. October 1st is still a long way off. Come on retard,
>take my wager.

Sheyah, right. Like I would believe a convict. I'll be on social security for 20 years before you get your G.E.D. If you hadn't screwed up in high school, you wouldn't be almost 30 and still trying to pass high school level courses.

>I'll send the Domino's $10 Gift Certificate to W4NTI. What's wrong? Afraid
>lard-ass VIETNAM DAN will eat it up and you will lose your chance at it. I

Hi,

SQR is a programming function and stands for Square. (Not square root ,
which is usually expressed SQRT).

ie. Pout = (Vce) x (Vce) / (2 x Rl) = 0.1 W

I am not getting 0.1 W out.

Do you have any other possibilities I could explore.

Regards
Dave Huisman

>relatively simple, way to tie in to the battery?

In situations like you describe, it's often easier (not cheaper though) to go to one of the places that install high output audio circuitry, and let one of the installers wire you up. BTW, putting a 50,000 uf cap in parallel with a .01 cap seems to lessen some problems in powering the rig as you fire it up too, which is also a standard audio installer trick. I mention this because with airbags on both sides now, if the grommets aren't open, it's difficult to know where to drill except if you do it regularly for a living. You can also try a Honda or Acura dealer for the same service and about the same cost in labor and about the same results.

>You better get back to threatening people's credit rating with your access to
>TRW's credit system. Just do it one more time. I am begging you to do it.
>See who gets a copy of it.

You have no credibility, phone calling coward. It did give us a good laugh,
however.
The police even thought you should be one of "America's Dumbest Criminals."

>> Knock yourself out, all the info you have is wrong.
>
>No, Ms. Cluck-Cluck. It is public information and it is right. Anyone need
>confirmation? e-mail: mastertrenchtick@hotmail.com

Sheyeah, right. A coward who makes prank phone calls has credibility.

>>>The only family that will have anything to do with you are those other
>>>flunkies at the pizza shop.
>>
>
>My friends at the shop love me. They say I am changing the hole image of
>Domino's in this neighborhood.

I'll bet they love you, anybody as stupid as you are makes them look good.
Yeah, you are making them into ASS-"holes." Is that the "hole" image you mean,
illiterate fool?

>They back me up all the time, anywhere they
>can.

In other words, they cover up for your mistakes. You can't even bake a pizza
right, can you, fatass?

I'll bet that you don't have friends like that. Tough talk coming from
>a low level corporate stooge with no future who can't even accept his own age
>of 54. It pretty pathetic when a "man" has to try and lop 10 years off
of
>his age to bolster his inferior ego.
> When I am 54, I will be in Detriot

It's "Detroit," you ignorant ass! And when you're 54, you'll still be Bubba's
butt bitch.

>probly and running Domino's from my limo that is stacked with champain
^^^^^^ "probably," moron.

Stacked or stocked with "champagne." you freaking idiot. Your attempt at communicating in English is quite laughable, pizza shop boy restroom cleaner.

> and
>pure blow and rocks as big as walnuts that will satisfy a man's soul. I'll
>have a dozen hot Detriot bitches at my peck and call begging to be my friend.

Typical drug dealer mentality. I'll archive this for Domino's. I'm sure they have an anti-drug policy in the regulations. Bye, Bye, Davey.....

> I'll keep them as my secretaries in my ass kicking office with at least two
>windows and my own personal shitter in the Domino's Building. The mayor a
>Detriot is going to calling me for favors like hiring his bro's on and free
>pizza for his ass kicking all night blow and rock candy parties. I'll have
>the Piston's all over my house with all their bitches and whores and we'll be
>smoking and freebasins all night in my heart shaped swimming pool getting our
>minds right. That's my future.

Hey, white trash pizza boy suckup, you'll be in prison for making obscene phone calls, or worse. Your future is so dark, you'll need infared to see.

>You better hope that Lynette, Patty "The Cross", Roosevelt "Cass", and King
>Jimmy are not reading your shit tomorrow morning in their e-mail, Ms.
>Cluck-Cluck.

You mean at the corporate site at www.dominos.com???? Already taken care of. Bwhahahahahahahahahahahahahahahahahahahahahahahahahahahahahahahahaha

>Did I say I "saw" those atrocious grades at S E _ _ _ L E U., Ms.
>Cluck-Cluck?
>I never said I saw them. I just said I was right about your Freshman English
>Comp grades. And I am right.

At least I can spell "Detroit" correctly, you inbred, ill-educated, stupid flunky.
And actually, I had a 3.5 average in English Composition I and English Composition 2, you know, what you call "Freshman Comp." Using "Comp" because you know you can't spell the entire word, huh, fatass?

>> Of course, one would expect complaints from somebody
>> who has trouble reading and writing,
>
>Yeah, that's why I could make a career out of correcting your bad grammar
>sentence structure and spelling, Ms. "I perfer".

You mean like:

"are you color blind as well as dead and dumb"
<6rv72d$57$1@nnrp1.dejanews.com>

"probly and running Domino's from my limo that is stacked with champain"
<6s205e$a4r$1@nnrp1.dejanews.com>

>> form? Did they have to read it to you and write down your mumbling answers?
>> Hey, I heard that once, you went on a 14-day diet and all you lost was two
>> weeks!
>
>Throw away that 25-cent joke book. Do you have any original thoughts?
>12,000 posts from: Crow, Raven, Leong Jin Tai, and those other fag names you
assume,
>says you don't have any original thoughts. Same old fag lames? I feed them
>back to you and you are too ADD dense to realize it.

You never answered the question. Did somebody have to read the application to
you? All a coward like you can do is make obscene phone calls with those fat,
greasy fingers. Then you scrounge around that filthy, rat-infested apartment
for leftovers you grep from work.

"are you color blind as well as dead and dumb" babbled the quite illiterate,
pizza boy flunky Libnet in <6rv72d$57$1@nnrp1.dejanews.com>.

2437. Pessegueiro Isl. DXp. Homepage fully updated !

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-27 00:00:00 UTC
From: Jos&#65533; Emanuel Ribeiro de S&#65533; <ct1eeb@mail.telepac.pt>
Message-ID: <01bdd150$3b0df040$53c641c2@host.telepac.pt>
Source record: 163556

Hello,
The Pessegueiro island DX'pedition 1998 IOTA EU-167
Internet Homepage is now FULLY UPDATED and running in
a diferent server...
Please check the next URL:

http://www.qsl.net/cq2p

Among its new features you can find:
---> Our performance in the IOTA Contest (mainpage)
---> Fully statistics by Continent, Regional area and Country (mainpage)
---> DX'pedition photos (notice the amazing "Thunder for Down-Under"
VK6LC phased verticals for 7 Mhz in the photos... its just beautiful
!)
---> Logs Online checking (check if you are in the LOG of CQ2P, the CT1's/p
callsigns (EU-167) and in past NPDXG DX'peditions, all LOGs are
available
for checking now !).

As the regular page uses frames and if your computer gets in
trouble to get thru them or if nothing happens, you can try to
get directly to the matter, so, try the next URLs:

Main page:
http://www.qsl.net/cq2p/main.htm

Photos page:
http://www.qsl.net/cq2p/photos.htm

LOGs online checking:
http://www.qsl.net/cq2p/Online.htm

Ofcourse viewing the full page with frames is better
(http://www.qsl.net/cq2p)

Its all for now...
Thanks for giving us a call to EU-167 and CU in the
next IOTA DX'pedition... !

(QSLs will be mailed very soon)

73 and good DXing,
Jos&#65533; de S&#65533; CT1EEB
DX Editor "Portuguese DX Bulletin"
Dx'peditioner to EU-145, EU-150, EU-167, NA-204

2441. HELP! ICOM HM-98 Microphone Mod.

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-27 00:00:00 UTC
From: "David M. Hitchner, KD5EIS" <NoOne@NoWhere.net>
Message-ID: <6s2hb8$35t@bgtnsc02.worldnet.att.net>
Source record: 163560

I have two radios with the HM-98 mike. I did the mod to reduce the audio level
successfully on one mike. On the second one I messed up and lifted the capacitor
next to R40. I have gotten the mike back into service by placing a full size .22 uf
capacitor on the board and hot gluing it in place. However the audio is readable but
a little distorted. Does anyone know what the correct value for this capacitor is?

Thanks.

2447. Hurricane Frequencies

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-27 00:00:00 UTC
From: snyder@ecom.net
Message-ID: <35e4e1cb.49067339@news.ecom.net>
Source record: 163566
Cross-posted to: rec.radio.amateur.misc,rec.radio.shortwave

With two dangerous storms bumping around in the Atlantic, it is worth repeating that you can find many hurricane-related radio frequencies at the Hurricane Frequencies web site. Bookmark the page now, and it will be there when you need it.

Hurricane Frequencies is a list of more than 200 selected frequencies below 30 MHz that carry hurricane-related traffic during the hurricane season.

Times and frequencies are subject to frequent change, and are listed for reference only. Updates are published as information becomes available.

The list includes
- Amateur radio emergency and disaster nets (ARES, RACES, etc)
- U.S. federal, state and military agencies
- U.S. Coast Guard weather and nets
- National Hurricane Center, FAA, FEMA
- Commercial weather broadcast stations
- SSB, CW, FEC-SITOR and facsimile modes

Several links to current tropical storm information are provided.

2448. Windtrax Balloon Flight

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-27 00:00:00 UTC
From: k9opo@netusa1.ns.net
Message-ID: <6s2pab$31b$1@news.netusa1.net>
Source record: 163567
Cross-posted to: rec.radio.amateur.space,rec.radio.amateur.misc

The Windtrax-21 balloon flight is scheduled to be launched Saturday, August 29, from Eastern Elementary School in Greentown, Indiana. Projected launch time is 7:00 AM EST (1200 UTC). Launch point coordinates are 40-28-32 N/ 85-58-04 W.

Packages and frequencies:

ATV - color camera horizontal view, B/W up view, 439.25mhz, vertical polarization, 1.5 watts peak power.

GPS - APRS format position and telemetry, 446.0 mhz, 750 mw, vertical polarization, 1200 baud AFSK.

Cross-band repeater - 144.3 mhz uplink, 444.850 mhz and 52.525 mhz downlink, all vertical polarization

SSTV will be transmitted on the 439.25 mhz ATV video carrier with 5 KHZ FM deviation.

There will be an HF net on 3857 +/- 10 khz. Listen for W9GO or WB9KWS.

Students will be operating on the cross-band repeater and HF nets, taking check-ins and relaying balloon position reports. All amateurs are invited to check in and chat with the students.

Torres
Although your question is not unlawful and you do note that saving lives is more important, I wish to stress that the American security situation is on high alert in every county in America and every country that is on friendly terms with America.

Amateur radio operators take great pride in radio operations within the law and to its every letter and phrase. Amateur radio operators will be there every time for disasters and civil defense. We hope that whatever you plan to do with this information, that you will do the right thing.

People matter. Your safety matters.
Enjoy the hobby; electronic freedom is not universal.

I just ran your numbers through my matching software and yes it shoud
work excellent!

The question remains why you do not get 100 mW out, assuming you mean
300 MHz not milli Herz as then it would be obvious...

Well you run the stage in C maybe try to see what happens when you
increas the drive power, BTW have you tried to bias the transistor?
Apply 0.5-0.6 volts might do the trick. At least it should be eaisier
to drive.

Hi,
Then, one got tired of CB or somehow got interested in ham radio for
whatever motivation was, s/he passes a few multiple choice questions
test by memorizing or randomly picking answers with little bit of luck.
And then go out in a hurry to buy a
HT maybe from R.S. and start yakking on it. And then after a while,
he want some more, Boo Hoo, I want to go on to HF and pollute the
spectrum globally instead of locally w/o knowing almot nothing how
radios work or to cut a simple dipole antenna. End result? ham radio is
dead.
and manufacturers made lots of money making half-perfect products.
Who cares they don't even know darn thing about radios anyway. All they
care is how many bells and whistles it has and just keep buying newer
ones. They don't even know how to use all the bells and whistles
they've got. Sad thing is most of those manufacturers are from JA land.
I cut off sub. to CQ a long time ago. Nothing worthy to read in it
anyhow. I'll be long gone B4 the total demise of our hobby as
it has been known. If I happen to be still here, I'll live with memory
from the good old days. Just browse any NG, questions we are
encountering is such
an amazing level of ignorance or laziness maybe? I heard a guy was
really upset
because he didn't get a job as a PC tech. at a local store. Owner told
me he did not
even know what IRQ was and he got real mad when the interview was
terminated without
offering him a job.
I often wonder if we're still dealing with vacuum tubes, how many new
hams would have been dead daily from being electrocuted. Thank god we're
in low D.C. powered solid
state era! Still one can get a R.F. burn!!

Anyone have any ideas on why the ops. on this frequency went to the
trouble of getting HF class licenses just so they could play music on
air, jam each other's transmissions, use profane language, and generally
violate part 97? Couldn't this type of transmitting be done on 11
meters just as easily? Is this what amateur radio is all about?
86 the yodeling tapes, guys, they're getting old real fast.

Having read your question and some of the other posts, I have two questions:

1. have you checked with the phone company to see if they already have
something that will work?
2. have you considered using an acoustical coupler instead of a direct
connection?

For a direct connection, a hybrid coupler would be ideal, but by whatever means, isolate the computer from the phone line. Then, with a small value limiting resistor in the output line, back to back zeners could be used to chop off the ring voltage peaks to the sound card. If you are unsure what to do, get assistance locally or ask more questions. It is not easy to tell your level of expertise with the little I can glean from your posting. I get the impression that you know some basic electronics, but don't have working knowledge of the phone system. There are some telephone interface circuits that have been published in magazines that would work. Check your local library for more ideas.

Language police alert. Just as the word "gay" today has a different meaning than when I was growing up, so to does the word "CW". Yes it is a "word" the way we use it today in ham jargon. If I was "happy" today I certainly wouldn't say I was "gay"!! Today saying "I work CW" or "I send CW" means I send or am sending Morse code. (Even though that might not have been correct 50 or a 100 years ago.) Everyone understands this so this is it's present meaning. I don't hear many guys on the bands saying "calling any ham....calling any ham...". That's because we all understand what the word "CQ" means and use it.

Language police alert. Just as the word "gay" today has a different meaning than when I was growing up, so to does the word "CW". Yes it is a "word" the way we use it today in ham jargon. If I was "happy" today I certainly wouldn't say I was "gay"!! Today saying "I work CW" or "I send CW" means I send or am sending Morse code. (Even though that might not have been correct 50 or a 100 years ago.) Everyone understands this so this is it's present meaning. I don't hear many guys on the bands saying "calling any ham....calling any ham...". That's because we all understand what the word "CQ" means and use it.

Hi,

I don't seem to find any comments pro or con about the Yaesu FT-920. Is it not a popular rig? I understand the they sell quite a few at HRO (so says the salesman), but I just wanted some input from people who use one.

Thanks!

Incorrect. CW/Morse code was used as early as the mid-1800's.

Here are some sites to back this statement up:

Well, you might have to take it back to RS for service. Usually, turning the HT off and on resets it Maybe it's a bad chipset in the PLL section.

Thanks for the replys, all.

I'll provide a few more details and clarify my intentions, here.

This circuit is for the purpose of providing my mother, who has lost the ability to speak, with a means to carry on a phone conversation with someone who she calls, or who calls her. The laptop has the ability for text-to-speech; whatever she types will be spoken.

I want to connect a cable from the analog audio output to the telephone line permenantly (well, at least not have to plug and unplug it for each use). If I understand correctly, a hi-impedance transformer primary won't trip the CO connection. This permenant connection is just for convenience.

When I lift the telephone receiver on that line, the CO connection will be established and I can dial the phone number. I can then, during the conversation, add output from the laptop's audio output to the conversation.

I've been told that all modem circuits must handle ringing voltages. Do they disconnect from the CO line with a relay, or do they handle ringing voltages other ways?

Regarding the rest of the circuit: I wasn't planning on anything but a transformer-- hi-Z (10K?) primary, lo-Z (1K?) secondary-- connected

directly to audio output and to the phone line (with ringing voltage components between CO line and primary).

Any suggestions welcome and appreciated.

Thanks,
Dave

Hi,

I'm looking for a good 2m receiver starter kit. I was thinking of the mfj-8400k. Does anyone have any experience with this kit? And what would a good place to buy it? (boy did I just open myself up for some spam :)) What I'm basically looking for is a relatively simple 2m FM receiver, which preferably can be extended later on with AM/SSB/CW etc.. Maybe there are other kits out there that I don't know about and might be better than the one I just mentioned.

Your advise is appreciated!

I sent the following comments to the FCC at <ecfs@fcc.gov>, 'name removed'
because you code haters want to destroy ham radio.

73

<PROCEEDING> 98-143
<DATE> 08/24/98
<NAME> ** name was here **
<DOCUMENT-TYPE> CO
<CONFIDENTIAL> N
<DESCRIPTION> Amateur Radio Restructuring
<NOTIFY> ** e-mail was here **
<TEXT>I am a member of the ARRL and an ARRL accredited volunteer
examiner. However, I am not in favor of nor do I support the
proposal that was submitted by the ARRL to theFCC on the restructuring
of the Amateur Radio service. I do support the restructuring of
the Amateur Radio Service as proposed by the FCC (WT Docket No. 98-143)
and would like to offer the following requested comments:

The Novice class license should be phased out as the Technician
class license has become the entry level license to the service. Former
Novice class HF spectrum should be reclassified for use by General,
Advanced, and Extra class licenses, or remain "as-is" for use by Technician
class licenses(If it is decided that Technician class licensees should have
HF privileges). Power levels for grandfathered Novice and Technician plus
licensees should remain at 200 watts in their sub-bands. The new Technician
license should have the same privileges and examination requirements as the
old Technician plus class licenses. The new Technician license would require
passing Element 1A five WPM morse code exam.

Privatization of Enforcement procedures: I am not sure if enforcement
procedures can be privatized, however, one solution to correcting violations
in the Amateur Radio service would be to try and prevent them from occuring
in the first place. This could be accomplished by requiring candidates pass
a more rigorous Amateur Radio exam. Making an Amateur Radio license harder
to earn, better individuals will hold licenses. If licenses become easier to
obtain, more candidates will be licensed and rules violations and enforcement
problems could increase. Remember, the goal of restructuring is to relieve
some of the burdens the FCC has with the service.

Telegraphy Examination Requirements: I support keeping the telegraphy
requirements unchanged. Element 1A for Technician, Element 1B for General
and Advanced, Element 1C for Extra class. Unfortunately, there are as many
valid reasons for keeping Amateur Radio telegraphy requirements as there are
valid reasons for phasing them out. The telegraphy requirement is a stop-gap

to the Amateur Radio Service and does make a license more difficult to obtain, but when an individual has to work harder for something they tend to appreciate that something a little more and won't abuse it once it has been attained. An Amateur Radio telegraphy requirement can ensure better practices on the ham bands because individuals appreciate the rewards of their hard work.

Examinations: (More comments) A passing score on written examinations should be increased from 70% to 90%. This would increase the difficulty of the exams without requiring the creation of new exams or questions. Another change which would improve the service, would be to require Radio Amateurs seeking license renewal to retest and pass all exam elements required for their license class. This would mean licensed amateurs must stay familier with current service regulations and subject matter.

If you agree send your own comments to the FCC.

I only stated that amateurs have used radios since the 1800's. It's possible
that the statement regarding their use of exclusive CW was incorrect.

HOWEVER, amateurs DID have radios at this time that DID transmit and receive
Morse code, be it Spark, CW, or any other mode. This is what I meant, and
what I should have said in the first place.

ARLB064 Bonnie visits Virginia

ZCZC AG64
QST de W1AW
ARRL Bulletin 64 ARLB064
From ARRL Headquarters
Newington CT August 28, 1998
To all radio amateurs

SB QST ARL ARLB064
ARLB064 Bonnie visits Virginia

Hurricane Bonnie has moved away from North Carolina and now is unleashing her renewed fury on the Tidewater area of Southeastern Virginia. Bonnie was downgraded to a tropical storm Thursday, August 27, and emergency preparations had abated. But the storm picked up steam again as it headed north and regained hurricane status, catching hams and emergency officials off guard. The storm was sitting off the North Carolina/Virginia Border today and was expected to hug the coast on its way to New England.

On August 26, Virginia ARES/RACES activated in anticipation of the storm. Virginia State RACES Officer and ARES SEC Frank Mackey, K4EC, reported that local emergency operation centers were staffed with hams, and many shelters opened in anticipation of evacuations. ARES station W4ZA at the state EOC was activated. As the storm appeared to be losing strength, Mackey reported ham radio operations stood down and shelters were closed. Then, Bonnie changed her mind.

The Tidewater area--including Hampton Roads, Norfolk, Virginia Beach, and Chesapeake--has experienced heavy rain and damaging winds clocked unofficially at more than 100 MPH.

The home of District 9 Emergency Coordinator Cynthia Rohrer, AE4EF, in Chesapeake suffered extensive structural damage, and outbuildings were totally demolished. ''It was impossible for her to get out of their residence due to extensive debris,'' Mackey said. ''Damage from fallen trees and downed power poles appears to be very extensive.'' He said emergency managers and police were asking people to stay off the streets unless absolutely necessary.

Virginia Electric Power reported more than 250,000 customers without power. Officials closed the Chesapeake Bay Bridge Tunnel due to the strong winds. A roof was reported blown off an apartment building in

the Oceanview section of Norfolk.

''The Norfolk area was still reeling under continued battering, higher-than-expected tidal surge coupled with local high tides, and strong winds,'' Mackey said Friday.

SKYWARN and emergency nets remained active in the region.

Meanwhile, in North Carolina, Section Manager Reed Whitten, AB4W, reports many shelters and EOCs had released their Amateur Radio operators, and HF nets went into standby mode. A few EOCs and shelters remain active, and the Tar Heel Emergency Net (3.923/7.232 MHz) was monitoring for them. The net remained in continuous operation for more than two days, providing communication for Emergency Management and relief agencies.

Bonnie could move into the Northeast by the weekend. Hams in the Southeast have been keeping close watch on Hurricane Danielle, which could arrive August 31.

In Texas, meanwhile, the remnants of Tropical Storm Charley flooded parts of South Texas, leaving much of the town of Del Rio near the Rio Grande under water. At least 15 deaths in Texas and Mexico were blamed on the floods. Del Rio remained under a flash flood warning on Thursday, and President Clinton declared Val Verde County a disaster area.

Among the hams known to be passing message traffic with the Del Rio area was Loyd Overcash, KM5OE, in Houston. In New Braunfels, South Texas Section Manager Ray Taylor, N5NAV, worked with the American Red Cross and the Texas Department of Public Safety to coordinate communication. He also helped pass health-and-welfare traffic for those with family and friends in the flooded areas.

Hams in South Texas were asked August 24 to cooperate by recognizing a voluntary communications emergency and relinquishing frequencies on 40 and 75 meters for emergency and health-and-welfare traffic. The communications emergency was canceled August 27.

From Tad Cook, K7VVV
Seattle, WA August 28, 1998
To all radio amateurs

SB PROP ARL ARLP035
ARLP035 Propagation de K7VVV

Feel the solar wind? This has been a very active week for the geomagnetic field, with solar flares and resulting geomagnetic storms creating lots of excitement. On the day that this was written the planetary A index, which recently has normally been below 10, was at 112, and 39 the day before. Currently a major geomagnetic storm is raging, but conditions are expected to settle down this weekend.

Solar flux was down slightly from last week and the week before, while the average solar flux for the previous ninety days rose from 115 to 117. Solar flux was above these values on every day this week, indicating a general upward trend. A year ago the average solar flux for the week was 78.9, almost fifty points lower than the current level. Average sunspot numbers were about 100 points lower.

On August 24 there was a major proton flare. This caused a major shortwave fadeout, plus continuing geomagnetic disturbances. The flare was big enough to merit reporting in the news wire services. Reuters reported that the aurora may be strong enough to be visible across the United States, not just in the northern latitudes.

Conditions such as this are very bad for HF propagation, but create many interesting VHF contacts via the aurora. K2SMN in New Jersey reported working VE2BKL and VE2PEP in Quebec, WA4HEI in Michigan, and W9JN in Wisconsin, all on two meters.

Look for conditions to calm down this weekend. Solar flux for Friday through Sunday is forecast at 135 for all days, and the planetary A index is predicted to be 30, 15 and 10 over the same period. Solar flux is expected to drop down near 115 for September 1 and 2, then peak around 145 around a week later. There is a strong possibility of recurrent coronal holes causing geomagnetic

disturbances around September 18 and 19.

The author can be contacted via email at tadssc.com, or via packet at K7VVV N7FSP.WA.USA.NOAM.

Sunspot Numbers for August 20 through 26 were 120, 138, 102, 121, 99, 109 and 146 with a mean of 119.3. 10.7 cm flux was 138.6, 132.1, 132.9, 126.4, 121.2, 122.1 and 126.9, with a mean of 128.6, and estimated planetary A indices were 18, 6, 23, 23, 11, 11, and 39, with a mean of 18.7.

>

I'd start with building a little box with a DPDT toggle which isolates the
xformer from the line. Your mother then clicks it on to connect, puts the
phone on hook- then concludes the conversation by turning off the toggle.

I think other posters are right to use a 8:1000 transformer to get
something approximating a matching impedance. The 1k side should put
enough DC load on the phone line to keep it off hook during the
conversation. If not, you could introduce a resistor across the 1k winding
to increase the DC load.

I'd also put a series pot on the 8ohm side to allow you to adjust the
volume going out on the phone line.

All illegal of course...

Gregm

FOR SALE:

ADI AR-146 2M mobile rig
40 memories, 5w/10w/50w
Out of band TX/RX enabled
Hardly used, all boxes and manuals
Just purchased brand new one month ago

$175.00 ships it

CLEGG FM-21 220MHz mobile rig
Crystal controlled, 12 crystal slots
10W out, manual included, no microphone
Current crystals in it are:
223.500 simplex
223.440 simplex
224.340 repeater

$35.00 ships it

$200.00 ships both rigs

If interested contact Dan, KD4OJS
Serious inquiries only!

Call 423-919-6896 or send an e-mail

(I WILL NOT respond to REPLIES in the group)

2496. New Handhelds for 6 Meters and 220 MHz

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-28 00:00:00 UTC
From: ko6ux@adi-radio.com
Message-ID: <6s7902$g51$1@nnrp1.dejanews.com>
Source record: 163410

NEWSFLASH! PR-52 TYPE APPROVED! 8/24/98!

PREMIER Communications Corporation, the makers of the popular ADI line of radios and PREMIER/PRYME lince of accessories, announces a new 6-Meter handheld and a new 1.35 Meter handheld for amateur use.

The new PR-52 (6-Meter Handheld) and the new PR-222 (220 MHz handheld)by PREMIER Communications are super-compact, palm-sized FM talkies with a full 5-watts output. They can put the "Magic Band in Your Hand" or give you "220 on the move."

Both radios are now FCC approved, and should be available for sale in early September from your favorite amateur radio dealer. Call now and reserve yours today!

For more infomation on the PR-52 and the PR-222 see the ADI/PREMIER webpage at <http://www.adi-radio.com/amateur/radios/>.

~PR-52 / PR-222 FEATURES~
Transmit Range: 50-54 MHz (PR-52) / 222-225 (PR-222)
Receive Range: 40-54 MHz (PR-52) / 216-228 (PR-222)
5-watts output with included 12-Volt NiCad battery pack!
MARS capable (permits are required)
Built-in CTCSS encode and decode
40 memory channels store any tone or offset
Direct frequency entry using 16 button keypad
Frequency or channel display modes
PC programmable (with optional software)
Cable cloneable
Palm-sized! Just 4.25" (H) x 2" (W) x 0.75" (D) excluding battery pack!

*****IMPORTANT NOTICE -- PREMIER Communications is MOVING!****
New address and phone numbers are effective 9/15/98!

I find this message quite curious and a bit amusing. Although I didn't agree with it, I thought the sumbission was quite bland. I can't get the connection between removing his(?) name and "you code haters want to destroy ham radio."

Everyone should make submissions about Amateur Radio when requested. Whether anyone else agrees with your point of view is irrelevant.

I think this person had better start taking his anti-paranoia pills again.

Greetings All,

Briefly ABW ++ displays the currently active NCDXF beacon over a topographic map, along with the solar terminator. Tools for setting the system clock are also provided.

ABW ++ will download and display up to five selected Space Environment Center (SEC) solar reports and forecasts. In addition, ABW++ provides the comprehensive SEC glossary of solar terrestrial terms. This glossary

is in windows help format and may be of significant help when interpreting the propagation reports and forecasts.

The ABW++ "Get Time" and "Get Latest Reports" functions make use of an internet connection.

Look for the "Active Beacon Wizard ++" link at the URL below.

A passing motorist wouldn't be offered PAIs because he/ she is no
longer on the scene. If the scene is safe, why not? (Of course, the
determination would have to be made about scene safety)
.

>overly critical.

I've been on these newsgroups only for a short time, but the first thing I've learned is not to get too upset about criticism. If we can come up with some concensus, we may have some workable solutions.

We've been cross-posting from "firefighters", "law enforcement" and "scanners." I am subscribed to the "firefighters" group and I'm sure we're boring the heck out of a lot of the group with this topic. I'll have to subscribe to amateur radio and just continue it there.

A dummy load and a watt meter? Better yet - a service monitor will
simulate the real world quite well for testing power, modulation, etc.

I have two radios set up for "out of band" tx. A modified handheld
makes a great piece of test equipment. Beats the heck out of lugging a
service monitor around if all I need is a signal source for quick
checks.

I think that if I was ever in a situation where I needed urgent
assistance and I was not able to reach another amateur station, I would
NOT try to find a public safety channel to make a call. While it may
only work in coastal regions, my first alternate to amateur freqs would
be 156.800 - an internatonal distress frequency for any mobile station.
The people monitoring that frequency expect to here from "the public".

I carry my handheld with me on my boat. I don't sped much time
"hamming" on the water so it often stays in storage, with my cellphone.
But if my "real" marine VHF radio quit, I like knowing I have a backup
if I really need help. The kinds of things that might make my regular
marine VHF quit are the kind of things that might require a distress
call. I don't use it for routine marine communications, I wouldn't
hesitate for a second using it to send, or even relay, urgent or
distress calls.

I'll also mention my experiences with emergencies... The only times
(twice) I have ever been in a places where radio service was scarce and
I had to call for help, amateur radio was only thing that DID work...
and it was 440MHz that came through both times.

I have done this
underwent a police, state ag, and fcc investigation
there was no cell phone or OTHER phone avail
NO cb avail and was not inrange of a LOCAL REPEATER
and no one else on the hiway when i came upon a wreck
and it was on fire, after i got the people out
i used my ham ht and tuned in to local HIWAY patrol
freq (150 something) and called they answered and told me to clear
the freq until i told them they prob
they then dispathed a unit and a fire unit and a ambulance
took about 3 weeks for all investigations
and they concluded (all agencies) that i did the right thing

Apparently, I am correct about the part of his testicles in a vise.
And I was correct about your 10 Watt ouput? What's the matter, can't figure out how to load an amplifier?
BTW, I wonder, have you ever _heard_me transmit? And, dunce, Technician class operators are allowed to transmit up to 1500 watts PEP output. How does it feel to make a jackass out of yourself in public, Drew?

2532. Anybody built a dual V dipole cir pol 2 M antenna ?

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-28 00:00:00 UTC
From: mlj@airmail.net
Message-ID: <911EB22E14DB2526.1AAE68BC72583E70.20F81CEBAB464A28@library-proxy.airnews.net>
Source record: 163452

I looked at a very interesting circular polorized ,crossed V dipole
antenna at a FM broadcast station (101.X) It consisted of a pair
of crossed V dipoles spaced 1/2 wave apart and rotated 90 dg.
on a single boom sort of fed with a half delta to each dipole,
The printed spec called it a 50 ohm antenna , OMNI pattern and
circular polorization . Great for working mobile receivers in canyons,
downtown areas or any where ghosting is a problem. Antenna
looked simple enough but I am having problems matching the
feed on a home brew version . Any ideas appreciated . Mike

Hello, I have a few questions about the Motorola Syntor XX UHF radio.
I have a model T74VBJ7D04AK

1 What are the specs for this radio (freq range,power,etc)

2 How easy to convert to uhf ham band

3 Channel elements or eproms for freq

4 Any mods to make a uhf repeater

Thanks very much. 73, Mike N0XD

>not a proposal to put a radio on the corner of a desk in a police
>station and letting whoever is near it answer, like many departments
>did with CBs in the '70s.

I worked at a PSAP that served over a million people and for five
years was the ONLY licensed ham operator on staff. Again, how do you
make sure that your PSAP has licensed ham operators on duty 24/7?

>Most communities now have a communications center like this. Please
>see http://www.apcointl.org or http://www.nena.org for information
>about public safety communications. After 17 years as an EMT, then

I've been involved in public safety communications for about 20 years,
and was a member of APCO for a time. I do know what's going on out
there, but relating stuff that happens in progressive locations like
California to my own community is quite a stretch.

>>Why not just have the ham club put up
>>a repeater with an autopatch on it?
>
>Because I, or any other ham, as an itenerant user would not have
>normal access to the patch. We go back to depending on a select few
to
>bring up the patch or act as intermediaries in gathering info. This
is

Or we can mandate, through appropriate regulatory changes, that
repeaters with 9-1-1 autopatches be available 24/7, carrier squelched,
with no special access code beyond the numbers 9-1-1. This does not
mean that we require all repeaters to have them, just that any club or
individual who wants to put up a 9-1-1 connection make it available to
all.

>Next, the patch may time out before the public safety dispatcher has
>an opportunity to receive complete information or while the
dispatcher
>is instructing the amateur caller on lifesaving procedures (emergency
>medical dispatch pre-arrival instructions).

Now YOU may be the one who is surprised to know what is available out there. The autopatches with which I am familiar (RC-850) allow programming of variable timeouts for different types of phone patches. This technology was implemented in my area at least 10 years ago.

>We now can make the caller the FIRST RESPONDER if they are physically
>able and willing to follow simple instructions even if they don't
know
>CPR or first aid. More people are surviving as a result of this where
>they would have died without intervention.

I understand EMD, but don't think it really applies to the typical passing motorist situation. You'd be crazy to give prearrival instructions to someone at the scene of an MVA (or a shooting) who may not have the equipment or capabilities to deal with the larger situation safely. And EMD can be done through a ham autopatch if appropriate.

>Direct communications with a trained public safety telecommunicator/
>dispatcher at a PSAP - ONLY for the purposes of reporting an
emergency
>- is a much better way to go. I believe it would be a tremendous
>increase in the value of amateur radio on the whole (and may save a
>few lives). Maybe something to try on an evaluation basis?!

We had that years ago here in Monroe County, when there was a box on the console at Radio Center and when several of their personnel were hams. Then the City and County merged their dispatch operations, and the box went away. The radio club upgraded to an emergency autopatch on the repeater.

>I have submitted a draft PRM for such possible operation to the
League
>for criticism/ comments. If you'd like to see it, I'll email it to
>you. Should be interesting. I admit this idea is not a conventional
>solution as we have seen in the past. It requires a little thinking
>outside of the box to see the potential.

I would be interested in the proposal. I'm sure it can be explained better in that format. I know how difficult it is to formulate and explain complex ideas and fully develop an argument in a newsgroup, and on that basis apologize if my response to your suggestion is overly critical.

I'm building an interface between the audio output of my laptop computer
and a telephone line.

I know that ringing voltages applied to the audio output will be harmful.
Can someone suggest a few components arranged in a simple protection
circuit that will pass voice-grade audio but block ringing voltage?

Thanks,
Dave

Hey Dimbulb!

Wake up and smell the coffee. I cancled the PSN.NET account over 8 months ago! Why don't you try bouncing some mail off of it and see?

In case you've forgotten, I remember precicely how you tried to drag my name through the mud around here. Now go back to rec.radio.cb where you belong.

Oh yes, I know who you really are now anyway (so don't expect to keep that AOL account too much longer).

Also, take a good look through the recent archives in dejanews. If you haven't guessed it my now, I've been disappearing from the archives.

So, you can crawl back under your rock (or whatever it is you do) and bugger off.

Jeez, this guy is just as bad as John Mackey!

Eric.

The very first time I ever used my current callsign, WK1V, I was at the airport in Phoenix, Arizona. I had just gotten off the phone with my wife and was informed that my new license came in the mail and what my new callsign was.

There are no laws, that I know of, governing the use of amateur radio in airports. The FARs specify operations on scheduled air carriers in IFR flight.

It is still against the law to use those modified radios on public service
frequencies if they are not type accepted or approved. Why can't you get a
commercial radio for those purposes. I have been able to get a Motorola 800
trunk radio for $175 so I can use it on our system. They are not expensive
and would make you legal. Also the ones that are using these modified
"HAM" radios are authorized to be on those frequencies and what we have been
talking about with this thread is someone not authorized to do so....

Hey Rich, if they didn't use CW what did they use to communicate. I'm sure it
wasn't voice! CW= ON_OFF_KEYING which was used with the spark transmitter.

I would like to obtain an early Yaesu VX-1R which has been moded to recieve full 800mhz and extended TX. don't want one someone has done a butcher job on. Doesn't have to be in mint condition just good and work well with good battery. If any one has one send me an e-mail with condition , accessories, mods, version, and price delivered to Old Town, ME 04468

>would never have the opportunity to meet.

Being able to experiment with electronics first-hand.
Being able to test your equipment on-air.
Being able to experiment with propagation conditions that are less than
guaranteed.
Being able to provide public service.
Hearing K3TF ragchew on 40m CW at 45 wpm with KW1C while I was driving
to work today, and realizing that if I jumped in, I wouldn't be imposing.
Working into Australia on 2.5 watts with a mobile whip from my car.
Hearing a signal come out of the kit you just put together.
Making a contact with that same kit you just put together.
Having someone ask you "what's that?"
Going virtually anywhere in the world and feeling like you already have
friends there.
Loaning a piece of gear to someone, and hearing they're making gobs of
contacts with it.
Learning by doing.

Sift through the noise and let's discuss something intelligent.

The solar flux has risen to about 140 of late, but the A and K
indices are insanely high (over 100 and around 6, respectively).

I was unaware of the solar-terrestrial conditions and WOW are
conditions on the air bad!!! I thought there was something
wrong with the radio (this is a common diagnosis, which only
lasted a few seconds this time through)...

Here's to low A & K with high, high, HIGH SF values...

A DPST relay that only gets turned on *after* a call is in
progress would be nearly 100% effective. The phone can't ring while
it's in use.

Tiny relays that work on 5 volts are cheap too.

Jim

Cross-posted to: rec.radio.scanner,alt.law-enforcement,rec.radio.amateur.misc,alt.firefighters

First truly constructive idea on this thread yet. Seems like the ideal situation... emergency autopatch access, no CTSS, etc, no time out, 911 access and only 911 dialing, done automatically, etc.

I think we need some regulatory changes for this to be at it's greatest practicality, though. As it stands now, the repeater owner could be liable for hoaxes. Maybe we need a standard protocol for emergency repeaters, and those complying be held blameless for hoaxes, with sole responsibility resting on the originator of the call.

This would make clubs and individuals less reluctant to set up such a system, and ensure that everyone would know how to get help in a stressful situation in a hurry. When there are lives at stake is no time to be consulting the repeater directory. One or two frequencies per band, a standard shift, etc would enable manufacturers of transcievers to include a "911" button that automatically tries to key up any emergency repeater/autopatch and do whatever must be done under the protocol to connect to a landline 911 dispatcher. Simultaneous pressing of a FN or CTRL key with the 911 key could be a way of preventing accidental use of the system.

Given careful thought on the details, I think a workable universal system could be standardized and implemented that would answer the need for "no matter what" 911 access. Any other thoughts on this?

Hey... beats the hell out of arguing whether or not it is okay to call the sherrif on your HT!

Sorry... CW is not the same as spark... Spark and CW both normally use Morse Code, but CW does not refer to Morse or any other code,,, CW stands for Continuous Wave, a new-fangled mode that used up much less bandwidth than old fashioned Spark. CW and Spark are modes... Morse is just a code used for those modes. Like the difference between English and SSB, or Spanish and FM.

CW does not equal On-Off Keying. Yes, they are closely associated. No, they are not the same thing.

Wanna build a spark transmitter? hook a battery to a file and a piece of wire. scratch the wire across the file. Listen on a nearby radio. Now build a tank circuit and filtering, match this to an antenna, and listen. Check out how wide the signal is. It will be much wider than CW. That is why CW completely replaced Spark.

By the way, the above experiment is strictly illegal if you exceed part 15 power levels, about 100 mw unless I am mistaken, though I suppose you might use such a scheme for an emergency transmission with a car battery or something. Hope this clears the fog.

If you don't need to detect the rings, then use a relay to connect a
600:600 xformer primary to the phone line and pass the secondary thru the
rest of your circuit. When you aren't talking on the line, leave the relay
open. Use a DPDT unit to disconnect both leads of the primary. (Or use a
toggle switch...)

Do you have a design for the rest of your audio front end?

CW does not mean morse code. CW *does* mean continuous wave -- a
narrowband, (nearly) sine-wave, carrier, as opposed to the broad hash of RF
generated by a spark set using damped waves.

You can modulate either CW or spark by morse code keying, but an unmodulated
CW carrier is still CW. In common ham usage today, CW is synonymous with
morse code, but common usage is sometimes kinda sloppy.

Why not connect a small speaker to your computer audio output and place it
near the microphone of a speakerphone. This way your mother can type and
listen to the phone party on the speakerphone.

Get two witnesses and make a complaint to the US Attorneys
office for your US District court. It would be like filing a complaint
at the county level with the prosecutor. The US Attorney could
then file it with the FCC. Send a copy of your statement to your
Congressman. Congressmen can not act on a complaint unless
it is in writing. They have a recruitment to respond within 24 hours.
That also gets the FCC going.

The city attorney here went to our congressman about a CBer. We
are getting FCC support.

>you out.

It does not matter how many people hear you. If you are talking to
one person, everyone else will assume it is being dealt with.

If you want to test the reliability of people to help you when you
are in trouble, try putting your head out of a window and start
screaming. You can expect to be completely ignored, and if
not you will be told to shut up and stop making so much noise.

>This goes for a repeater autopatch, just the same.

>A cell phone, however, is much different, as only the party you're calling
>and a few people with illegally modified scanners can hear you.

With a cell phone you will choose who you talk to, and make the
call count. Most people can remember 911 or whatever.

John

Dunno about that rig, but sounds like a different problem, maybe power supply related. Usually in most rigs the btty only is used to store the memorys,computer functions etc. Seems to me if the btty went bad you would not get a normal startup at all. The readouts would be gibberish, lost memories, etc. That is seems to start ok and then bombs seems to point to another problem. MK

>RS is most certainly no charity, it's a business that makes money of their
>advertisement.

Advertisement? Those catalogs are produced for the benefit of the
salespeople. It is a reference guide and a training tool. RadioShack is kind
enough to provide them to customers that also find them helpful.

>We don't have to have any pity with RS that it costs them
>money to print the catalogs, they sure earn it back. If this type of
>advertisement would not be cost effective to them then they would not have
>catalogs.

The monthly mailout that is targeted to customers who volunteer their names
and addresses are significantly more effective advertising than the catalog.
A few years back the elimination of the RadioShack catalog was discussed.
Instead someone thought of the idea of selling the catalog on newstands (I
noticed that they were for sale at Wal-Mart). This is when RadioShack
started selling the catalog. The first year the catalog had coupons in it to
compensate for the customer's investment. The first year (four years ago)
was the only year that RadioShack charged for the catalog at the RadioShack
store. After that they have a policy that the exchange of name and address
information for the mailing list was a fair price for the catalog.

>I guess it's as with many things that we've become to accept these
>things and think it's normal. It's like telemarketers who call collect, I
>guess one day we'll think that's normal too. If they would use the money to
>plant trees that had to come down to make the catalog, then I would be
>willing to pay.

Use what money to plant trees? The money that they earn from the sale of the
catalogs? They don't make any money directly from the sale of catalogs. In
fact the costs of the catalog are a lot greater than the profits made from
selling them even if everyone produced were purchased. If you are concerned
for our environment then take your old NiCd batteries to them to be
recycled.

Do you like jail? Thats where you will end up if they catch you transmitting on a public service band like the police. We have seen a bit of this in Houston at times. But doesn't last very long. If you feel the need to contact the police that strongly I suggest a cell phone. I know a guy that is a future police officer that passed the police acadamy etc. He got caught with a police radio in his car. He DID NOT USE IT. He just happened to have one that would operate police freqs with a ham mod in it. He did not pass go or collect 200$. He went to jail. And I don't think he deserved it at all, but thats another story. The bottom line is the police take a very dim view of jamming or using their frequencies. If you get caught with a radio that can access police frequencies expect to go to jail. For a while anyway. MK

JAIL just for having it, NOT not even in texas
there is more to this story than meets the eyes
YOU CAN LISTEN TO ANYTHING YOU WANT
you just cannot transmitt on a lot of them UNLESS your authorized
the only exception i know to this is some cell frequencies
don
